WARRANTY	WARRANTY	*7 5 years (subject to the operating conditions)

*1 This is the result of measurement of the testing board with capacitors of 22 μ F and 0.1 μ F placed at 150 mm from the output terminals by a 20 MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-Giken RM103.
See 1.6 of Instruction Manual for more details.

*2 Consult us about dynamic load and input response.

*3 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C.

*4 Output power derating is required. Refer to "Derating".

*5 Consult us about other classes.

*6 The fan speed slows down or stops at no load.

*7 See 3 in Instruction Manual for more details.

*8 Consult us about safety agency approvals for the models with optional functions.

* Do not use the power supply in overcurrent conditions or in unspecified input voltage ranges. Otherwise the internal components may be damaged.

* Parallel operation is not possible with this mode.

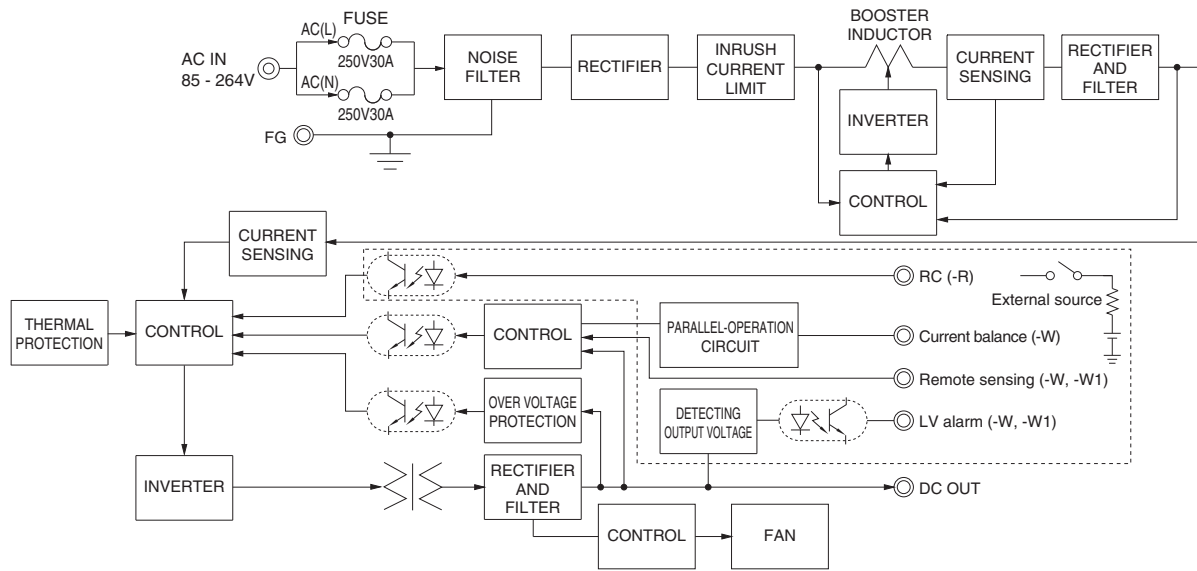

* Audible noise may be heard from the power supply when used for pulse load.

Assembling and Installation Method

- Do not insert a screw more than 6mm from the outside of a power supply to keep enough insulation distance between the screw and internal components.

PJMA300F

PJMA600F

PJMA1000F, PJMA1500F

Assembling and Installation Method

- When mounting the power supply with screws, it is recommended that this be done as shown above. If other methods are used, be sure the weight of the power supply is taken into account.
- Avoid the not allowed installation method as it gives excessive stress to the mounting holes.
- Do not block air flow of the built-in fan (terminal block and ventilation hole).
- If the power supply is used in a dusty environment, use an airfilter. Make sure air flow is not blocked.
- If the built-in fan stops, thermal protection will work and the output will stop.
- The life expectancy (R(t)=90%) of the built-in fan varies depending on the operating condition.

Derating

● Input voltage Derating Curve

● Ambient temperature Derating Curve

- In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
- The ambient temperature is defined as the temperature of the air (at the terminal block side) that the built-in cooling fan blows into the power supply. Please pay attention to the heat generated by the input and output wires. Please consult us for more details.
