DIN Rail Mount 17.5 mm MUS/MUSF 80 AC/DC Part number 84872141

- Control relays monitoring their own power supply
- MUS : Over/undervoltage control

Selectable latching (memory) function

- MUSF : Over/undervoltage control
- Adjustable time delays
- Control in $50 \mathrm{~Hz}, 60 \mathrm{~Hz}$ or DC
- True RMS measurement
- LED status indication

Specifications
Supply

| Polarity with DC voltage | - |

The under or overvoltage threshold value is set by a graduated potentiometer by reading the Un scale to be monitored directly.
The hysteresis is set by a graduated potentiometer from 5 to $20 \%$ of the preset threshold. The hysteresis value cannot be higher than the extremes of the measurement range.
In overvoltage mode, if the controlled voltage exceeds the preset threshold for longer than the time set on the front face ( 0.1 to 10 s ), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.
Once the voltage falls below the threshold value minus the hysteresis, the relay closes instantaneously.
In undervoltage mode, if the controlled voltage falls below the preset threshold for longer than the time set on the front face ( 0.1 to 10 s ), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.
Once the voltage rises above the threshold value plus the hysteresis, the relay closes instantaneously.

If "with memory" mode has been selected, the relay opens and stays in this position when threshold crossing is detected. The power supply must be disconnected to reset the product.

MUSF relays operate in window mode : they check that the controlled voltage stays between a minimum and maximum threshold.
The under and overvoltage threshold values are set by two graduated potentiometers by reading the Un scale to be monitored directly.
The hysteresis is fixed, value : $3 \%$ of the preset thresholds.
If the controlled voltage exceeds the preset upper threshold, or falls below the preset lower threshold for longer than the time set on the front face ( 0.1 to 10 s ), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.
Once the voltage returns to below the upper threshold value minus the hysteresis, or above the lower threshold value plus the hysteresis, the relay closes instantaneously
When the unit is powered up with a measured fault, the relay stays open.

Product adaptations

- Fixed threshold in the generic measurement range
- Fixed or adjustable time delay
- Adjustable hysteresis

Adaptations dedicated to MUS 12 DC, MUS 80 AC, MUS 260 AC :

- Possible to delete settings
- Adjustable fixed hysteresis
