

**Please note that Cypress is an Infineon Technologies Company.**

The document following this cover page is marked as “Cypress” document as this is the company that originally developed the product. Please note that Infineon will continue to offer the product to new and existing customers as part of the Infineon product portfolio.

**Continuity of document content**

The fact that Infineon offers the following product as part of the Infineon product portfolio does not lead to any changes to this document. Future revisions will occur when appropriate, and any changes will be set out on the document history page.

**Continuity of ordering part numbers**

Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

## General Description

PSoC® 4 is a scalable and reconfigurable platform architecture for a family of programmable embedded system controllers with an Arm® Cortex®-M0+ CPU. It combines programmable and reconfigurable analog and digital blocks with flexible automatic routing. The PSoC 4000S product family is a member of the PSoC 4 platform architecture. It is a combination of a microcontroller with standard communication and timing peripherals, a capacitive touch-sensing system (CapSense) with best-in-class performance, programmable general-purpose continuous-time and switched-capacitor analog blocks, and programmable connectivity. PSoC 4000S products will be upward compatible with members of the PSoC 4 platform for new applications and design needs.

## Features

### 32-bit MCU Subsystem

- 48-MHz Arm Cortex-M0+ CPU with single-cycle multiply
- Up to 32 KB of flash with Read Accelerator
- Up to 4 KB of SRAM

### Programmable Analog

- Single-slope 10-bit ADC function provided by Capacitance sensing block
- Two current DACs (IDACs) for general-purpose or capacitive sensing applications on any pin
- Two low-power comparators that operate in Deep Sleep low-power mode

### Programmable Digital

Programmable logic blocks allowing Boolean operations to be performed on port inputs and outputs

### Low-Power 1.71-V to 5.5-V Operation

- Deep Sleep mode with operational analog and 2.5  $\mu$ A digital system current

### Capacitive Sensing

- Cypress CapSense Sigma-Delta (CSD) provides best-in-class signal-to-noise ratio (SNR) (>5:1) and water tolerance
- Cypress-supplied software component makes capacitive sensing design easy
- Automatic hardware tuning (SmartSense™)

### Serial Communication

- Two independent run-time reconfigurable Serial Communication Blocks (SCBs) with re-configurable I2C, SPI, or UART functionality

### LCD Drive Capability

- LCD segment drive capability on GPIOs

### Timing and Pulse-Width Modulation

- Five 16-bit timer/counter/pulse-width modulator (TCPWM) blocks
- Center-aligned, Edge, and Pseudo-random modes
- Comparator-based triggering of Kill signals for motor drive and other high-reliability digital logic applications

### Up to 36 Programmable GPIO Pins

- 48-pin TQFP, 40-pin QFN, 32-pin QFN, 24-pin QFN, 32-pin TQFP, and 25-ball WLCSP packages
- Any GPIO pin can be CapSense, analog, or digital
- Drive modes, strengths, and slew rates are programmable

### PSoC Creator Design Environment

- Integrated Development Environment (IDE) provides schematic design entry and build (with analog and digital automatic routing)
- Applications Programming Interface (API) component for all fixed-function and programmable peripherals

### Industry-Standard Tool Compatibility

- After schematic entry, development can be done with Arm-based industry-standard development tools

## Logic Block Diagram

Figure 1. Block Diagram

### Functional Description

PSoC 4000S devices include extensive support for programming, testing, debugging, and tracing both hardware and firmware.

The ARM Serial-Wire Debug (SWD) interface supports all programming and debug features of the device.

Complete debug-on-chip functionality enables full-device debugging in the final system using the standard production device. It does not require special interfaces, debugging pods, simulators, or emulators. Only the standard programming connections are required to fully support debug.

The PSoC Creator IDE provides fully integrated programming and debug support for the PSoC 4000S devices. The SWD interface is fully compatible with industry-standard third-party tools. The PSoC 4000S family provides a level of security not possible with multi-chip application solutions or with microcontrollers. It has the following advantages:

- Allows disabling of debug features
- Robust flash protection

- Allows customer-proprietary functionality to be implemented in on-chip programmable blocks

The debug circuits are enabled by default and can be disabled in firmware. If they are not enabled, the only way to re-enable them is to erase the entire device, clear flash protection, and reprogram the device with new firmware that enables debugging. Thus firmware control of debugging cannot be over-ridden without erasing the firmware thus providing security.

Additionally, all device interfaces can be permanently disabled (device security) for applications concerned about phishing attacks due to a maliciously reprogrammed device or attempts to defeat security by starting and interrupting flash programming sequences. All programming, debug, and test interfaces are disabled when maximum device security is enabled. Therefore, PSoC 4000S, with device security enabled, may not be returned for failure analysis. This is a trade-off the PSoC 4000S allows the customer to make.

## More Information

Cypress provides a wealth of data at [www.cypress.com](http://www.cypress.com) to help you to select the right PSoC device for your design, and to help you to quickly and effectively integrate the device into your design. For a comprehensive list of resources, see the knowledge base article [KBA86521, How to Design with PSoC 3, PSoC 4, and PSoC 5LP](#). Following is an abbreviated list for PSoC 4:

