

# High Power PoE Signal Path Magnetics

### **Isolation Transformer**

Part	Inductance <sup>2</sup>	DCR max <sup>3</sup>	Isolation <sup>4</sup>	Irms⁵
number <sup>1</sup>	(µH)	(Ohms)	(Vrms)	(A)
HPX2126	850	0.24	1500	19

1. When ordering, please specify **packaging** code:

HPX2126LD

- Packaging: D = 13" machine-ready reel. EIA-481 embossed plastic tape (300 parts per full reel).
  - B = Less than full reel. In tape, but not machine ready. To have a leader and trailer added (\$25 charge), use code letter D instead.
- 2. Inductance measured at 100 kHz, 0.1 Vrms, 0 Adc.
- 3. DCR is for each winding.
- 4. Isolation is measured from primary to secondary of each transformer.
- Current flowing through each secondary that causes a 20°C temperature rise from 25°C ambient
- 6. Electrical specifications at 25°C.

Refer to Doc 362 "Soldering Surface Mount Components" before soldering.

- Meets the current requirements of Gigabit PoE Plus.
- Open circuit inductance is  ${\geq}350~\mu H$  with a 22.5 mA dc offset

#### Core material Ferrite

**Terminations** RoHS Tin-silver-copper over tin over nickel over phos bronze. Other terminations available at additional cost.

Weight HPF2187L: 240 mg; HPX2126L: 3.9 g

Ambient temperature -40°C to +85°C

**Storage temperature** Component: -40°C to +85°C. Tape and reel packaging: -40°C to +80°C

Resistance to soldering heat Max three 40 second reflows at +260°C, parts cooled to room temperature between cycles Moisture Sensitivity Level (MSL) 1 (unlimited floor life at <30°C / 85% relative humidity)

Failures in Time (FIT) / Mean Time Between Failures (MTBF) 38 per billion hours / 26,315,789 hours, calculated per Telcordia SR-332 Packaging

HPF2187L: 500/7" reel; 2000/13" reel; Plastic tape: 16 mm wide, 0.35 mm thick, 8 mm pocket spacing, 4.4 mm pocket depth HPX2126L: 300/13" reel; Plastic tape: 32 mm wide, 0.5 mm thick, 20 mm pocket spacing, 11 mm pocket depth

**PCB washing** Tested to MIL-STD-202 Method 215 plus an additional aqueous wash. See Doc787\_PCB\_Washing.pdf.

### **Common Mode Choke**

Part	Inductance <sup>2</sup>	DCR max <sup>3</sup>	
number <sup>1</sup>	(µH)	(Ohms)	
HPF2187L	10.0	0.15	

1. When ordering, please specify packaging code:

#### HPF2187LĊ

- Packaging: C = 7" machine-ready reel. EIA-481 embossed plastic tape (500 parts per full reel).
  - B = Less than full reel. In tape, but not machine ready. To have a leader and trailer added (\$25 charge), use code letter C instead.
  - D = 13" machine-ready reel. EIA-481 embossed plastic tape. Factory order only, not stocked (2000 parts per full reel).
- 2. Inductance measured at 100 kHz, 0.1 Vrms, 0 Adc.
- 3. DCR is for each winding.

4. Electrical specifications at 25°C.

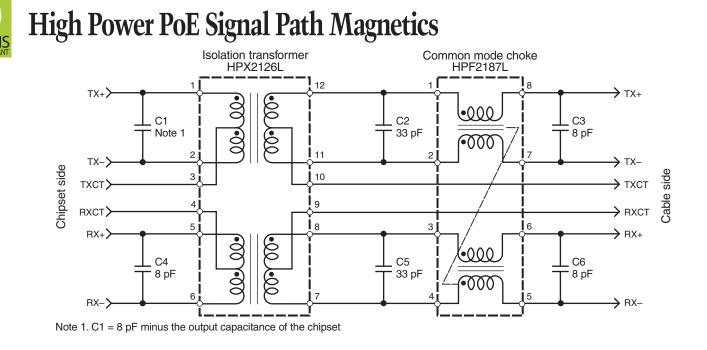

Refer to Doc 362 "Soldering Surface Mount Components" before soldering.

# **High Power PoE Signal Path Magnetics**

#### Description

Coilcraft's signal path magnetics meet the current requirements of Gigabit Ethernet PoE Plus. The open circuit inductance is  $\geq$ 350 µH with a 38 mA dc offset applied from 0°C to 70°C. It can handle 3.8 A of injected current.

The system comprises an isolation transformer, a common mode choke and six capacitors. The capacitor across the primary of the isolation transformer on the TX side tunes the circuit by matching the output capacitance of the chipset allowing these components to be used with virtually all chipsets.

The two isolation transformers are placed in a single package (HPX2126L) and both common mode chokes in an even smaller package (HPF2187L). Both packages fit easily behind a standard Ethernet jack.

#### Testing

A matching network is used to perform the testing for return loss, insertion loss, crosstalk, common mode to common mode rejection and differential to common mode rejection. The network matches the 50 Ohm single ended connection of network analyzers to 100 Ohm differential balanced lines. A 1:1 balun is used with a resistive network to transform the impedance. The network is then calibrated out of the measurement by using open, short, load calibration techniques. The circuit is then placed behind the matching network for each of the tests. All tests are performed on an Agilent/HP 8753ES network analyzer.

For return loss, the chip side of the component is loaded with 100 Ohms and the cable side of the system is tested using the matching network.

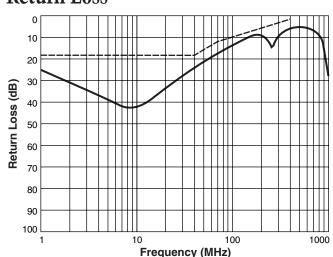

For insertion loss, the fixture used for the return loss is altered to replace the 100 Ohm load with a matching network for the output port of the network analyzer.

For common mode to common mode rejection, TX+ and TX- (or RX+ and RX-), depending on the side of the system) is tied together and an S21 measurement is taken from chip side to cable side.

For differential to common mode rejection, the chip side of the system is excited by the network analyzer through the matching network. The measurement is taken by looking at the balance between two 50 Ohm loads across the cable side of the system.

For crosstalk, the chip side TX is excited by the network analyzer through the matching network. The center-tap on the chip side of each isolation transformer is grounded, and the chip side RX is measured. The cable side of both RX and TX is externally loaded 100 Ohms.
