## Description

The AP2205 series is a positive voltage regulator IC fabricated by high voltage EPNP process.

The AP2205 has features of wide input voltage range, high accuracy, high ripple rejection, low dropout voltage, low noise, current limit and ultra-low quiescent current which make it ideal for use in various USB and portable devices.

The IC consists of a voltage reference, an error amplifier, a resistor network for setting output voltage, a current limit circuit for current protection, and a chip enable circuit, a low power shutdown mode for extended battery life, over current protection, over temperature protection, as well as reversed-battery protection.

The AP2205 has $1.5 \mathrm{~V}, 1.8 \mathrm{~V}, 2.5 \mathrm{~V}, 2.8 \mathrm{~V}, 3.0 \mathrm{~V}, 3.3 \mathrm{~V}, 5.0 \mathrm{~V}$ fixed voltage versions and adjustable voltage version.

The AP2205 is available in space-saving SOT25 and SOT89 packages.

Notes: 5. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.
6. $\theta_{\mathrm{JA}}$ is measured with the component mounted on a 2-Layer FR-4 PCB board with $1.5 \mathrm{~cm} * 1.5 \mathrm{~cm}$ thermal sink pad in free air.