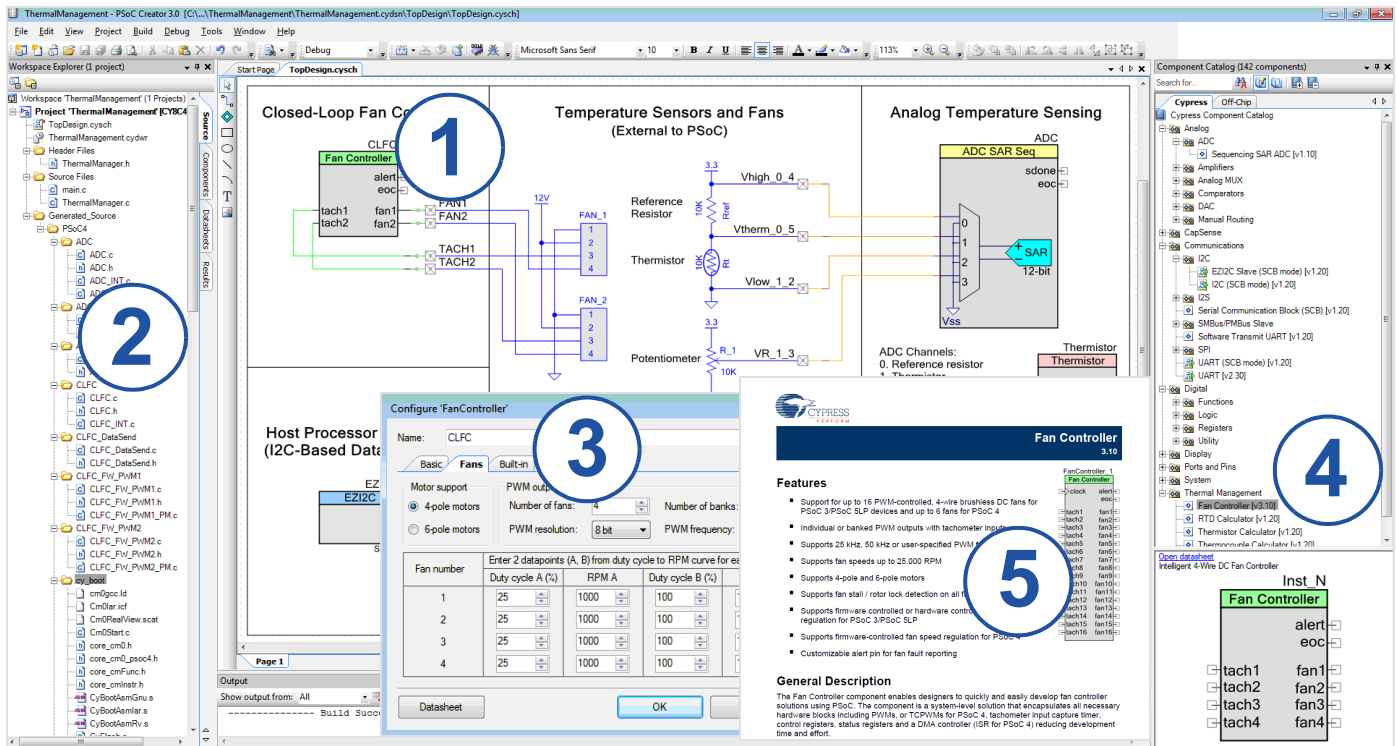

- Overview: [PSoC Portfolio](#), [PSoC Roadmap](#)
- Product Selectors: [PSoC 1](#), [PSoC 3](#), [PSoC 4](#), [PSoC 5LP](#)  
In addition, PSoC Creator includes a device selection tool.
- Application notes: Cypress offers a large number of PSoC application notes covering a broad range of topics, from basic to advanced level. Recommended application notes for getting started with PSoC 4 are:
  - [AN79953](#): Getting Started With PSoC 4
  - [AN88619](#): PSoC 4 Hardware Design Considerations
  - [AN86439](#): Using PSoC 4 GPIO Pins
  - [AN57821](#): Mixed Signal Circuit Board Layout
  - [AN81623](#): Digital Design Best Practices
  - [AN73854](#): Introduction To Bootloaders
  - [AN89610](#): Arm Cortex Code Optimization
  - [AN85951](#): PSoC® 4 and PSoC 6 MCU CapSense® Design Guide
- Technical Reference Manual (TRM) is in two documents:
  - [Architecture TRM](#) details each PSoC 4 functional block.
  - [Registers TRM](#) describes each of the PSoC 4 registers.
- Development Kits:
  - [CY8CKIT-041-40XX](#) PSoC 4 S-Series Pioneer Kit is an easy-to-use and inexpensive development platform. This kit includes connectors for Arduino™ compatible shields.
  - [CY8CKIT-145](#) PSoC 4000S CapSense Prototyping Kit enables you to evaluate and develop with Cypress' fourth-generation, low power CapSense solution using the PSoC 4000s device.
- The [MiniProg3](#) device provides an interface for flash programming and debug.
- **Software User Guide:**
  - A step-by-step guide for using PSoC Creator. The software user guide shows you how the PSoC Creator build process works in detail, how to use source control with PSoC Creator, and much more.
- **Component Datasheets:**
  - The flexibility of PSoC allows the creation of new peripherals (components) long after the device has gone into production. Component datasheets provide all the information needed to select and use a particular component, including a functional description, API documentation, example code, and AC/DC specifications.
- **Online:**
  - In addition to print documentation, the [Cypress PSoC forums](#) connect you with fellow PSoC users and experts in PSoC from around the world, 24 hours a day, 7 days a week.

## PSoC Creator

PSoC Creator is a free Windows-based Integrated Design Environment (IDE). It enables concurrent hardware and firmware design of PSoC 3, PSoC 4, and PSoC 5LP based systems. Create designs using classic, familiar schematic capture supported by over 100 pre-verified, production-ready PSoC Components; see the [list of component datasheets](#). With PSoC Creator, you can:

1. Drag and drop component icons to build your hardware system design in the main design workspace
2. Codesign your application firmware with the PSoC hardware, using the PSoC Creator IDE C compiler
3. Configure components using the configuration tools
4. Explore the library of 100+ components
5. Review component datasheets

## Functional Overview

### CPU and Memory Subsystem

#### CPU

The Cortex-M0+ CPU in the PSoC 4000S is part of the 32-bit MCU subsystem, which is optimized for low-power operation with extensive clock gating. Most instructions are 16 bits in length and the CPU executes a subset of the Thumb-2 instruction set. It includes a nested vectored interrupt controller (NVIC) block with eight interrupt inputs and also includes a Wakeup Interrupt Controller (WIC). The WIC can wake the processor from Deep Sleep mode, allowing power to be switched off to the main processor when the chip is in Deep Sleep mode.

The CPU also includes a debug interface, the serial wire debug (SWD) interface, which is a two-wire form of JTAG. The debug configuration used for PSoC 4000S has four breakpoint (address) comparators and two watchpoint (data) comparators.

#### Flash

The PSoC 4000S device has a flash module with a flash accelerator, tightly coupled to the CPU to improve average access times from the flash block. The low-power flash block is designed to deliver two wait-state (WS) access time at 48 MHz. The flash accelerator delivers 85% of single-cycle SRAM access performance on average.

#### SRAM

Four KB of SRAM are provided with zero wait-state access at 48 MHz.

#### SROM

A supervisory ROM that contains boot and configuration routines is provided.

### System Resources

#### Power System

The power system is described in detail in the section [Power on page 12](#). It provides assurance that voltage levels are as required for each respective mode and either delays mode entry (for example, on power-on reset (POR)) until voltage levels are as required for proper functionality, or generates resets (for example, on brown-out detection). The PSoC 4000S operates with a single external supply over the range of either 1.8 V  $\pm$ 5% (externally regulated) or 1.8 to 5.5 V (internally regulated) and has three different power modes, transitions between which are managed by the power system. The PSoC 4000S provides Active, Sleep, and Deep Sleep low-power modes.

All subsystems are operational in Active mode. The CPU subsystem (CPU, flash, and SRAM) is clock-gated off in Sleep mode, while all peripherals and interrupts are active with instantaneous wake-up on a wake-up event. In Deep Sleep mode, the high-speed clock and associated circuitry is switched off; wake-up from this mode takes 35  $\mu$ s.

#### Clock System

The PSoC 4000S clock system is responsible for providing clocks to all subsystems that require clocks and for switching between different clock sources without glitching. In addition, the clock system ensures that there are no metastable conditions.

The clock system for the PSoC 4000S consists of the internal main oscillator (IMO), internal low-frequency oscillator (ILO), a 32 kHz Watch Crystal Oscillator (WCO) and provision for an external clock. Clock dividers are provided to generate clocks for peripherals on a fine-grained basis. Fractional dividers are also provided to enable clocking of higher data rates for UARTs.

The HFCLK signal can be divided down to generate synchronous clocks for the analog and digital peripherals. There are eight clock dividers for the PSoC 4000S, two of those are fractional dividers. The 16-bit capability allows flexible generation of fine-grained frequency values, and is fully supported in PSoC Creator.

**Figure 3. PSoC 4000S MCU Clocking Architecture**

#### IMO Clock Source

The IMO is the primary source of internal clocking in the PSoC 4000S. It is trimmed during testing to achieve the specified accuracy. The IMO default frequency is 24 MHz and it can be adjusted from 24 to 48 MHz in steps of 4 MHz. The IMO tolerance with Cypress-provided calibration settings is  $\pm$ 2%.

#### ILO Clock Source

The ILO is a very low power, nominally 40-kHz oscillator, which is primarily used to generate clocks for the watchdog timer (WDT) and peripheral operation in Deep Sleep mode. ILO-driven counters can be calibrated to the IMO to improve accuracy. Cypress provides a software component, which does the calibration.

#### Watch Crystal Oscillator (WCO)

The PSoC 4000S clock subsystem also implements a low-frequency (32-kHz watch crystal) oscillator that can be used for precision timing applications. The WCO block allows locking the IMO to the 32-kHz oscillator. The WCO on PSoC 4000S series devices does not connect to the LFCLK or WDT. Due to this, RTC functionality is not supported.

