RECOMMENDED INTERFACE CIRCUIT

Stereo Output I2S Format

Mono Output I2S Format Left Channel (L/R=0)

Mono Output I2S Format Right Channel (L/R=1)

I²S DATA INTERFACE

The serial data is in slave mode I²S format, which has 24-bit depth in a 32 bit word. In a stereo frame there are 64 SCK cycles, or 32 SCK cycles per data-word. When L/R=0, the output data in the left channel, while L/R=Vdd, data in the right channel. The output data pin (SD) is tri-stated after the LSB is output so that another microphone can drive the common data line.

DATA WORD LENGTH

The output data-word length is 24 bits per channel. The Mic must always have 64 clock cycles for every stereo data-word(f_{SCK}=64 x f_{WS}).

DATA WORD FORMAT

The default data format is I²S, MSB-first. In this format, the MSB of each word delayed by one SCK cycle from the start of each half-frame.

| TERMINAL CONNECTIONS			
TERM.	SYM	FUNCTION	DESCRIPTION
1	VDD	power	1.8 to 3.3 V. This pin should be decoupled to Pin 3 with a 0.1 µF capacitor and a 10 µF capacitor.
2	SCK	input	Serial Data Clock for I²S Interface.
3	GND	ground	Connect to ground on the PCB.
4	L/R	input	Left/Right Channel Select. When set low, the microphone outputs its signal in the left channel of the I²S frame; when set high, the microphone outputs its signal in the right.
5	WS	input	Serial Data-Word Select for I²S Interface.
6	SD	output	Serial Data Output for I²S Interface. This pin tristates when not actively driving the appropriate output channel. The SD trace should have a 100 kΩ pull-down resistor to discharge the line during the time that all microphones on the bus have tristated their outputs.

SOLDERABILITY

parameter	conditions/description	min	typ	max	units
reflow soldering[2]	see reflow profile			260	°C

Note: 2. Not recommnended to exceed 3 reflow cycles.
HANDLING RECOMMENDATIONS

1.   Not recommnended to blow air heavily over acoustic port as debris could impact mic function.

2.   Not suitable for wash process after reflow.

3.   Not recommended to brush board with or without solvents after reflow process.

4.   Not recommended to directly expose to ultrasonic processing or cleaning.

5.   Not recommended to inserty any object in port of device at any time.

6.   Not recommended to apply over 30 psi of air pressure into the port hole.

7.   Not recommended to pull a vacuum over port hole.

8.   Not recommended to apply a vacuum when repackaging into sealed bag a rate faster than 0.5 atm/sec.

9.   Not recommended to clean table or carried plate with air guarding system that could induce particle floating inside mic.
