1. At rated voltage, after 3 minutes. Notes:

2. At rated voltage, room temperature, 65% humidity, 0 inch H₂0 static pressure. 3. At rated voltage, 0 CFM airflow.

Measured in an anechoic chamber as per ISO3745/GB4214-84 at rated voltage, with background noise 20±2 dBA at 1 m from the fan intake.
 Typical rated speed is measured as RPM±300 at rated voltage.

6. All specifications are measured at 25°C, 65% relative humidity unless otherwise specified.

APPLICATION NOTES

Auto Restart Protection

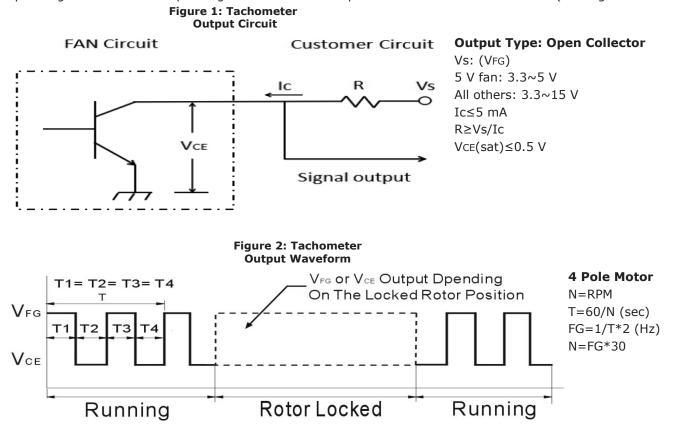

When the fan motor is locked by an external force, the device will temporarily turn off electrical power to the motor and restart automatically when the locked rotor condition is released.

Polarity Protection

Able to withstand 10 minutes of reverse polarity connection between the positive and negative wires without causing damage.

Tachometer Signal (Yellow Wire)

The tachometer signal is for detecting the rotational speed of the fan motor. The output will be a square wave when fan is operating and VFG or VCE depending on the locked rotor position when fan motor is locked (See Figures 1~2 below).

Soft Start

When the fan power is on, the current will increase slowly (~15 seconds) until the fan reaches the rated speed.
