USB-1208HS Series 13-Bit Multifunction High Speed DAQ Devices

All USB-1208HS Series devices provide eight singled-ended or four differential analog inputs at up to a 1 MS/s sampling rate, and 16 digital I/O.

Overview

USB-1208HS Series devices are low-cost, 13-bit devices that offer four differential (DIFF) or eight single-ended (SE) analog inputs, 16 digital I/O channels, two counter inputs, and one timer output. A digital trigger lets you start analog input or output conversions.

The USB-1208HS-2AO includes two analog outputs and the USB-1208HS-4AO includes four analog outputs.

Analog Input

Each device supports software-selectable ranges from ± 5 V to ± 20 V in differential mode, and software-selectable ranges from ± 2.5 V to ± 10 V, and 0 V to 10 V in single-ended mode.

Sample Rate

USB-1208HS Series devices can sample at a maximum of 1 MS/s in hardware paced mode.

External Clock I/O

Each device has an external clock input terminal that supports input signals up to 1 MHz to pace A/D conversions from an external source.

The USB-1208HS-2AO/USB-1208HS-4AO also have an external clock input terminal that supports input signals up to 1 MHz to pace D/A conversions from an external source.

Each device has a clock output terminal to output the A/D sampling clock. The USB-1208HS-2AO/USB-1208HS-4AO also have a clock output terminal to output the D/A sampling clock.

Analog Output

The USB-1208HS-2AO provides two 12-bit analog outputs, and the USB-1208HS-4AO provides four 12-bit analog outputs. The output range is ± 10 V. Each output can update at a maximum rate of 1 MS/s.

Digital I/O

Users can program each of the 16 TTL-level digital I/O lines for either input or output.

Each USB-1208HS Series device has a userconfigurable internal jumper to configure the digital bits for pull-up or pull-down (default).

Features

- Up to 8 analog inputs
- 13-bit resolution
- Sample rates up to 1 MS/s
- Up to 4 analog outputs
- 16 digital I/O lines
- Two 32-bit counters
- One timer output
- USB bus powered

Supported Operating Systems

- Windows[®] 10/8/7/Vista[®]XP, 32/64-bit
- Linux®

Counter Input

Each device supports two 32-bit TTL-level counters that accept frequency inputs of up to 20 MHz.

Timer Output

USB-1208HS Series devices include a pulse width modulation (PWM) timer output with a software-selectable frequency range up to 20 MHz.

Calibration

USB-1208HS Series devices are factorycalibrated using a NIST-traceable calibration process. Specifications are guaranteed for one year. For calibration beyond one year, return the device to the factory for recalibration.
