## NOTES

## RoHS Compliance

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree LED representative or from the Product Ecology section of the Cree LED website.

## Vision Advisory

WARNING: Do not look at an exposed lamp in operation. Eye injury can result.

## KIT NUMBER SYSTEM

Cree LED lamps are tested and sorted into performance bins. A bin is specified by ranges of color, forward voltage, and brightness. Sorted LEDs are packaged for shipping in various convenient options.

Cree LEDs are sold by order codes in combinations of bins called kits. Order codes are configured in the following manner:

## SOLDERING GUIDELINES

The LED soldering specification is shown below(suitable for both leaded solder \& lead-free solder):

| Manual Soldering |  | Solder Dipping |  |
| :--- | :--- | :--- | :--- |
| Soldering iron | 35 W max | Preheat | Preheat time |
| Temperature | $300^{\circ} \mathrm{C}$ max | Solder-bath temperature | $260^{\circ} \mathrm{C}$ Max |
| Soldering time | 3 seconds max | Dipping time | $50^{\circ} \mathrm{max}$ |
| Position | Not less than 3 mm from the base of the package. | Position | Not less than 3 mm from the base of the package. |

- Manual soldering onto the PCB is not recommended because soldering time is uncontrollable.
- The recommended wave soldering is as below:

- Do not apply any stress to the LED package, particularly when heated.
- Only bottom preheat is suggested \& should not preheat on top in order to reduce thermal stress experienced by the LEDs.
- The LEDs must not be re used once they have been extracted from PCB.
- After soldering the LEDs, the package should be protected from mechanical shock or vibration until the LEDs have reached $40^{\circ} \mathrm{C}$ or below.
- Precautions must be taken as mechanical stress on the LEDs may be caused by PCB warpage or from the clinching and cutting of the LED leads.
- When it is necessary to clam the LEDs during soldering, it is important to ensure no mechanical stress is exerted on the LEDs.
- Cut the LED lead at normal room temperature. Lead cutting at high temperature may cause failure of the LEDs.
- Please refer to the HB LED Lamp Soldering \& Handling document for information about how to use this LED product safely.

## PACKAGING

- The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- Cardboard boxes will be used to protect the LEDs from mechanical shock during transportation.
- The boxes are not water resistant, and they must be kept away from water and moisture.
- Max 500 pcs per bulk and Max 2500 pcs per ammo.
