DC Power Supplies

## SPECIFICATIONS

Ac Input
90-264 Vac, 47-63 Hz single phase..

## Input Current

Maximum input current at $120 \mathrm{Vac}, 60 \mathrm{~Hz}$ with full rated output load: 1.5 A

## Hold-Up Time

15 ms minimum from loss of ac input at full load, nominal line (115 Vac).

## Output Power

50 W continuous, 60 W peak. Peak ratings are for 60 s maximum duration, $10 \%$ duty cycle. During peak load condition, output regulation may exceed total regulation limits.

## Output Regulation

To maintain specified regulation on multi-output models, output \#1 load power must be at least $1 / 5$ th of, and not greater than 5 times output \#2 load power.
Overload Protection
Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit on outputs $1 \& 2$; foldback type on output 3. Recovery after fault is automatic. See output ratings chart for additional notes or conditions.

## Efficiency

$70-85 \%$ at full rated load, nominal input voltage, depending on model and load distribution.

## Minimum Load

Operating without minimum load will not degrade reliability, but regulation may be affected. Multiple output models require $20 \%$ minimum load on V1 for proper regulation. Single models require $5 \%$ minimum load when a transient load greater than $30 \%$ is applied or removed, but will operate without load.

Input Protection
Internal ac fuse provided. Designed to blow only if a catastrophic failure occurs in the unit-fuse does not blow on overload or short circuit.

Inrush is limited by internal thermistors. Inrush at 240 Vac, averaged over the first ac half-cycle under cold start conditions will not exceed 37 A .

## Temperature Coefficient <br> $0.03 \% /{ }^{\circ} \mathrm{C}$ typical on all outputs.

## Output Noise

$0.5 \% \mathrm{rms}, 1 \% \mathrm{pk}-\mathrm{pk}, 20 \mathrm{MHz}$ bandwidth, differential mode. Measured with noise probe directly across output terminals of the power supply.
Transient Response
$500 \mu$ s typical response time for return to within $0.5 \%$ of final value for a $50 \%$ load step change. $\Delta \mathrm{i} / \Delta \mathrm{t}<0.2 \mathrm{~A} / \mu \mathrm{s}$. Maximum voltage deviation is $3.5 \%$. Startup/shutdown overshoot less than 3\%.

Voltage Adjustment
Built-in potentiometer adjusts V1 $\pm 5 \%$.
EMI/EMC Compliance
All models include built-in EMI filtering to meet the following emissions requirements:

| EMI SPECIFICATIONS | COMPLIANCE LEVEL |

Notes:
A. Total regulation is defined as the maximum deviation from the nominal voltage for all steady-state conditions of initial voltage setting, input line voltage and output load. B. To maintain specified regulation on multi-output models, output \#1 load power must be at least $1 / 5$ th of, and not greater than 5 times output \#2 load power.
C. Add "G" suffix to model number for RoHS compliant model.