### Watchdog Timer

A watchdog timer is implemented in the clock block running from the ILO; this allows watchdog operation during Deep Sleep and generates a watchdog reset if not serviced before the set timeout occurs. The watchdog reset is recorded in a Reset Cause register, which is firmware readable.

### Reset

The PSoC 4000S can be reset from a variety of sources including a software reset. Reset events are asynchronous and guarantee reversion to a known state. The reset cause is recorded in a register, which is sticky through reset and allows software to determine the cause of the reset. An XRES pin is reserved for external reset by asserting it active low. The XRES pin has an internal pull-up resistor that is always enabled.

### Voltage Reference

The PSoC 4000S reference system generates all internally required references. A 1.2-V voltage reference is provided for the comparator. The IDACs are based on a  $\pm 5\%$  reference.

## Analog Blocks

### Low-power Comparators (LPC)

The PSoC 4000S has a pair of low-power comparators, which can also operate in Deep Sleep modes. This allows the analog system blocks to be disabled while retaining the ability to monitor external voltage levels during low-power modes. The comparator outputs are normally synchronized to avoid metastability unless operating in an asynchronous power mode where the system wake-up circuit is activated by a comparator switch event. The LPC outputs can be routed to pins.

### Current DACs

The PSoC 4000S has two IDACs, which can drive any of the pins on the chip. These IDACs have programmable current ranges.

### Analog Multiplexed Buses

The PSoC 4000S has two concentric independent buses that go around the periphery of the chip. These buses (called amux buses) are connected to firmware-programmable analog switches that allow the chip's internal resources (IDACs, comparator) to connect to any pin on the I/O Ports.

## Programmable Digital Blocks

The programmable I/O (Smart I/O) block is a fabric of switches and LUTs that allows Boolean functions to be performed in signals being routed to the pins of a GPIO port. The Smart I/O can perform logical operations on input pins to the chip and on signals going out as outputs.

## Fixed Function Digital

### Timer/Counter/PWM (TCPWM) Block

The TCPWM block consists of a 16-bit counter with user-programmable period length. There is a capture register to record the count value at the time of an event (which may be an I/O event), a period register that is used to either stop or auto-reload the counter when its count is equal to the period register, and compare registers to generate compare value signals that are used as PWM duty cycle outputs. The block also provides true and complementary outputs with programmable offset between them to allow use as dead-band programmable complementary PWM outputs. It also has a Kill input to force outputs to a predetermined state; for example, this is used in motor drive systems when an over-current state is indicated and the PWM driving the FETs needs to be shut off immediately with no time for software intervention. There are five TCPWM blocks in the PSoC 4000S.

### Serial Communication Block (SCB)

The PSoC 4000S has two serial communication blocks, which can be programmed to have SPI, I2C, or UART functionality.

**I<sup>2</sup>C Mode:** The hardware I<sup>2</sup>C block implements a full multi-master and slave interface (it is capable of multi-master arbitration). This block is capable of operating at speeds of up to 1 Mbps (Fast Mode Plus) and has flexible buffering options to reduce interrupt overhead and latency for the CPU. It also supports EZI2C that creates a mailbox address range in the memory of the PSoC 4000S and effectively reduces I<sup>2</sup>C communication to reading from and writing to an array in memory. In addition, the block supports an 8-deep FIFO for receive and transmit which, by increasing the time given for the CPU to read data, greatly reduces the need for clock stretching caused by the CPU not having read data on time.

The I<sup>2</sup>C peripheral is compatible with the I<sup>2</sup>C Standard-mode and Fast-mode devices as defined in the NXP I<sup>2</sup>C-bus specification and user manual (UM10204). The I<sup>2</sup>C bus I/O is implemented with GPIO in open-drain modes.

The PSoC 4000S is not completely compliant with the I<sup>2</sup>C spec in the following respect:

- GPIO cells are not overvoltage tolerant and, therefore, cannot be hot-swapped or powered up independently of the rest of the I<sup>2</sup>C system.

**UART Mode:** This is a full-feature UART operating at up to 1 Mbps. It supports automotive single-wire interface (LIN), infrared interface (IrDA), and SmartCard (ISO7816) protocols, all of which are minor variants of the basic UART protocol. In addition, it supports the 9-bit multiprocessor mode that allows addressing of peripherals connected over common RX and TX lines. Common UART functions such as parity error, break detect, and frame error are supported. An 8-deep FIFO allows much greater CPU service latencies to be tolerated.

**SPI Mode:** The SPI mode supports full Motorola SPI, TI SSP (adds a start pulse used to synchronize SPI Codecs), and National Microwire (half-duplex form of SPI). The SPI block can use the FIFO.

## GPIO

The PSoC 4000S has up to 36 GPIOs. The GPIO block implements the following:

- Eight drive modes:
  - Analog input mode (input and output buffers disabled)
  - Input only
  - Weak pull-up with strong pull-down
  - Strong pull-up with weak pull-down
  - Open drain with strong pull-down
  - Open drain with strong pull-up
  - Strong pull-up with strong pull-down
  - Weak pull-up with weak pull-down
- Input threshold select (CMOS or LVTTTL).
- Individual control of input and output buffer enabling/disabling in addition to the drive strength modes
- Selectable slew rates for dV/dt related noise control to improve EMI

The pins are organized in logical entities called ports, which are 8-bit in width (less for Ports 2 and 3). During power-on and reset, the blocks are forced to the disable state so as not to crowbar any inputs and/or cause excess turn-on current. A multiplexing network known as a high-speed I/O matrix is used to multiplex between various signals that may connect to an I/O pin.

Data output and pin state registers store, respectively, the values to be driven on the pins and the states of the pins themselves.

Every I/O pin can generate an interrupt if so enabled and each I/O port has an interrupt request (IRQ) and interrupt service routine (ISR) vector associated with it (5 for PSoC 4000S).

## Special Function Peripherals

### CapSense

CapSense is supported in the PSoC 4000S through a CapSense Sigma-Delta (CSD) block that can be connected to any pins through an analog multiplex bus via analog switches. CapSense function can thus be provided on any available pin or group of pins in a system under software control. A PSoC Creator

component is provided for the CapSense block to make it easy for the user.

Shield voltage can be driven on another analog multiplex bus to provide water-tolerance capability. Water tolerance is provided by driving the shield electrode in phase with the sense electrode to keep the shield capacitance from attenuating the sensed input. Proximity sensing can also be implemented.

The CapSense block has two IDACs, which can be used for general purposes if CapSense is not being used (both IDACs are available in that case) or if CapSense is used without water tolerance (one IDAC is available).

The CapSense block also provides a 10-bit Slope ADC function, which can be used in conjunction with the CapSense function.

The CapSense block is an advanced, low-noise, programmable block with programmable voltage references and current source ranges for improved sensitivity and flexibility. It can also use an external reference voltage. It has a full-wave CSD mode that alternates sensing to VDDA and Ground to null out power-supply related noise.

### LCD Segment Drive

The PSoC 4000S has an LCD controller, which can drive up to 8 commons and up to 28 segments. It uses full digital methods to drive the LCD segments requiring no generation of internal LCD voltages. The two methods used are referred to as Digital Correlation and PWM. Digital Correlation pertains to modulating the frequency and drive levels of the common and segment signals to generate the highest RMS voltage across a segment to light it up or to keep the RMS signal to zero. This method is good for STN displays but may result in reduced contrast with TN (cheaper) displays. PWM pertains to driving the panel with PWM signals to effectively use the capacitance of the panel to provide the integration of the modulated pulse-width to generate the desired LCD voltage. This method results in higher power consumption but can result in better results when driving TN displays.

## Pinouts

The following table provides the pin list for PSoC 4000S for the 48-pin TQFP, 40-pin QFN, 32-pin QFN, 24-pin QFN, 32-pin TQFP, and 25-ball CSP packages. All port pins support GPIO. Pin 11 is a No-Connect in the 48-TQFP.

