## Description

Pericom Semiconductor's PI2PCIE412-D is an 8 to 4 differential channel multiplexer/demultiplexer switch. This solution can switch 2 full PCI Express® lanes to one of two locations. Using a unique design technique, Pericom has been able to minimize the impedance of the switch such that the attenuation observed through the switch is negligible. The unique design technique also offers a layout targeted for PCI Express signals, which minimizes the channel to channel skew as well as channel to channel crosstalk as required by the PCI Express specification.

## Application

Switch a PCIe® lane output between two PCI Express lane inputs.

## Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

| Storage Temperature | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| :---: | :---: |
| Supply Voltage to Ground Potential | - 0.5 V to +2.5 V |
| DC Input Voltage | .. -0.5 V to $\mathrm{V}_{\mathrm{DD}}$ |
| DC Output Current | ..... 120 mA |
| Power Dissipation ....... | 0.5 W |

Note: Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Notes:

1. $\mathrm{C}_{\mathrm{L}}=$ Load capacitance: includes jig and probe capacitance.
2. $\mathrm{R}_{\mathrm{T}}=$ Termination resistance: should be equal to $\mathrm{Z}_{\mathrm{OUT}}$ of the Pulse Generator
3. Output 1 is for an output with internal conditions such that the output is low except when disabled by the output control. output 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
4. All input impulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{R}} \leq 2.5 \mathrm{~ns}, \mathrm{t}_{\mathrm{F}} \leq 2.5 \mathrm{~ns}$.
5. The outputs are measured one at a time with one transition per measurement.
