## Description

The AP1509 series are monolithic IC designed for a stepdown DC/DC converter, and own the ability of driving a 2A load without additional transistor. It saves board space. The external shutdown function can be controlled by logic level and then come into standby mode. The internal compensation makes feedback control having good line and load regulation without external design. Regarding protected function, thermal shutdown is to prevent over temperature operating from damage, and current limit is against over current operating of the output switch. If current limit function occurs and $\mathrm{V}_{\mathrm{FB}}$ is down below 0.5 V , the switching frequency will be reduced. The AP1509 series operates at a switching frequency of 150 KHz thus allow smaller sized filter components than what would be needed with lower frequency switching regulators. Other features include a guaranteed $\pm 4 \%$ tolerance on output voltage under specified input voltage and output load conditions, and $\pm 15 \%$ on the oscillator frequency. The output version included fixed $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$, and an adjustable type. The chips are available in a standard 8-lead SOP-8 package.

## Features

- Output Voltage: 3.3V, $5 \mathrm{~V}, 12 \mathrm{~V}$ and Adjustable Output Version
- Adjustable Version Output Voltage Range, 1.23V to 18V+4\%
- $150 \mathrm{KHz}+15 \%$ Fixed Switching Frequency
- Voltage Mode Non-Synchronous PWM Control
- Thermal-Shutdown and Current-Limit Protection
- ON/OFF Shutdown Control Input
- Operating Voltage can be up to 22 V
- Output Load Current: 2A
- SOP-8L Packages
- Low Power Standby Mode
- Built-in Switching Transistor On Chip
- SOP-8L: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/ RoHS Compliant (Note 1)

## Pin Assignments

## Applications

- Simple High-Efficiency Step-Down Regulator
- On-Card Switching Regulators
- Positive to Negative Converter

Notes: 1. EU Directive 2002/95/EC (RoHS). All applicable RoHS exemptions applied. Please visit our website at http://www.diodes.com/products/lead_free.html.

## Typical Application Circuit

(1) Fixed Type Circuit

## (2) Adjustable Type Circuit

$$
\begin{gathered}
V_{\mathrm{OUT}}=\mathrm{V}_{\mathrm{FB}} \times\left(1+\frac{\mathrm{R} 1}{\mathrm{R} 2}\right) \\
\mathrm{V}_{\mathrm{FB}}=1.23 \mathrm{~V} \\
\mathrm{R} 2=1 \mathrm{~K} \sim 3 \mathrm{~K}
\end{gathered}
$$

(3) Delay Start Circuit

## Pin Descriptions

| Pin Name | Description |

## Functions Description

## Pin Functions

$+\mathrm{V}_{\text {IN }}$
This is the positive input supply for the IC switching regulator. A suitable input bypass capacitor must be presented at this pin to minimize voltage transients and to supply the switching currents needed by the regulator.

## Ground

Circuit ground.

## Output

Internal switch. The voltage at this pin switches between $\left(+\mathrm{V}_{\mathrm{IN}}-\mathrm{V}_{\mathrm{SAT}}\right)$ and approximately -0.5 V , with a duty cycle of approximately $\mathrm{V}_{\text {OUT }} / \mathrm{V}_{\mathbb{I N}}$. To minimize coupling to sensitive circuitry, the PC board copper area connected to this pin should be minimized.

## Feedback

Senses the regulated output voltage to complete the feedback loop.

## SD

Allows the switching regulator circuit to be shutdown using logic level signals thus dropping the total input supply current to approximately 150 uA . Pulling this pin below a threshold voltage of approximately 1.3V turns the regulator on, and pulling this pin above 1.3 V (up to a maximum of 18 V ) shuts the regulator down. If this shutdown feature is not needed, the SD pin can be wired to the ground pin.

## Thermal Considerations

The SOP-8L package needs a heat sink under most conditions. The size of the heat sink depends on the input voltage, the output voltage, the load current and the ambient temperature. The AP1509 junction temperature rises above ambient temperature for a 2 A load and different input and output voltages. The data for these curves was taken with the AP1509 (SOP-8L package) operating as a buck-switching regulator in an ambient temperature of $25^{\circ} \mathrm{C}$ (still air). These temperature increments are all approximate and are affected by many factors. Higher ambient temperatures require more heat sinker.

For the best thermal performance, wide copper traces and generous amounts of printed circuit board copper should be used in the board layout (One exception is the output (switch) pin, which should not have large areas of copper). Large areas of copper provide the best transfer of heat (lower thermal resistance) to the surrounding air, and moving air lowers the thermal resistance even further.

Package thermal resistance and junction temperature increments are all approximate. The increments are affected by a lot of factors. Some of these factors include board size, shape, thickness, position, location, and even board temperature. Other factors are, trace width, total printed circuit copper area, copper thickness, single or double-sided, multi-layer board and the amount of solder on the board.

The effectiveness of the PC board to dissipate heat also depends on the size, quantity and spacing of other components on the board, as well as whether the surrounding air is still or moving. Furthermore, some of these components such as the catch diode will add heat to the PC board and the heat can vary as the input voltage changes. For the inductor, depending on the physical size, type of core material and the DC resistance, it could either act as a heat sink taking heat away from the board, or it could add heat to the board.

## Ordering Information

| Device | Package | Packaging | 13" Tape and Reel |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Code <br> (Note 2) |  | Quantity |  |

Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.
Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

## LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