**Table 1. PSoC 4000S Pin List**

**Note:** Pins 11, 15, 26, and 27 are No connects (NC) on the 48-pin TQFP.

**Descriptions of the pin functions are as follows:**

**VDDD:** Power supply for the digital section.

**VDDA:** Power supply for the analog section.

**VSSD, VSSA:** Ground pins for the digital and analog sections respectively.

**VCCD:** Regulated digital supply (1.8 V ±5%)

**VDD:** Power supply to all sections of the chip

**VSS:** Ground for all sections of the chip

**Alternate Pin Functions**

Each port pin can be assigned to one of multiple functions; it can, for instance, be an analog I/O, a digital peripheral function, an LCD pin, or a CapSense pin. The pin assignments are shown in the following table.

**Table 2. Pin Assignments**

Port/ Pin	Analog	Smart I/O	Alternate Function 1	Alternate Function 2	Alternate Function 3	Deep Sleep 1	Deep Sleep 2
P0.0	lpcomp.in_p[0]				tcpwm.tr_in[0]		scb[0].spi_select1:0
P0.1	lpcomp.in_n[0]				tcpwm.tr_in[1]		scb[0].spi_select2:0

**Power**

The following power system diagram shows the set of power supply pins as implemented for the PSoC 4000S. The system has one regulator in Active mode for the digital circuitry. There is no analog regulator; the analog circuits run directly from the V<sub>DD</sub> input.

**Figure 4. Power Supply Connections**

There are two distinct modes of operation. In Mode 1, the supply voltage range is 1.8 V to 5.5 V (unregulated externally; internal regulator operational). In Mode 2, the supply range is 1.8 V ±5% (externally regulated; 1.71 to 1.89, internal regulator bypassed).

**Figure 5. External Supply Range from 1.8 V to 5.5 V with Internal Regulator Active**

Power supply bypass connections example

**Mode 1: 1.8 V to 5.5 V External Supply**

In this mode, the PSoC 4000S is powered by an external power supply that can be anywhere in the range of 1.8 to 5.5 V. This range is also designed for battery-powered operation. For example, the chip can be powered from a battery system that starts at 3.5 V and works down to 1.8 V. In this mode, the internal regulator of the PSoC 4000S supplies the internal logic and its output is connected to the V<sub>CCD</sub> pin. The VCCD pin must be bypassed to ground via an external capacitor (0.1 µF; X5R ceramic or better) and must not be connected to anything else.

**Mode 2: 1.8 V ±5% External Supply**

In this mode, the PSoC 4000S is powered by an external power supply that must be within the range of 1.71 to 1.89 V; note that this range needs to include the power supply ripple too. In this mode, the VDD and VCCD pins are shorted together and bypassed. The internal regulator can be disabled in the firmware.

Bypass capacitors must be used from VDDD to ground. The typical practice for systems in this frequency range is to use a capacitor in the 1-µF range, in parallel with a smaller capacitor (0.1 µF, for example). Note that these are simply rules of thumb and that, for critical applications, the PCB layout, lead inductance, and the bypass capacitor parasitic should be simulated to design and obtain optimal bypassing.

An example of a bypass scheme is shown in the following diagram.

## Development Support

The PSoC 4000S has a rich set of documentation, development tools, and online resources to assist you during your development process. Visit [www.cypress.com/go/psoc4](http://www.cypress.com/go/psoc4) to find out more.

### Documentation

A suite of documentation supports the PSoC 4000S to ensure that you can find answers to your questions quickly. This section contains a list of some of the key documents.

**Software User Guide:** A step-by-step guide for using PSoC Creator. The software user guide shows you how the PSoC Creator build process works in detail, how to use source control with PSoC Creator, and much more.

**Component Datasheets:** The flexibility of PSoC allows the creation of new peripherals (components) long after the device has gone into production. Component data sheets provide all of the information needed to select and use a particular component, including a functional description, API documentation, example code, and AC/DC specifications.

**Application Notes:** PSoC application notes discuss a particular application of PSoC in depth; examples include brushless DC

motor control and on-chip filtering. Application notes often include example projects in addition to the application note document.

**Technical Reference Manual:** The Technical Reference Manual (TRM) contains all the technical detail you need to use a PSoC device, including a complete description of all PSoC registers. The TRM is available in the Documentation section at [www.cypress.com/psoc4](http://www.cypress.com/psoc4).

### Online

In addition to print documentation, the Cypress PSoC forums connect you with fellow PSoC users and experts in PSoC from around the world, 24 hours a day, 7 days a week.

### Tools

With industry standard cores, programming, and debugging interfaces, the PSoC 4000S is part of a development tool ecosystem. Visit us at [www.cypress.com/go/psoccreator](http://www.cypress.com/go/psoccreator) for the latest information on the revolutionary, easy to use PSoC Creator IDE, supported third party compilers, programmers, debuggers, and development kits.

## Electrical Specifications

### Absolute Maximum Ratings

Table 3. Absolute Maximum Ratings<sup>[1]</sup>

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID1	V <sub>DDD_ABS</sub>	Digital supply relative to V <sub>SS</sub>	-0.5	-	6	V	-
SID2	V <sub>CCD_ABS</sub>	Direct digital core voltage input relative to V <sub>SS</sub>	-0.5	-	1.95		-
SID3	V <sub>GPIO_ABS</sub>	GPIO voltage	-0.5	-	V <sub>DD</sub> + 0.5		-
SID4	I <sub>GPIO_ABS</sub>	Maximum current per GPIO	-25	-	25	mA	-
SID5	I <sub>GPIO_injection</sub>	GPIO injection current, Max for V <sub>IH</sub> > V <sub>DDD</sub> , and Min for V <sub>IL</sub> < V <sub>SS</sub>	-0.5	-	0.5		Current injected per pin
BID44	ESD_HBM	Electrostatic discharge human body model	2200	-	-	V	-
BID45	ESD_CDM	Electrostatic discharge charged device model	500	-	-		-
BID46	LU	Pin current for latch-up	-140	-	140	mA	-

#### Note

- Usage above the absolute maximum conditions listed in Table 3 may cause permanent damage to the device. Exposure to Absolute Maximum conditions for extended periods of time may affect device reliability. The Maximum Storage Temperature is 150 °C in compliance with JEDEC Standard JESD22-A103, High Temperature Storage Life. When used below Absolute Maximum conditions but above normal operating conditions, the device may not operate to specification.

**Device Level Specifications**

All specifications are valid for  $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$  and  $T_J \leq 100\text{ }^{\circ}\text{C}$ , except where noted. Specifications are valid for 1.71 V to 5.5 V, except where noted.

**Table 4. DC Specifications**

Typical values measured at  $V_{DD} = 3.3\text{ V}$  and  $25\text{ }^{\circ}\text{C}$ .

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID53	$V_{DD}$	Power supply input voltage	1.8	–	5.5	V	Internally regulated supply

SID314E	IDAC1CRT32	Output current of IDAC1 (7 bits) in high range, 2X mode	540	–	660	µA	LSB = 4.8-µA typ.
SID315	IDAC2CRT1	Output current of IDAC2 (7 bits) in low range	4.2	–	5.4	µA	LSB = 37.5-nA typ.

