## PERFORMANCE MEDICAL SWITCHERS

## FEATURES:

- Wide-range ac input 85-264 Vac
- 2-year warranty
- Conducted EMI exceeds FCC Class B and CISPR 22 Class B (Commercial models) and CISPR 11 Class B (Medical models)
- Commercial Approved to UL1950, IEC950, EN60950 and CSA22.2-234 L3
- Medical Approved to UL2601-1, IEC601-1 and CSA22.2 No. 601.1
- Complies with EN61000-3-2 Class A
- RoHS Compliant Model Available (G suffix)

## 

## SPECIFICATIONS

## Ac Input

85-264 Vac, $47-63 \mathrm{~Hz}$ single phase.
Input Current
Maximum input current at $120 \mathrm{Vac}, 60 \mathrm{~Hz}$ with full rated output load: 2.3 A
Hold-Up Time
20 ms minimum from loss of ac input at full load, nominal line (115 Vac).

## Output Power

80 W continuous, 110 W with air flow. Peak ratings are for 60 s maximum duration, $10 \%$ duty cycle. During peak load condition, output regulation may exceed total regulation limits.

Overload Protection
Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit on outputs $1 \& 2$; foldback type on outputs 3 \& 4. Recovery after fault is automatic. Factory set to begin power limiting at 120 W . See output ratings chart for additional notes or conditions.
Overvoltage Protection
Main outputs: $124 \% \pm 12 \%$ typical.

## Efficiency

$70 \%$ at full rated load, nominal input voltage, depending on model and load distribution.
Input Protection
Internal ac fuse provided. Designed to blow only if a catastrophic failure occurs in the unit.

## Inrush Current

Inrush is limited by internal thermistors. Inrush at 240 Vac under cold start conditions will not exceed 34 A .

Temperature Coefficient $0.03 \% /{ }^{\circ} \mathrm{C}$ typical on all outputs.

## Environmental

Designed for 0 to $50^{\circ} \mathrm{C}$ operation at full rated output power; derate output current and total output power by $2.5 \%$ per ${ }^{\circ} \mathrm{C}$ above $50^{\circ} \mathrm{C}$. See Environmental and Packaging Specifications on next page.

## Power Fail (optional)

TTL- or CMOS-compatible output goes low ( $<0.5 \mathrm{~V}$ ) 5 ms before output voltage drops more than $4 \%$ below nominal voltage upon loss of ac power. The signal is factory set to trip on 84 to 94 Vac brown-out depending upon incoming line impedance and distortion. Other settings are available to the user through adjustment of built-in potentiometer (consult factory for assistance). For Power fail option, add -PF after model number.

## Output Noise

$0.5 \% \mathrm{rms}, 1 \% \mathrm{pk}-\mathrm{pk}, 20 \mathrm{MHz}$ bandwidth, differential mode. Measured with noise probe directly across output terminals of the power supply.

Transient Response
Main output-500 $\mu$ s typical response time for return to within $0.5 \%$ of final value for a $50 \%$ load step change. $\Delta \mathrm{i} / \Delta \mathrm{t}<0.2 \mathrm{~A} / \mu \mathrm{s}$. Maximum voltage deviation is $3.5 \%$. Startup/shutdown overshoot less than 3\%.

Remote Sense
Provided as a standard feature on single-output models.
Voltage Adjustment
Built-in potentiometer adjusts voltage $\pm 5 \%$ on outputs $1 \& 2$.
EMI/EMC Compliance
All models include built-in EMI filtering to meet the following emissions requirements:

## EMI SPECIFICATIONS

Conducted Emissions GPC80
Conducted Emissions GPM80
Static Discharge
RF Field Susceptibility
Fast Transients/Bursts
Surge Susceptibility
Line Frequency Harmonics
Commercial Leakage Current
0.7 mA 254 Vac @ 60 Hz input.

## Commercial Safety

Approved to UL1950, CSA22.2 No. 234 Level 3, IEC950 and EN60950. UL file \#E135803 commercial; CSA \#LR46516 all. The output(s) are intended for safety earthed Signal Output and Intermediate Circuits only. All dc outputs are SELV under normal and single fault conditions.

Medical Leakage Current
$35 \mu \mathrm{~A} 254 \mathrm{Vac}$ @ 60 Hz input.
Medical Commercial Safety
Approved to UL2601-1, CSA-C22.2 No. 601.1 Level 3 and IEC601.1. UL file E116994; CSA \#LR46516. The output(s) are intended for safety earthed Signal Output and Intermediate Circuits only. The output(s) are not acceptable for patient connection without additional isolation. All dc outputs are SELV under normal and single fault conditions.

* Add "G" suffix to part number for RoHS compliant model. Contact factory for availability.
A. Total regulation is defined as the maximum deviation from the nominal voltage for all steady-state conditions of initial voltage setting, input line voltage and output load.
B. Ratings for unrestricted natural convection cooling; output $1 \& 2$ combined load not to exceed 14 A continuous; total power $=80 \mathrm{~W}$.
C. Ratings with 26 cfm forced air cooling; output $1 \& 2$ combined load not to exceed 16A continuous; total power = 110W.
D. To maintain these regulation conditions, the +5 V current must be at least $1 / 4$ of V 2 and not greater than 5 times the V 2 current. Requires +5 V to be adjusted within $\pm 1 \%$ with at least a 1 A load to maintain regulation on this input.
E. For Power Fail option, add -PF after the model number.
