S24SP series
40W Single Output DC/DC Converter

FEATURES

- Efficiency up to 92.8%
- Wide input range, 9V-36V
- Package with Industry Standard Pinout
- Package Dimension:
  Without heat sink
  50.8 x25.4 x10.2mm (2.0" x1.0" x0.40")
  With heat sink
  50.8 x25.4 x17.1mm (2.0" x1.0" x0.67")
- Over voltage protection, hiccup mode
- Over current protection, hiccup mode
- Positive or Negative Remote ON/OFF
- Without tantalum capacitor inside module
- Operating Temperature range - 40°C to +85°C
- Input to Output Isolation: 1500VDC
- RoHS Compliant
- 2 Years Product Warranty
- Heat-sink is option
- EN 50155 Certified
- UL 60950-1 & CSA C22.2 No.60950-1-07

Security Lab Medical Metro Data Center Telecom Industrial Network

The S24SP family, the power (40W) industrial input range 2"X1" isolated power converter whose pinout follows industry standard. The S24SP series comes with a host of industry-standard features, such as over current protection, over voltage protection, over temperature protection and remote on/off. An optional heatsink is available for more extreme thermal requirements. All models have an ultra-wide 4:1 input voltage range (9V to 36V). With operating temperature of -40°C to +85°C, it is suitable for customers' critical applications, such as process control and automation, transportation, data communication and telecom equipment, test equipment, medical device and everywhere where space on the PCB is critical.

Model List

Model Number	Input Voltage (Range)	Output Voltage	Output Current		Input Current (typ input voltage)		Load Regulation	Maxcapacitive Load (Cap ESR>=10mohm;Full load;5%overshoot of Vout at startup)	Efficiency (typ.)
			Max.	Min.	@Max. Load	@No Load			@Max. Load
	VDC	VDC	mA	mA	mA(typ.)	mA(typ.)	mV(max)	uF	%
S24SP05008	24 (9 ~ 36)	5V	8000	0	1795	70	±25	20000	92.8%
S24SP12004		12V	3500	0	1885	60	±60	6000	92.8%
S24SP15003		15V	2700	0	1800	60	±75	4000	93.7%
S24SP24002		24V	1700	0	1835	40	±120	2000	92.5%

Input Characteristics

Item	Model	Min.	Typ.	Max.	Unit
Input Surge Voltage (100 msec)	All Models	---	---	50	VDC
Input Turn-On Voltage Threshold	All Models	8	8.5	9	VDC
Input Turn-Off Voltage Threshold	All Models	7	7.5	8	VDC
Input Under-Voltage Lockout Hysteresis	All Models	0.4	1	1.7	VDC
Off-Converter Input Current	All Models,Vin=24V	---	10	---	mA
Input reflected ripple current	All Models,with 12uH, 20MHz	---	15	30	mA
Reverse Polarity Input Current	All Models	---	---	0.5	A
ON/OFF Control, Logic High	All Models	2.4	---	10	VDC
ON/OFF Control, Logic Low	All Models	-0.7	---	0.8	VDC
Input Filter	All Models	Internal LC Filter			

Output Characteristics

Item	Conditions	Min.	Typ.	Max.	Unit
Output Voltage Accuracy		---	---	±1	%Vo
Line Regulation	Vin=9V to 36V	---	---	±0.2	%Vo
Total Output Voltage Range	Over Load, Line and Temperature	---	---	±3	%Vo
Ripple & Noise (Note 2)	Vin=24V, Full Load	---	70	---	mV$_{P-P}$
Dynamic load response	5V module 50%-75% full load, 0.1A/uS	---	4	---	%Vo
	12V,15V,24V module 50%-75% full load, 0.1A/uS	---	2	---	
Output Over Current Protection	Output Voltage 10% Low, Hiccup	110	---	230	%Io,max
Short Output Protection	Long Term, Auto-recovery				
Output Over-Voltage Protection	Hiccup, Auto-recovery	115	---	140	%Vo
Output Trim Range	Pout ≦ max rated power, Io ≦ Io.max	-10	---	+10	%Vo

General Characteristics

Item	Conditions	Min.	Typ.	Max.	Unit
I/O Isolation Voltage (rated)		---	---	1500	VDC
I/O Isolation Resistance		10	---	---	MΩ
I/O Isolation Capacitance		---	2200	---	pF
Switching Frequency		---	330	---	KHz

Environmental Specifications

Parameter	Conditions	Min.	Max.	Unit
Operating Temperature Range (with Derating)	Ambient	-40	+85	℃
Case Temperature(9Vin/24Vin/36Vin)		---	95/105/105	℃
Storage Temperature Range		-50	+125	℃
Humidity (non condensing)		---	95	% rel. H
NTC Shutdown Temperature		125		℃
Cooling		Natural Convection		