**Table 12. CSD and IDAC Specifications (continued)**

SPEC ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID315A	IDAC2CRT2	Output current of IDAC2 (7 bits) in medium range	34	–	41	µA	LSB = 300-nA typ.
SID315B	IDAC2CRT3	Output current of IDAC2 (7 bits) in high range	275	–	330	µA	LSB = 2.4-µA typ.
SID315C	IDAC2CRT12	Output current of IDAC2 (7 bits) in low range, 2X mode	8	–	10.5	µA	LSB = 75-nA typ.
SID315D	IDAC2CRT22	Output current of IDAC2(7 bits) in medium range, 2X mode	69	–	82	µA	LSB = 600-nA typ.
SID315E	IDAC2CRT32	Output current of IDAC2(7 bits) in high range, 2X mode	540	–	660	µA	LSB = 4.8-µA typ.
SID315F	IDAC3CRT13	Output current of IDAC in 8-bit mode in low range	8	–	10.5	µA	LSB = 37.5-nA typ.
SID315G	IDAC3CRT23	Output current of IDAC in 8-bit mode in medium range	69	–	82	µA	LSB = 300-nA typ.
SID315H	IDAC3CRT33	Output current of IDAC in 8-bit mode in high range	540	–	660	µA	LSB = 2.4-µA typ.
SID320	IDACOFFSET	All zeroes input	–	–	1	LSB	Polarity set by Source or Sink. Offset is 2 LSBs for 37.5 nA/LSB mode
SID321	IDACGAIN	Full-scale error less offset	–	–	±10	%	
SID322	IDACMISMATCH1	Mismatch between IDAC1 and IDAC2 in Low mode	–	–	9.2	LSB	LSB = 37.5-nA typ.
SID322A	IDACMISMATCH2	Mismatch between IDAC1 and IDAC2 in Medium mode	–	–	5.6	LSB	LSB = 300-nA typ.
SID322B	IDACMISMATCH3	Mismatch between IDAC1 and IDAC2 in High mode	–	–	6.8	LSB	LSB = 2.4-µA typ.
SID323	IDACSET8	Settling time to 0.5 LSB for 8-bit IDAC	–	–	10	µs	Full-scale transition. No external load.
SID324	IDACSET7	Settling time to 0.5 LSB for 7-bit IDAC	–	–	10	µs	Full-scale transition. No external load.
SID325	CMOD	External modulator capacitor.	–	2.2	–	nF	5-V rating, X7R or NP0 cap.

## 10-bit CapSense ADC

**Table 13. 10-bit CapSense ADC Specifications**

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SIDA94	A_RES	Resolution	–	–	10	bits	Auto-zeroing is required every millisecond
SIDA95	A_CHNLS_S	Number of channels - single ended	–	–	16		Defined by AMUX Bus.
SIDA97	A-MONO	Monotonicity	–	–	–	Yes	
SIDA98	A_GAINERR	Gain error	–	–	±2	%	In V <sub>REF</sub> (2.4 V) mode with V <sub>DDA</sub> bypass capacitance of 10 µF
SIDA99	A_OFFSET	Input offset voltage	–	–	3	mV	In V <sub>REF</sub> (2.4 V) mode with V <sub>DDA</sub> bypass capacitance of 10 µF
SIDA100	A_ISAR	Current consumption	–	–	0.25	mA	
SIDA101	A_VINS	Input voltage range - single ended	V <sub>SSA</sub>	–	V <sub>DDA</sub>	V	
SIDA103	A_INRES	Input resistance	–	2.2	–	KΩ	
SIDA104	A_INCAP	Input capacitance	–	20	–	pF	
SIDA106	A_PSR	Power supply rejection ratio	–	60	–	dB	In V <sub>REF</sub> (2.4 V) mode with V <sub>DDA</sub> bypass capacitance of 10 µF
SIDA107	A_TACQ	Sample acquisition time	–	1	–	µs	
SIDA108	A_CONV8	Conversion time for 8-bit resolution at conversion rate = F <sub>clk</sub> /(2 <sup>N+2</sup> ). Clock frequency = 48 MHz.	–	–	21.3	µs	Does not include acquisition time. Equivalent to 44.8 ksp/s including acquisition time.
SIDA108A	A_CONV10	Conversion time for 10-bit resolution at conversion rate = F <sub>clk</sub> /(2 <sup>N+2</sup> ). Clock frequency = 48 MHz.	–	–	85.3	µs	Does not include acquisition time. Equivalent to 11.6 ksp/s including acquisition time.
SIDA109	A_SND	Signal-to-noise and Distortion ratio (SINAD)	–	61	–	dB	With 10-Hz input sine wave, external 2.4-V reference, V <sub>REF</sub> (2.4 V) mode
SIDA110	A_BW	Input bandwidth without aliasing	–	–	22.4	kHz	8-bit resolution
SIDA111	A_INL	Integral Non Linearity. 1 ksp/s	–	–	2	LSB	V <sub>REF</sub> = 2.4 V or greater
SIDA112	A_DNL	Differential Non Linearity. 1 ksp/s	–	–	1	LSB	

**Digital Peripherals**
*Timer Counter Pulse-Width Modulator (TCPWM)*
**Table 14. TCPWM Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID.TCPWM.1	ITCPWM1	Block current consumption at 3 MHz	–	–	45	μA	All modes (TCPWM)
SID.TCPWM.2	ITCPWM2	Block current consumption at 12 MHz	–	–	155		All modes (TCPWM)
SID.TCPWM.2A	ITCPWM3	Block current consumption at 48 MHz	–	–	650		All modes (TCPWM)
SID.TCPWM.3	TCPWM <sub>FREQ</sub>	Operating frequency	–	–	F <sub>c</sub>	MHz	F <sub>c</sub> max = CLK_SYS Maximum = 48 MHz
SID.TCPWM.4	TPWM <sub>ENEXT</sub>	Input trigger pulse width	2/F <sub>c</sub>	–	–	ns	For all trigger events <sup>[6]</sup>
SID.TCPWM.5	TPWM <sub>EXT</sub>	Output trigger pulse widths	2/F <sub>c</sub>	–	–		Minimum possible width of Overflow, Underflow, and CC (Counter equals Compare value) outputs
SID.TCPWM.5A	TC <sub>RES</sub>	Resolution of counter	1/F <sub>c</sub>	–	–		Minimum time between successive counts
SID.TCPWM.5B	PWM <sub>RES</sub>	PWM resolution	1/F <sub>c</sub>	–	–		Minimum pulse width of PWM Output
SID.TCPWM.5C	Q <sub>RES</sub>	Quadrature inputs resolution	1/F <sub>c</sub>	–	–		Minimum pulse width between Quadrature phase inputs

**Note**

6. Trigger events can be Stop, Start, Reload, Count, Capture, or Kill depending on which mode of operation is selected.

*I<sup>2</sup>C*
**Table 15. Fixed I<sup>2</sup>C DC Specifications<sup>[7]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID149	I <sub>I2C1</sub>	Block current consumption at 100 kHz	–	–	50	μA	–
SID150	I <sub>I2C2</sub>	Block current consumption at 400 kHz	–	–	135		–
SID151	I <sub>I2C3</sub>	Block current consumption at 1 Mbps	–	–	310		–
SID152	I <sub>I2C4</sub>	I <sup>2</sup> C enabled in Deep Sleep mode	–	–	1.4		–

**Table 16. Fixed I<sup>2</sup>C AC Specifications<sup>[7]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID153	F <sub>I2C1</sub>	Bit rate	–	–	1	Mbps	–

*SPI*
**Table 17. SPI DC Specifications<sup>[7]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID163	ISPI1	Block current consumption at 1 Mbps	–	–	360	μA	–
SID164	ISPI2	Block current consumption at 4 Mbps	–	–	560		–
SID165	ISPI3	Block current consumption at 8 Mbps	–	–	600		–

