# CONNECTPORT<sup>®</sup> TS 4X4

Provides serial over Ethernet connectivity and acts as an Ethernet switch in conjunction with a serial port server

Digi's ConnectPort TS 4x4 device servers provide serial device network connectivity and remote Ethernet switch capability. Supporting multiple serial and Ethernet ports, this product is ideal for laboratory, utility, traffic, retail and POS, industrial automation, banking and many more applications.

Digi's patented RealPort<sup>®</sup> software establishes a connection between the server and networked serial devices, creating a local COM/TTY port on the server. RealPort technology allows almost any software application to work with Digi networked device servers without modification.

Configuration and management is available through an integrated and secure web user interface as well as a powerful Command Line Interface (CLI) option.

The Python<sup>®</sup> development environment built into the ConnectPort TS 4x4 enables application customization. This easy-to-use, universal programming language allows complete control of device connections, data manipulation and event based actions.

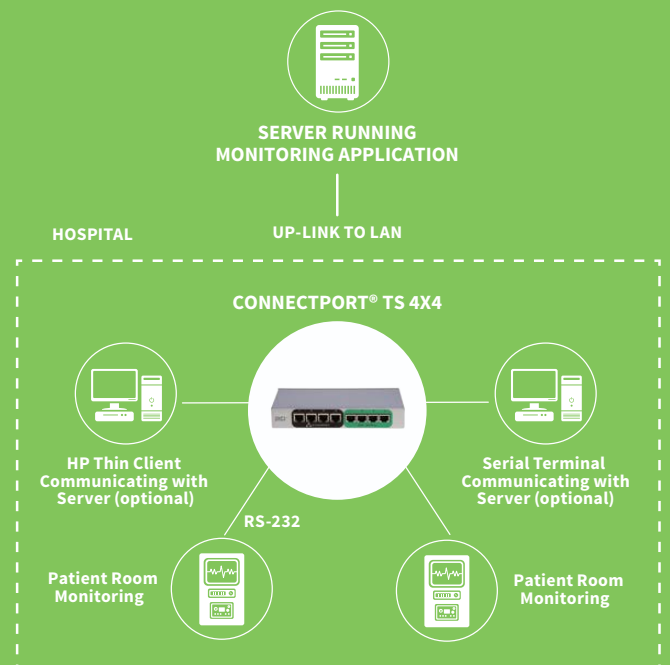

## BENEFITS

- Flexibility with standard Ethernet and serial ports
- Easy-to-use Python development environment for custom applications
- Patented RealPort technology for COM/TTY port control and management
- Simple device integration into centralized network management systems through SNMPv2
- SSL/TLS and SSHv2 for added security
