Lead-free Green

## Features

$\rightarrow$ CMOS Technology for Bus and Analog Applications
$\rightarrow$ Low On-Resistance: $0.8 \Omega$ at 3.0 V
$\rightarrow$ Wide $\mathrm{V}_{\mathrm{CC}}$ Range: 1.65 V to 5.5 V
$\rightarrow$ Rail-to-Rail Signal Range
$\rightarrow$ Control Input Overvoltage Tolerance: 5.5 V
$\rightarrow$ Fast Transition Speed: 2ns at 5.0 V
$\rightarrow$ High Bandwidth: 200 MHz
$\rightarrow$ Extended Industrial Temperature Range: $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
$\rightarrow$ I/O pins Has Power-off Protection Function
$\rightarrow$ Totally Lead-Free \& Fully RoHS Compliant (Notes 1 \& 2)
$\rightarrow$ Halogen and Antimony Free. "Green" Device (Note 3)
$\rightarrow$ Packaging ( Pb -free \& Green):

- 5-pin SOT23
- 5-pin SC70

## Applications

$\rightarrow$ Cell Phones
$\rightarrow$ PDAs
$\rightarrow$ Portable Instrumentation
$\rightarrow$ Battery powered Communications
$\rightarrow$ Computer Peripherals

## Description

The PI5A3166 is a high-bandwidth, fast single-pole singlethrow (SPST) CMOS switch. It can be used as an analog switch or as a low-delay bus switch. The device features ultra low RON of $0.8 \Omega$ typical at 3.0 V VCC and will operate over the wide VCC range of 1.65 V to 5.5 V .
The PI5A3166 features very low quiescent current even when the control voltage is lower than the VCC supply. This feature services the mobile handset applications very well by allowing direct interface with baseband processor general purpose I/Os. The control input, $S$, is independent of supply voltage.

## Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## Recommended Operating Conditions

## Notes:

1. Measured by voltage drop between $A$ and $B$ pins at the indicated current through the device. ON resistance is determined by the lower of the voltages on two ports (A or B).
2. Flatness is defined as difference between maximum and minimum value of ON resistance over the specified range of conditions Guaranteed by design.

## LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the
failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
