

Digital Green-Mode Synchronous Rectifier

1 Description

The iW873 is a high performance synchronous rectifier controller with integrated MOSFET and driver for flyback converters operating at discontinuous conduction mode. It emulates the diode rectifier at the secondary side of the flyback to reduce conduction loss. The iW873 determines the timing of the driver by sensing the voltage across the $R_{DS(ON)}$ of the built-in MOSFET to achieve lossless sensing. Proprietary digital adaptive turn-off control technology is used to minimize the turn-off deadtime of the synchronous rectifier so that the parallel Schottky diode required by conventional synchronous rectifiers can be eliminated. The integrated driver has strong driving capability for high efficiency. The operating power consumption of the controller excluding the driver is less than 4mW at no load to achieve the ultra-low no-load power consumption for 5V applications. The iW873 integrates a pulse linear regulator to maintain the operation of the synchronous rectifier at low system output voltage when the system is operating in constant current (CC) mode.

2 Features

- Integrated 60V power MOSFET

- Wide V_{IN} pin operating voltage up to 25V
- Intelligent low power management achieves ultra-low no-load operating current
- Lossless MOSFET V_{DS} sensing for SR timing control
- 8-pin SOIC package

3 Applications

- Compact AC/DC adapters/chargers for media tablets and smart phones

Pin No.	Pin Name	Type	Pin Description
1	OUT	Power Output	Synchronous rectifier MOSFET driver output and the gate of the integrated MOSFET. Leave this pin open if not used.
2	DRAIN	Power Input	Synchronous rectifier MOSFET Drain.
3	DRAIN	Power Input	Synchronous rectifier MOSFET Drain.
4	DRAIN	Power Input	Synchronous rectifier MOSFET Drain.
5	GND	Ground	Synchronous rectifier MOSFET source and controller ground.
6	GND	Ground	Synchronous rectifier MOSFET source and controller ground.
7	V _{CC}	Power Input	IC power supply and output of LDO and PLR output. Connect this pin to a capacitor.
8	V _{IN}	Analog Input	Input of the internal LDO and system output voltage sensing circuit. Connects to adapter/charger output for bias voltage. The internal LDO clamps the V _{CC} voltage at 5V. It is also the input for the comparator to enable PLR and the comparator to enable SR operation.
