

PACSR48010

48V Output AC/DC Converter, Module Package

FEATURES

- Full Load Efficiency up to 94% @220VAC
- Metal Case Box Type Package
- Package Dimension: 110.8x50.8x13.7mm (4.33"x2.00"x0.54")
- Operating Baseplate Temperature Range -40°C to +100°C
- Input Brown-Out, Output OCP, OTP, OVP, SHORT protection
- 3000VAC Isolation
- RoHS Compliant
- CE Mark
- EMC compatible: CISPR22 ClassB (with external EMC filter)
- ISO 9001, ISO 14001 certified manufacturing facility
- UL/cUL 60950-1 (US & Canada)
- Surge immunity(with external EMC filter): AC: ±1 kV differential mode AC: ±2 kV common mode

The PACSR48010, a wide input voltage range of 85~265VAC, and single isolated output converter, is the latest product offering from a world leader in power systems technology and manufacturing — Delta Electronics, Inc. Such module type ACDC converter can provide 500W, 48V regulated DC output voltage with full load efficiency up to 94% @220Vac; the PACSR48010 offers Brown-out, output OCP, OTP, OVP and Short protections, and allows a wide operating baseplate temperature range of -40° C to $+100^{\circ}$ C. With creative design technology and optimization of component placement, this converter possesses outstanding electrical and thermal performance, as well as high reliability under extremely harsh operating conditions.

(All specifications valid base on the connection of figure 10, unless otherwise indicated)

INPUT CHARACTERISTIC	S				
Item	Condition	Min.	Тур.	Max.	Unit
Rated input voltage range		100	110/220	240	VAC
Max input voltage range		85		265	VAC
Input voltage frequency range		45	50/60	65	Hz
Maximum Input Current	Vin=85VAC, 85% Load			6.3	A
Input PF value	Vin=110VAC, 100% Load	0.95			
Allowable bus capacitance range NOTE(1)	Vin=110/220VAC 100% Load	660		1000	uF
OUTPUT CHARACTERIST	ICS				•
Item	Conditions	Min.	Тур.	Max.	Unit

==Note==

- (1) About the bus cap., please find details in section "SIMPLIFIED APPLICATION CIRCUIT".
- (2) About the min. and max. output cap., please find details in section "SIMPLIFIED APPLICATION CIRCUIT".
- (3) The testing conditions of TCT cycle are as follows:
- 1.1 Temperature Range: -40°C±3°C ~125°C±3°C
 - 1.2 Dwell time: 30min
 - 1.3 Ramp rate: 20°C/min.
 - 1.4 Cycling: 200 cycles
 - 1.5 Units shall be unpowered
- (4) The THB test starts with a pre-conditioning soak of all units for 72hrs under the following conditions:
 - 2.1 Unpowered
 - 2.2 Ambient temperature: 85°C
 - 2.3 Relative humidity: 85%
- (5) The THB Testing is performed for 1000hrs under the following conditions:
 - 3.1 Input Voltage: Maximum Voltage
 - 3.2 Output Load: Minimum load
 - 3.3 Ambient temperature: The max rated ambient temperature or 85° C, whichever is less.
 - 3.4 Relative humidity: 85%
- *Specifications are subject to change without notice

==Note==

(1) and (6): About the bus cap., please read the Application Note about the hold up time configure.
(2) and (8): About the min. output cap., please use the cap. which has more performance than the cap. in the table above, or refer the cap. about the output cap. ability in the Application Note.
(2) and (7): About the max. output cap., please follow the Application Note about the output cap. ability.

THERMAL CONSIDERATION

Thermal management is an important part of the system design. To ensure proper, reliable operation, sufficient cooling of the power module is needed over the entire temperature range of the module. Conduction cooling is usually the dominant mode of heat transfer.

Thermal Testing Setup

The following figure shows the testing setup in which the power mudule is mounted on an AI plate and was cooled by cooling liquid.

Figure 11: Thermal test setup

THERMAL DERATING CURVE

The following figure shows the location to monitor the temperature of the module's baseplate. The baseplate temperature in thermal curve is a reference for customer to make thermal evaluation and make sure the module is operated under allowable temperature. (Thermal curves shown in Figure13 are based on different input voltage).

Figure 12: Baseplate's temperature measured point

NDTE1

FOR MODULES WITH THROUGH-HOLE PINS AND THE OPTIONAL HEAT SPREADER, THEY ARE INTENDED FOR WAVE SOLDERING ASSEMBLY ON TO SYSTEM BOARDS. PLEASE DO NOT SUBJECT SUCH MODULES THROUGH REFLOW TEMPERATURE PROFILE.

NDTE2

AT THESE FOUR HOLES POSITION, IT SHOULD USE SCREWS TO FIX THE POWER MODULE ON CUSTOMER SYSTEM BOARD.

SOLDERING METHOD

Generally, as the most common mass soldering method for the solder attachment, wave soldering is used for through-hole power modules and reflow soldering is used for surface-mount ones. Delta recommended soldering methods and process parameters are provided in this document for solder attachment of power modules onto system board. SAC305 is the suggested lead-free solder alloy for all soldering methods. The soldering temperature profile presented in this document is based on SAC305 solder alloy.

Reflow soldering is not a suggested method for through-hole power modules due to many process and reliability concerns. If you have this kind of application requirement, please contact Delta sales or FAE for further confirmation.

Wave Soldering (Lead-free)

Delta's power modules are designed to be compatible with single-wave or dual wave soldering. The suggested soldering process must keep the power module's internal temperature below the critical temperature of 217°C continuously. The recommended wave-soldering profile is shown below:

Note: The temperature is measured on solder joint of pins of power module.

The typical recommended (for double-side circuit board) preheat temperature is $115+/-10^{\circ}$ C on the top side (component side) of the circuit board. The circuit-board bottom-side preheat temperature is typically recommended to be greater than 135° C and preferably within 100° C of the solder-wave temperature. A maximum recommended preheat up rate is 3° C /s. A maximum recommended solder pot temperature is $255+/-5^{\circ}$ C with solder-wave dwell time of $3\sim6$ seconds. The cooling down rate is typically recommended to be 6° C/s maximum.

Hand Soldering (Lead Free)

Hand soldering is the least preferred method because the amount of solder applied, the time the soldering iron is held on the joint, the temperature of the iron, and the temperature of the solder joint are variable. The recommended hand soldering guideline is listed in Table below. The suggested soldering process must keep the power module's internal temperature below the critical temperature of 217°C continuously.

Parameter	Parameter Single-side Circuit Board		Multi-side Circuit Board
Soldering Iron Wattage Tip Temperature	90₩ 385+/-10℃	90₩ 420+/−10℃	90₩ 420+/−10℃
Soldering Time	2 \sim 6 seconds	4 $^{\sim}$ 10 seconds	4 $^{\sim}$ 10 seconds