**Table 18. SPI AC Specifications<sup>[7]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID166	FSPI	SPI operating frequency (Master; 6X Oversampling)	–	–	8	MHz	–
<b>Fixed SPI Master Mode AC Specifications</b>							
SID167	TDMO	MOSI Valid after SClock driving edge	–	–	15	ns	–
SID168	TDSI	MISO Valid before SClock capturing edge	20	–	–		Full clock, late MISO sampling
SID169	THMO	Previous MOSI data hold time	0	–	–		Referred to Slave capturing edge
<b>Fixed SPI Slave Mode AC Specifications</b>							
SID170	TDMI	MOSI Valid before Sclock Capturing edge	40	–	–	ns	–
SID171	TDSO	MISO Valid after Sclock driving edge	–	–	42 + (3 × Tcpu)		T <sub>CPU</sub> = 1/F <sub>CPU</sub>
SID171A	TDSO_EXT	MISO Valid after Sclock driving edge in Ext. Clk mode	–	–	48		–
SID172	THSO	Previous MISO data hold time	0	–	–		–
SID172A	TSSELSSCK	SSEL Valid to first SCK Valid edge	100	–	–	ns	–

**Note**

7. Guaranteed by characterization.

**UART**
**Table 19. UART DC Specifications<sup>[8]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID160	I <sub>UART1</sub>	Block current consumption at 100 Kbps	–	–	55	μA	–
SID161	I <sub>UART2</sub>	Block current consumption at 1000 Kbps	–	–	312	μA	–

**Table 20. UART AC Specifications<sup>[8]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID162	F <sub>UART</sub>	Bit rate	–	–	1	Mbps	–

**LCD Direct Drive**
**Table 21. LCD Direct Drive DC Specifications<sup>[8]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID154	I <sub>LCDLOW</sub>	Operating current in low power mode	–	5	–	μA	16 × 4 small segment disp. at 50 Hz
SID155	C <sub>LCDCAP</sub>	LCD capacitance per segment/common driver	–	500	5000	pF	–
SID156	LCD <sub>OFFSET</sub>	Long-term segment offset	–	20	–	mV	–
SID157	I <sub>LCDOP1</sub>	LCD system operating current V <sub>bias</sub> = 5 V	–	2	–	mA	32 × 4 segments. 50 Hz. 25 °C
SID158	I <sub>LCDOP2</sub>	LCD system operating current V <sub>bias</sub> = 3.3 V	–	2	–		32 × 4 segments. 50 Hz. 25 °C

**Table 22. LCD Direct Drive AC Specifications<sup>[8]</sup>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID159	F <sub>LCD</sub>	LCD frame rate	10	50	150	Hz	–

**Note**

8. Guaranteed by characterization.

## Memory

### Flash

**Table 23. Flash DC Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID173	V <sub>PE</sub>	Erase and program voltage	1.71	–	5.5	V	–

**Table 24. Flash AC Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID174	T <sub>ROWWRITE</sub> <sup>[9]</sup>	Row (block) write time (erase and program)	–	–	20	ms	Row (block) = 128 bytes
SID175	T <sub>ROWERASE</sub> <sup>[9]</sup>	Row erase time	–	–	16		–
SID176	T <sub>ROWPROGRAM</sub> <sup>[9]</sup>	Row program time after erase	–	–	4		–
SID178	T <sub>BULKERASE</sub> <sup>[9]</sup>	Bulk erase time (32 KB)	–	–	35		–
SID180 <sup>[10]</sup>	T <sub>DEVPROG</sub> <sup>[9]</sup>	Total device program time	–	–	7	Seconds	–
SID181 <sup>[10]</sup>	F <sub>END</sub>	Flash endurance	100 K	–	–	Cycles	–
SID182 <sup>[10]</sup>	F <sub>RET</sub>	Flash retention. T <sub>A</sub> ≤ 55 °C, 100 K P/E cycles	20	–	–	Years	–
SID182A <sup>[10]</sup>	–	Flash retention. T <sub>A</sub> ≤ 85 °C, 10 K P/E cycles	10	–	–		–
SID256	TWS48	Number of Wait states at 48 MHz	2	–	–		CPU execution from Flash
SID257	TWS24	Number of Wait states at 24 MHz	1	–	–		CPU execution from Flash

## System Resources

### Power-on Reset (POR)

**Table 25. Power On Reset (PRES)**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID.CLK#6	SR_POWER_UP	Power supply slew rate	1	–	67	V/ms	At power-up
SID185 <sup>[10]</sup>	V <sub>RISEIPOR</sub>	Rising trip voltage	0.80	–	1.5	V	–
SID186 <sup>[10]</sup>	V <sub>FALLIPOR</sub>	Falling trip voltage	0.70	–	1.4		–

**Table 26. Brown-out Detect (BOD) for V<sub>CCD</sub>**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID190 <sup>[10]</sup>	V <sub>FALLPPOR</sub>	BOD trip voltage in active and sleep modes	1.48	–	1.62	V	–
SID192 <sup>[10]</sup>	V <sub>FALLDPSLP</sub>	BOD trip voltage in Deep Sleep	1.11	–	1.5		–

### Notes

9. It can take as much as 20 milliseconds to write to Flash. During this time the device should not be Reset, or Flash operations will be interrupted and cannot be relied on to have completed. Reset sources include the XRES pin, software resets, CPU lockup states and privilege violations, improper power supply levels, and watchdogs. Make certain that these are not inadvertently activated.

10. Guaranteed by characterization.

**SWD Interface**
**Table 27. SWD Interface Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID213	F_SWDCLK1	$3.3\text{ V} \leq V_{DD} \leq 5.5\text{ V}$	–	–	14	MHz	SWDCLK $\leq$ 1/3 CPU clock frequency
SID214	F_SWDCLK2	$1.71\text{ V} \leq V_{DD} \leq 3.3\text{ V}$	–	–	7		SWDCLK $\leq$ 1/3 CPU clock frequency
SID215 <sup>[11]</sup>	T_SWDI_SETUP	$T = 1/f$ SWDCLK	$0.25 \times T$	–	–	ns	–
SID216 <sup>[11]</sup>	T_SWDI_HOLD	$T = 1/f$ SWDCLK	$0.25 \times T$	–	–		–
SID217 <sup>[11]</sup>	T_SWDO_VALID	$T = 1/f$ SWDCLK	–	–	$0.5 \times T$		–
SID217A <sup>[11]</sup>	T_SWDO_HOLD	$T = 1/f$ SWDCLK	1	–	–		–

**Internal Main Oscillator (IMO)**
**Table 28. IMO DC Specifications**

(Guaranteed by Design)

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID218	I <sub>IMO1</sub>	IMO operating current at 48 MHz	–	–	250	μA	–
SID219	I <sub>IMO2</sub>	IMO operating current at 24 MHz	–	–	180	μA	–

**Table 29. IMO AC Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID223	F <sub>IMOTOL1</sub>	Frequency variation at 24, 32, and 48 MHz (trimmed)	–	–	±2	%	–
SID226	T <sub>STARTIMO</sub>	IMO startup time	–	–	7	μs	–
SID228	T <sub>JITRMSIMO2</sub>	RMS jitter at 24 MHz	–	145	–	ps	–

**Internal Low-Speed Oscillator (ILO)**
**Table 30. ILO DC Specifications**

(Guaranteed by Design)

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID231 <sup>[11]</sup>	I <sub>ILO1</sub>	ILO operating current	–	0.3	1.05	μA	–

**Table 31. ILO AC Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID234 <sup>[11]</sup>	T <sub>STARTILO1</sub>	ILO startup time	–	–	2	ms	–
SID236 <sup>[11]</sup>	T <sub>ILODUTY</sub>	ILO duty cycle	40	50	60	%	–
SID237	F <sub>ILOTRIM1</sub>	ILO frequency range	20	40	80	kHz	–

The nomenclature used in the preceding table is based on the following part numbering convention:

**Table 37. Nomenclature**

Field	Description	Values	Meaning
CY8C	Cypress Prefix		
4	Architecture	4	PSoC 4
A	Family	0	4000 Family
B	CPU Speed	2	24 MHz
		4	48 MHz
C	Flash Capacity	4	16 KB
		5	32 KB
		6	64 KB
		7	128 KB
DE	Package Code	AX	TQFP (0.8-mm pitch)
		AZ	TQFP (0.5-mm pitch)
		LQ	QFN
		PV	SSOP
		FN	CSP
F	Temperature Range	I	Industrial
S	Series Designator	S	PSoC 4 S-Series
		M	PSoC 4 M-Series
		L	PSoC 4 L-Series
		BL	PSoC 4 BLE-Series
XYZ	Attributes Code	000-999	Code of feature set in the specific family

The following is an example of a part number:

**Example**

## Packaging

The PSoC 4000S will be offered in 48-pin TQFP, 40-pin QFN, 32-pin QFN, 24-pin QFN, 32-pin TQFP, and 25-ball WLCSP packages. Package dimensions and Cypress drawing numbers are in the following table.