EMC Specifications

| Parameter	Standards & Level	Performance
EMI	EN55022	Class A (EMI filter circuit see page 9, layout and EMI considerations)
ESD	EN61000-4-2 air ± 8KV , Contact ± 6KV	Perf. Criteria A
Radiated immunity	EN61000-4-3 20V/m	Perf. Criteria A
Fast transient (Note 4)	EN61000-4-4 ±2KV	Perf. Criteria A
Surge (Note 4)	EN61000-4-5 ±1KV	Perf. Criteria A
Conducted immunity	EN61000-4-6 10V/m	Perf. Criteria A

Thermal Derating Curves (No Heat Sink and With Heat Sink)

S24SP 40W Series Output Power vs. Ambient Temperature at Natural Convection (Encapsulation)

S24SP 40W Series Output Power vs. Ambient Temperature at Natural Convection (Encapsulation, With 0.27" Height Heat Sink)

Notes

1   Specifications typical at Ta=+25℃, resistive load, nominal input voltage and rated output current unless otherwise noted.

2   Ripple & Noise measurement bandwidth is 0-20MHz, with 10μF, tantalum capacitor and 1μF ceramic capacitor.

3   DC/DC converters should be externally fused at the front end for protection.

4   The external circuit is the same with EMI filter circuit. (EMI filter circuit as page 9 showing)
## ELECTRICAL CHARACTERISTICS CURVES - S24SP05008, 9-36VIN, 5V/8A

*Efficiency vs. load current for various input voltage at 25°C.*

Power dissipation vs. load current at 25°C.

Turn-on transient at full load current (10ms/div).
*Top Trace: Vout; 1.5V/div; Bottom Trace: ON/OFF input: 2V/div.*

Turn-on transient at full load current (10ms/div).
*Top Trace: Vout; 1.5V/div; Bottom Trace: input voltage: 10V/div.*

Output voltage ripple at nominal input voltage and max load current (20mV/div, 2us/div)
Load cap: 10μF, tantalum capacitor and 1μF ceramic capacitor.
*Bandwidth: 20MHz.*

## ELECTRICAL CHARACTERISTICS CURVES - S24SP12004, 9-36VIN, 12V/3.5A

Efficiency vs. load current for various input voltage at 25°C.

Power dissipation vs. load current at 25°C.

Turn-on transient at full load current (20ms/div).
Top Trace: Vout; 5V/div; Bottom Trace: ON/OFF input: 5V/div.

Turn-on transient at full load current (20ms/div).
Top Trace: Vout; 3V/div; Bottom Trace: input voltage: 30V/div.

Output voltage ripple at nominal input voltage and max load current (20mV/div, 2us/div)
Load cap: 10µF, tantalum capacitor and 1µF ceramic capacitor.
Bandwidth: 20MHz.

ELECTRICAL CHARACTERISTICS CURVES - S24SP15003, 9-36VIN, 15V/2.7A

Efficiency vs. load current for various input voltage at 25℃.

Power dissipation vs. load current at 25℃.

Turn-on transient at full load current (20ms/div).

Turn-on transient at full load current (20ms/div).
*Top Trace: Vout; 5V/div; Bottom Trace: input voltage: 8V/div.*

Output voltage ripple at nominal input voltage and max load current (20mV/div, 2us/div)
Load cap: 10µF, tantalum capacitor and 1µF ceramic capacitor.
*Bandwidth: 20MHz.*

## ELECTRICAL CHARACTERISTICS CURVES - S24SP24002, 9-36VIN, 24V/1.7A

Efficiency vs. load current for various input voltage at 25°C.

Power dissipation vs. load current at 25°C..

Turn-on transient at full load current (10ms/div).
Top Trace: Vout; 5V/div; Bottom Trace: ON/OFF input: 1V/div.

Turn-on transient at full load current (10ms/div).
*Top Trace: Vout; 5V/div; Bottom Trace: input voltage: 10V/div.*

Output voltage ripple at nominal input voltage and max load current (20mV/div, 2us/div)
Load cap: 10µF, tantalum capacitor and 1µF ceramic capacitor.
Bandwidth: 20MHz.

DESIGN CONSIDERATIONS
Input Source Impedance

The impedance of the input source connecting to the DC/DC power modules will interact with the modules and affect the stability. A low ac-impedance input source is recommended. If the source inductance is more than a few µH, we advise a 100µF electrolytic capacitor mounted close to the input of the module to improve the stability.
Input Reflected Ripple Current

Test set-up diagram showing measurement points for Input Terminal Ripple Current and Input Reflected Ripple Current.
Measured input reflected-ripple current with a simulated source Inductance (LTEST) of 12 µH. Capacitor Cs offset possible battery impedance.

Input Terminal Ripple Current, ic, at full rated output current and nominal input voltage with 12µH source impedance and 100µF electrolytic capacitor (250 mA/div, 4us/div).

Input reflected ripple current, is, through a 12µH source inductor at nominal input voltage and rated load current (25 mA/div, 4us/div)
Output Ripple Noise

Output voltage ripple test setup.
Load capacitance: 1µF ceramic capacitor and 10µF tantalum capacitor. Bandwidth: 20 MHz. Scope measurements should be made using a BNC cable (length shorter than 20 inches). Position the load between 51 mm to 76 mm (2 inches to 3 inches) from the module.

