## 36V, Precision

## Low-Power Instrumentation Amplifier

## Features

- Low Offset Voltage: $50 \mu \mathrm{~V}$ (Max.)
- Low Drift: $0.2 \mu \mathrm{~V} /{ }^{\circ} \mathrm{C}$
- Low Input Bias Current: 2nA (Max.)
- Gain Bandwidth Product: 1.5 MHz
- Slew Rate: $1.0 \mathrm{~V} / \mu \mathrm{s}$
- Wide Supply Range: $\pm 2.25 \mathrm{~V} \sim \pm 18 \mathrm{~V}$
- Low Quiescent Current: 1.0mA
- Unity Gain Stable
- Input Over-Voltage Protection
- Extended Temperature Ranges From $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
- Available as SOP8/MSOP8/DIP8

## Applications

- Medical Instrumentation
- RTD Sensor Amplifier
- Data Acquisition
- Thermocouple Amplifier
- Bridge Amplifier

## General Description

COS128 and COS129 are low-power, general purpose instrumentation amplifiers offering excellent accuracy. The versatile 3-op amp design and small size make these amplifiers ideal for a wide range of applications. A single external resistor sets any gain from 1 to 10,000.

COS128 and COS129 are laser-trimmed for very low offset voltage $(50 \mu \mathrm{~V})$, drift $\left(0.2 \mu \mathrm{~V} /{ }^{\circ} \mathrm{C}\right)$ and high common mode rejection. They operate with power supplies as low as $\pm 2.25$. The quiescent current is only 1.0 mA , ideal for battery-operated systems. COS128/129 are available in 8-pin plastic SOP8, DIP8 and MSOP8 packages, specified for the $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ temperature range.

## 1. Pin Configuration and Functions

## 2. Product Specification

### 2.1 Absolute Maximum Ratings ${ }^{(1,2)}$

| Parameter | Rating | Units |
| :--- | :---: | :---: |
| Power Supply: +Vs to -Vs | 36 | V |
| Differential Input Voltage Range | $\pm 36$ | V |
| Common Mode Input voltage Range ${ }^{(2)}$ | -Vs to +Vs | V |
| Output Current | 50 | mA |
| Storage Temperature Range | -65 to 150 | ${ }^{\circ}{ }^{\circ} \mathrm{C}$ |
| Junction Temperature | 150 | ${ }^{\circ} \mathrm{C}$ |
| Operating Temperature Range | -40 to 125 | ${ }^{\circ} \mathrm{C}$ |
| ESD Susceptibility, HBM | 2000 | V |

(1) Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.
(2) Input terminals are diode-clamped to the power-supply rails. Input signals that can swing more than 0.5 V beyond the supply rails should be current-limited to 10 mA or less.

### 3.0 Application Notes

### 3.1 Overview

The COS128/129 instrumentation amplifiers are differential amplifier that has been outfitted with input protection circuit and input buffer amplifiers, which eliminate the need for input impedance matching and make the amplifier particularly suitable for use in measurement and test equipment. Additional characteristics of the COS128/129 include a very low DC offset, low drift, low noise, very high open-loop gain, very high common-mode rejection ratio, and very high input impedance.

### 3.2 Application Information

COS128/129 measure small differential voltage with high common-mode voltage developed between the noninverting and inverting input. The ability to set the reference pin to adjust the functionality of the output signal offers additional flexibility that is practical for multiple configurations.

COS128

Figure 3.1 shows the basic connections required for operation of the COS128/129. Applications with noisy or high impedance power supplies may require decoupling capacitors close to the device pins as shown. This must be a low-impedance connection to assure good common-mode rejection. A resistance of $8 \Omega$ in series with the REF pin will cause a typical device to degrade to approximately 80dB CMR.

Figure 3.1 Functional Block Diagram

Gain is set by connecting a single external resistor, $\mathrm{R}_{\mathrm{G}}$, between pins 1 and 8 :

$$
\begin{array}{rlr}
\mathrm{G} & =1+2^{*} \mathrm{R} 1 / \mathrm{R}_{\mathrm{G}} & \\
& =1+50 \mathrm{k} \Omega / \mathrm{R}_{\mathrm{G}} & \text { for } \cos 128 \\
& =1+49.4 \mathrm{k} \Omega / \mathrm{R}_{\mathrm{G}} & \text { for } \cos 129
\end{array}
$$

Commonly used gains and resistor values are shown in Table 3.1.
