

Low Power Dual Voltage Comparators

LM393

General Description

The LM393 series consists of two independent precision voltage comparators with an offset voltage specification as low as 2mV. It can operate from a single supply or dual supply, and its current is not affected by the magnitude of the supply voltage. These comparators also have a unique characteristic in that the input common-mode voltage range includes ground even though operated from a single power supply voltage.

The LM393 series are available in 2 Packages:
DIP-8 and SOP-8.

Features

- Wide Supply Voltage Range
 - Single Supply: 2.0V to 36V
 - Dual Supplies: $\pm 1.0V$ to $\pm 18V$
- Very Low Supply Current Drain: 0.8mA
 - Independent of Supply Voltage
- Low Input Bias Current: 25nA (Typical)
- Low Input Offset Current: $\pm 5nA$ (Typical)
- Low Input Offset Voltage: $\pm 5mV$ (Typical)
- Differential input voltage range equal to the supply voltage
- TTL, DTL, ECL, MOS, CMOS compatible outputs