DESIGN CONSIDERATIONS

Layout and EMI considerations

Delta's DC/DC power modules are designed to operate in a wide variety of systems and applications. For design assistance with EMC compliance and related PWB layout issues, please contact Delta's technical support team. An external input filter module is available for easier EMC compliance design. Below is the reference design for an input filter to pass EN55022 (VDE0878) class A (both q. peak and average).

EMI filter circuit

Cin=100uF/50V;Nippon chemi-con,ESR 85 mohm
L1=4.7uH;PCMC063T-4R7MN

C1=6.8uF/50V/1812/MLCC

CY1=6.8nF/2KV/1210/MLCC

Test Result:

At T = +25°C, Typical input voltage and full load.

Recommended PCB Layout

It is suggested to use multiple layers PCB and large size copper on system board which connects to pins of module, that can achieve better thermal performance.

FEATURES DESCRIPTIONS

Over-Current Protection

The modules include an internal output over-current protection circuit, which will endure current limiting for an unlimited duration during output overload. If the output current exceeds the OCP set point, the modules will shut down (hiccup mode).

The modules will try to restart after shutdown. If the overload condition still exists, the module will shut down again. This restart trial will continue until the overload condition is corrected.

Over-Voltage Protection

The modules include an internal output over-voltage protection circuit, which monitors the voltage on the output terminals. If this voltage exceeds the over-voltage set point, the modules will shut down, and then restart after a hiccup-time (hiccup mode).

If latch mode is needed, please contact with Delta.
Over-Temperature Protection

The over-temperature protection consists of circuitry that provides protection from thermal damage. If the temperature exceeds the over-temperature threshold the module will shut down.The module will restart after the temperature is within specification.

Remote On/Off

The remote on/off feature on the module can be either negative or positive logic depend on the part number options on the last page.

❖ For Negative logic version, turns the module on during a external logic low and off during a logic high. If the remote on/off feature is not used, please short the on/off pin to Vi (-).
❖ For Postive logic version, turns the modules on during a external logic high and off during a logic low. If the remote on/off feature is not used, please leave the on/off pin to floating.

Remote on/off can be controlled by an external switch between the on/off terminal and the Vi (-) terminal. The switch can be an open collector or open drain.

Remote on/off implementation
Output Voltage Adjustment (TRIM)

Only single output modules have output adjust function.

To increase the output voltage set point, connect an external resistor between the TRIM pin and the Vout(-).
To decrease the output voltage set point, connect an external resistor between the TRIM pin and the Vout(+).

The maximum adjust range is ±10%, the TRIM pin should be left open if this feature is not used.
For 5V single output (Kohm):

For 12V single output (Kohm):

For 15V signle output (Kohm):

For 24V single output (Kohm):

For example:

When need trim up to 5.2V, then the external resistor should be 95.2Kohm between trim pin and Vout- pin.

When need trim down to 4.9V, then the external resistor should be 291.2Kohm between trim pin and Vout+ pin.
THERMAL CONSIDERATIONS

Thermal de-rating curve is a standard for customer to make thermal evaluation and make sure the module's components are operated under allowed temperature. The module's cooling condition is natural convection. In thermal de-rating curve, if we know the module's input voltage and output power we can find the allowed maximum ambient temperature.

The module's case temperature is a reference to make thermal evaluation. If the case temperature exceed the allowed maximum value, the moldule may probably have thermal issue.

Mechanical Drawing(without heat sink)

Mechanical Dimensions		Pin Connections	

Pin	Function
1	Vin+
2	Vin-
3	On/off
4	Trim
5	Vout-
6	Vout+

Physical outline

Case Size: 50.8*25.4*10.2(2.0"*1.0"*0.4")

Case material: Al alloy, anodize black

Baseplate material: Non-conductive FR-4

Pin material: Brass; finish: Matte Tin plating and Nickel under plating

Pin length: refer part numbering system

Weight: 34grams

- All dimensions in mm (inches)
- Tolerance: X.X±0.5 (X.XX±0.02)
  X.XX±0.25 (X.XXX±0.010)
- Pins Diameter : ±0.10(±0.004)

Mechanical Drawing(with heat sink)

Mechanical Dimensions		Physical Outline	

1	Heat sink
	Material: Al-6063
	Finish: anodize black
	Weight: 10.3grams
2	Model weight: 46grams

- All dimensions in mm (inches)
- Tolerance: X.X±0.5 (X.XX±0.02)
 X.XX±0.25 (X.XXX±0.010)

Note:
1. add heat sink to help heat dissipation and increase reliability of convert operating at high ambient temperature
2. please refer derating curve while upgrate the operating temperature of converter

Application notice:

For modules with through-hole pins, they are intended for wave soldering assembly onto system boards; please do not subject such modules through reflow temperature profile.
