- *1 This is the result of measurement of the testing board with capacitors of 22 μ F and 0.1 μ F placed at 150 mm from the output terminals by a 20 MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-Giken RM103. See 1.6 of Instruction Manual for more details. SPECIFICATIONS

OTHERS	CASE SIZE/WEIGHT	178×61×268mm [7.01×2.40×10.55 inches] (Excluding terminal block and screw) (W×H×D) / 3.5kg max
	COOLING METHOD	*6 Forced cooling (internal fan)
WARRANTY	WARRANTY	*7 5 years (subject to the operating conditions)

- *1 This is the result of measurement of the testing board with capacitors of 22 μ F and 0.1 μ F placed at 150 mm from the output terminals by a 20 MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-Giken RM103.
See 1.6 of Instruction Manual for more details.
- *2 Consult us about dynamic load and input response.
- *3 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C.
- *4 Output power derating is required. Refer to "Derating".
- *5 Consult us about other classes.
- *6 The fan speed slows down or stops at no load.
- *7 See 4 in Instruction Manual for more details.
- *8 Consult us about safety agency approvals for the models with optional functions.
- * Do not use the power supply in overcurrent conditions or in unspecified input voltage ranges. Otherwise the internal components may be damaged.
- * Parallel operation is not possible with this mode.
- * Audible noise may be heard from the power supply when used for pulse load.

Features

- Cost-effective
- Longer life (see Instruction Manual)
- Low profile (meets 2U height = 61 mm or 2.4 inches)
- Wide operating temperature range (-20°C to +70°C Refer to "Derating")
- Stop or slow fan speed at no load

The external size of -V option, -W option and -R option models is different from the standard model. See "6. Options and Others" in Instruction Manual for more details.

Assembling and Installation Method

- Do not insert a screw more than 6mm from the outside of a power supply to keep enough insulation distance between the screw and internal components.

PJA100F, PJA150F

- If you use two or more power supplies side by side, please keep a sufficient distance between them to allow enough air ventilation.
- Ambient temperature around each power supply should not exceed the temperature range shown in "derating".

PJA300F

PJA600F

PJA1000F, PJA1500F

Assembling and Installation Method

- When mounting the power supply with screws, it is recommended that this be done as shown above . If other methods are used, be sure the weight of the power supply is taken into account.
- Avoid the not allowed installation method as it gives excessive stress to the mounting holes.
- Do not block air flow of the built-in fan (terminal block and ventilation hole).
- If the power supply is used in a dusty environment, use an airfilter. Make sure air flow is not blocked.
- If the built-in fan stops, thermal protection will work and the output will stop.
- The life expectancy (R(t)=90%) of the built-in fan varies depending on the operating condition.

Derating

● Input voltage Derating Curve

● PJA100F/150F-12,15 Ambient temperature Derating Curve (Reference value)

● PJA100F/150F-24,36,48 Ambient temperature Derating Curve (Reference value)

- In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
- The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply. Please consult us for more details.
- Make sure the temperature at point A and point B is less than the temperatures shown in Instruction Manual 3.

● PJA300F Ambient temperature Derating Curve

● PJA600F/1000F/1500F Ambient temperature Derating Curve

- The ambient temperature is defined as the temperature of the air (at the terminal block side) that the built-in cooling fan blows into the power supply. Please pay attention to the heat generated by the input and output wires. Please consult us for more details.