**Table 38. Package List**

Spec ID#	Package	Description	Package Dwg
BID20	48-pin TQFP	7 × 7 × 1.4 mm height with 0.5-mm pitch	51-85135
BID27	40-pin QFN	6 × 6 × 0.6 mm height with 0.5-mm pitch	001-80659
BID34A	32-pin QFN	5 × 5 × 0.6 mm height with 0.5-mm pitch	001-42168
BID34	24-pin QFN	4 × 4 × 0.6 mm height with 0.5-mm pitch	001-13937
BID34G	32-pin TQFP	7 × 7 × 1.4 mm height with 0.8-mm pitch	51-85088
BID34F	25-ball WLCSP	2.02 × 1.93 × 0.48 mm height with 0.35-mm pitch	002-09957

**Table 39. Package Thermal Characteristics**

Parameter	Description	Package	Min	Typ	Max	Units
T <sub>A</sub>	Operating ambient temperature		-40	25	85	°C
T <sub>J</sub>	Operating junction temperature		-40	-	100	°C
T <sub>JA</sub>	Package θ <sub>JA</sub>	48-pin TQFP	-	73.5	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	48-pin TQFP	-	33.5	-	°C/W
T <sub>JA</sub>	Package θ <sub>JA</sub>	40-pin QFN	-	17.8	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	40-pin QFN	-	2.8	-	°C/W
T <sub>JA</sub>	Package θ <sub>JA</sub>	32-pin QFN	-	20.8	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	32-pin QFN	-	5.9	-	°C/W
T <sub>JA</sub>	Package θ <sub>JA</sub>	24-pin QFN	-	21.7	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	24-pin QFN	-	5.6	-	°C/W
T <sub>JA</sub>	Package θ <sub>JA</sub>	32-pin TQFP	-	29.4	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	32-pin TQFP	-	3.5	-	°C/W
T <sub>JA</sub>	Package θ <sub>JA</sub>	25-ball WLCSP	-	54.6	-	°C/W
T <sub>JC</sub>	Package θ <sub>JC</sub>	25-ball WLCSP	-	0.5	-	°C/W

**Table 40. Solder Reflow Peak Temperature**

Package	Maximum Peak Temperature	Maximum Time at Peak Temperature
All	260 °C	30 seconds

**Table 41. Package Moisture Sensitivity Level (MSL), IPC/JEDEC J-STD-020**

Package	MSL
All except WLCSP	MSL 3
25-ball WLCSP	MSL 1

Figure 8. 32-pin QFN ((5.0 × 5.0 × 0.55 mm) 3.5 × 3.5 mm E-Pad (Sawn)) Package Outline, 001-42168

SYMBOL	DIMENSIONS		
	MIN.	NOM.	MAX.
A	0.50	0.55	0.60
A1	-	0.020	0.045
A2	0.15 BSC		
D	4.90	5.00	5.10
D2	3.40	3.50	3.60
E	4.90	5.00	5.10
E2	3.40	3.50	3.60
L	0.30	0.40	0.50
b	0.18	0.25	0.30
e	0.50 TYP		

NOTES:

1.  HATCH AREA IS SOLDERABLE EXPOSED PAD
2. BASED ON REF JEDEC # MO-248
3. PACKAGE WEIGHT: 0.0388g
4. DIMENSIONS ARE IN MILLIMETERS

001-42168 \*F

## Acronyms

**Table 42. Acronyms Used in this Document**

Acronym	Description
abus	analog local bus
ADC	analog-to-digital converter
AG	analog global
AHB	AMBA (advanced microcontroller bus architecture) high-performance bus, an ARM data transfer bus
ALU	arithmetic logic unit
AMUXBUS	analog multiplexer bus
API	application programming interface
APSR	application program status register
ARM®	advanced RISC machine, a CPU architecture
ATM	automatic thump mode
BW	bandwidth
CAN	Controller Area Network, a communications protocol
CMRR	common-mode rejection ratio
CPU	central processing unit
CRC	cyclic redundancy check, an error-checking protocol
DAC	digital-to-analog converter, see also IDAC, VDAC
DFB	digital filter block
DIO	digital input/output, GPIO with only digital capabilities, no analog. See GPIO.
DMIPS	Dhrystone million instructions per second
DMA	direct memory access, see also TD
DNL	differential nonlinearity, see also INL
DNU	do not use
DR	port write data registers
DSI	digital system interconnect
DWT	data watchpoint and trace
ECC	error correcting code
ECO	external crystal oscillator
EEPROM	electrically erasable programmable read-only memory
EMI	electromagnetic interference
EMIF	external memory interface
EOC	end of conversion
EOF	end of frame
EPSR	execution program status register
ESD	electrostatic discharge

**Table 42. Acronyms Used in this Document (continued)**

Acronym	Description
ETM	embedded trace macrocell
FIR	finite impulse response, see also IIR
FPB	flash patch and breakpoint
FS	full-speed
GPIO	general-purpose input/output, applies to a PSoC pin
HVI	high-voltage interrupt, see also LVI, LVD
IC	integrated circuit
IDAC	current DAC, see also DAC, VDAC
IDE	integrated development environment
I <sup>2</sup> C, or IIC	Inter-Integrated Circuit, a communications protocol
IIR	infinite impulse response, see also FIR
ILO	internal low-speed oscillator, see also IMO
IMO	internal main oscillator, see also ILO
INL	integral nonlinearity, see also DNL
I/O	input/output, see also GPIO, DIO, SIO, USBIO
IPOR	initial power-on reset
IPSR	interrupt program status register
IRQ	interrupt request
ITM	instrumentation trace macrocell
LCD	liquid crystal display
LIN	Local Interconnect Network, a communications protocol.
LR	link register
LUT	lookup table
LVD	low-voltage detect, see also LVI
LVI	low-voltage interrupt, see also HVI
LVTTL	low-voltage transistor-transistor logic
MAC	multiply-accumulate
MCU	microcontroller unit
MISO	master-in slave-out
NC	no connect
NMI	nonmaskable interrupt
NRZ	non-return-to-zero
NVIC	nested vectored interrupt controller
NVL	nonvolatile latch, see also WOL
opamp	operational amplifier
PAL	programmable array logic, see also PLD
PC	program counter
PCB	printed circuit board

