

Product card: PLA MATT filament for 3D printing

**Product description:** PLA MATT filament – is a thermoplastic polyester in a form of fiber, used for 3D-printing using the FFF method. Filament wound on a spool, vacuum packed with a moisture absorber. The spool contains 1kg of net material. It can be used in all FFF printers that are not protected from external suppliers and open source structures before using. PLA MATT is biodegradable material produced from renewable natural resources. The material is characterized by low processing shrinkage and a matt surface.