**Table 42. Acronyms Used in this Document** *(continued)*

Acronym	Description
PGA	programmable gain amplifier
PHUB	peripheral hub
PHY	physical layer
PICU	port interrupt control unit
PLA	programmable logic array
PLD	programmable logic device, see also PAL
PLL	phase-locked loop
PMDD	package material declaration data sheet
POR	power-on reset
PRES	precise power-on reset
PRS	pseudo random sequence
PS	port read data register
PSoC®	Programmable System-on-Chip™
PSRR	power supply rejection ratio
PWM	pulse-width modulator
RAM	random-access memory
RISC	reduced-instruction-set computing
RMS	root-mean-square
RTC	real-time clock
RTL	register transfer language
RTR	remote transmission request
RX	receive
SAR	successive approximation register
SC/CT	switched capacitor/continuous time
SCL	I <sup>2</sup> C serial clock
SDA	I <sup>2</sup> C serial data
S/H	sample and hold
SINAD	signal to noise and distortion ratio
SIO	special input/output, GPIO with advanced features. See GPIO.
SOC	start of conversion
SOF	start of frame
SPI	Serial Peripheral Interface, a communications protocol
SR	slew rate
SRAM	static random access memory
SRES	software reset
SWD	serial wire debug, a test protocol
SWV	single-wire viewer
TD	transaction descriptor, see also DMA

**Table 42. Acronyms Used in this Document** *(continued)*

Acronym	Description
THD	total harmonic distortion
TIA	transimpedance amplifier
TRM	technical reference manual
TTL	transistor-transistor logic
TX	transmit
UART	Universal Asynchronous Transmitter Receiver, a communications protocol
UDB	universal digital block
USB	Universal Serial Bus
USBIO	USB input/output, PSoC pins used to connect to a USB port
VDAC	voltage DAC, see also DAC, IDAC
WDT	watchdog timer
WOL	write once latch, see also NVL
WRES	watchdog timer reset
XRES	external reset I/O pin
XTAL	crystal

## Document Conventions

### Units of Measure

Table 43. Units of Measure

Symbol	Unit of Measure
°C	degrees Celsius
dB	decibel
fF	femto farad
Hz	hertz
KB	1024 bytes
kbps	kilobits per second
Khr	kilohour
kHz	kilohertz
kΩ	kilo ohm
ksps	kilosamples per second
LSB	least significant bit
Mbps	megabits per second
MHz	megahertz
MΩ	mega-ohm
Msps	megasamples per second
μA	microampere
μF	microfarad
μH	microhenry
μs	microsecond
μV	microvolt
μW	microwatt
mA	milliampere
ms	millisecond
mV	millivolt
nA	nanoampere
ns	nanosecond
nV	nanovolt
Ω	ohm
pF	picofarad
ppm	parts per million
ps	picosecond
s	second
sps	samples per second
sqrtHz	square root of hertz
V	volt

Description Title: PSoC® 4: PSoC 4000S Datasheet, Programmable System-on-Chip (PSoC®) Document Number: 002-00123			
Revision	ECN	Submission Date	Description of Change
**	4883809	08/28/2015	New data sheet.
*A	4992376	10/30/2015	Removed 20-ball WLCSP package related information in all instances across the document. Added 25-ball WLCSP package related information in all instances across the document. Updated <a href="#">Pinouts</a> : Updated <a href="#">Table 1</a> . Updated <a href="#">Electrical Specifications</a> : Updated <a href="#">Analog Peripherals</a> : Updated <a href="#">Comparator</a> : Updated <a href="#">Table 10</a> (Updated details in "Details/Conditions" column corresponding to $V_{ICM3}$ , $I_{CMP3}$ parameters (Added $V_{DD} \geq 2.2V$ at $-40^\circ C$ )). Updated <a href="#">Table 11</a> (Updated details in "Details/Conditions" column corresponding to TRESP3 parameter (Added $V_{DD} \geq 2.2V$ at $-40^\circ C$ )). Updated <a href="#">CSD and IDAC</a> : Updated <a href="#">Table 13</a> . Updated <a href="#">Ordering Information</a> : Updated part numbers.
*B	5037826	12/08/2015	Changed status from Advance to Preliminary.
*C	5104369	01/27/2016	Updated <a href="#">Packaging</a> : Updated <a href="#">Table 39</a> (Replaced TBD with values for Theta $J_A$ and Theta $J_C$ parameters). Updated <a href="#">Package Diagrams</a> : Replaced TBD with spec 002-09957 **. Added Errata.
*D	5139206	02/16/2016	Updated to new template.
*E	5173961	03/15/2016	Updated <a href="#">Pinouts</a> : Updated <a href="#">Table 1</a> . Updated <a href="#">Electrical Specifications</a> : Updated <a href="#">Device Level Specifications</a> : Updated <a href="#">XRES</a> : Updated <a href="#">Table 8</a> (Updated all values corresponding to $R_{PULLUP}$ parameter). Updated <a href="#">Table 9</a> (Updated all values corresponding to $T_{RESETWAKE}$ parameter). Updated <a href="#">Analog Peripherals</a> : Updated <a href="#">CSD and IDAC</a> : Updated <a href="#">Table 12</a> . Updated <a href="#">10-bit CapSense ADC</a> : Updated <a href="#">Table 13</a> . Updated <a href="#">Memory</a> : Updated <a href="#">Flash</a> : Updated <a href="#">Table 24</a> (Updated all values corresponding to $T_{ROWERASE}$ , $T_{ROWPROGRAM}$ parameters).
*F	5268662	05/12/2016	Updated <a href="#">Pinouts</a> : Updated <a href="#">Alternate Pin Functions</a> : Updated <a href="#">Table 2</a> . Updated <a href="#">Electrical Specifications</a> : Updated <a href="#">Analog Peripherals</a> : Updated <a href="#">CSD and IDAC</a> : Updated <a href="#">Table 12</a> (Updated all values corresponding to IDAC1INL, IDAC2INL, SNR, IDAC1CRT1, IDAC1CRT12, IDAC1CRT22, IDAC1CRT32, IDAC2CRT1, IDAC2CRT12, IDAC2CRT22, IDAC2CRT32, IDACMISMATCH2, IDACMISMATCH3 parameters). Updated <a href="#">10-bit CapSense ADC</a> : Updated <a href="#">Table 13</a> (Updated all values corresponding to A_SND parameter). Removed Errata. Updated to new template.

Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress shall have no liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. CYPRESS DOES NOT REPRESENT, WARRANT, OR GUARANTEE THAT CYPRESS PRODUCTS, OR SYSTEMS CREATED USING CYPRESS PRODUCTS, WILL BE FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION (collectively, "Security Breach"). Cypress disclaims any liability relating to any Security Breach, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any Security Breach. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. "High-Risk Device" means any device or system whose failure could cause personal injury, death, or property damage. Examples of High-Risk Devices are weapons, nuclear installations, surgical implants, and other medical devices. "Critical Component" means any component of a High-Risk Device whose failure to perform can be reasonably expected to cause, directly or indirectly, the failure of the High-Risk Device, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any use of a Cypress product as a Critical Component in a High-Risk Device. You shall indemnify and hold Cypress, its directors, officers, employees, agents, affiliates, distributors, and assigns harmless from and against all claims, costs, damages, and expenses, arising out of any claim, including claims for product liability, personal injury or death, or property damage arising from any use of a Cypress product as a Critical Component in a High-Risk Device. Cypress products are not intended or authorized for use as a Critical Component in any High-Risk Device except to the limited extent that (i) Cypress's published data sheet for the product explicitly states Cypress has qualified the product for use in a specific High-Risk Device, or (ii) Cypress has given you advance written authorization to use the product as a Critical Component in the specific High-Risk Device and you have signed a separate indemnification agreement.

Cypress, the Cypress logo, Spansion, the Spansion logo, and combinations thereof, WICED, PSoC, CapSense, EZ-USB, F-RAM, and Traveo are trademarks or registered trademarks of Cypress in the United States and other countries. For a more complete list of Cypress trademarks, visit [cypress.com](http://cypress.com). Other names and brands may be claimed as property of their respective owners.
