PI5A392A

Precision Wide Bandwidth Quad Analog Switches

## Features

$\rightarrow$ Single-Supply Operation ( +2 V to +6 V )
$\rightarrow$ Rail-to-Rail Analog Signal Range
$\rightarrow$ Low On-Resistance (6-ohm typ @ 5V) Minimizes Distortion and Error Voltages
$\rightarrow$ Ron Matching Between Channels, 0.4-ohm typ
$\rightarrow$ On-Resistance Flatness, 2-ohm typ
$\rightarrow$ Low Charge Injection. $\mathrm{Q}=4 \mathrm{pC}$ typ. Reduces Step errors, "clicking, popping" noise
$\rightarrow$ High Speed. ton, 10 ns typ
$\rightarrow$ Very Low Crosstalk: -72dB @ 30 MHz
$\rightarrow$ Wide -3dB Bandwidth: $>200 \mathrm{MHz}$
$\rightarrow$ High-Current Channel Capability: $>100 \mathrm{~mA}$
$\rightarrow$ TTL/CMOS Logic Compatible
$\rightarrow$ Low Power Consumption ( $0.5 \mu \mathrm{~W}$ typ)
$\rightarrow$ Pin-compatible with DG3XX, DG4XX, MAX39X
$\rightarrow$ Packaging ( Pb -free \& Green):

- 16-pin QSOP (Q)

## Description

The 392A is a monolithic analog switches designed for low-voltage, single-supply operation. This high-precision device is ideal for low-distortion audio, video, signal switching and routing applications.
The PI5A392A has four normally open (NO) switches. Each switch conducts current equally well in either direction when on. When off they block voltages up to the power-supply rails.
The 392 A is fully specified with +5 V , and +3.3 V supplies. With +5 V , they guarantee $<12$-ohm on-resistance. On-resistance matching between channels is within 2 -ohm. On-resistance flatness is less than 4ohm over the full signal range. The PI5A39X family guarantees fast switching speeds ( $\mathrm{tON}<20 \mathrm{~ns}$ ).
This product is available in the 16-pin QSOP package for operation over the industrial $(-40 \mathrm{oC}$ to $+85 \mathrm{oC})$ temperature range.

## Applications

$\rightarrow$ Audio, Video Switching and Routing
$\rightarrow$ Battery-Powered Communication Systems
$\rightarrow$ Computer Peripherals
$\rightarrow$ Telecommunications
$\rightarrow$ Portable Instrumentation
$\rightarrow$ Mechanical Relay Replacement

## Absolute Maximum Ratings

| Parameter | Min. | Max. | Units |
| :--- | :---: | :---: | :---: |
| Storage Temperature | -65 | 150 | ${ }^{\circ} \mathrm{C}$ |
| Ambient Temperature with Power Applied | -40 | 85 | ${ }^{\circ} \mathrm{C}$ |
| Supply Voltage to Ground Potential | -0.5 | 7.0 | V |
| DC Input Voltage | -0.5 | 0.5 | V |
| DC Output Current |  | 120 | mA |
| Power Dissipation |  | 0.5 | W |

Stress beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.
DC Characteristics (Over the Operating Range, $\mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}, \mathrm{V} \mathrm{CC}=5 \mathrm{~V} \pm 10 \%, \mathrm{GND}=0 \mathrm{~V}$ )

| Parameters | Description | Test Conditions ${ }^{(1)}$ | Min. | Typ. | Max. | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| D | Distortion $\triangle$ RON/RL ${ }^{(2)}$ | $\mathrm{R}_{\mathrm{L}}=100$ ohm |  | 2 |  | \% |
| Q | Charge Injection | $\mathrm{C}_{\mathrm{L}}=1 \mathrm{nF}, \mathrm{V}_{\mathrm{Gen}}=0 \mathrm{~V}$ |  | 3 | 10 | pC |

## Notes:

1. For conditions shown as Max or Min, use appropriate value specified under Electrical Characteristics for applicable device type.
2. $\Delta \mathrm{R}_{\mathrm{ON}}=\Delta \mathrm{R}_{\mathrm{ON} \text { max }}-\mathrm{R}_{\mathrm{ON} \text { min }}$.
3. Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

## Applications

Figure 1. Programmable Integrator and Sample/Hold

The 5A39X can be used to insert various capacitors $\left(C_{1}, C_{2}\right)$ and set proper $R C$ times for integration. Resistors $R_{1}$ and $R_{2}$ set initial gain. The $\mathrm{R}_{\mathrm{IN}}$ resistor $\mathrm{X}_{1}$ or $\mathrm{C}_{2}$ sets the RC time. The reset switch discharges the hold capacitor through $\mathrm{R}_{\mathrm{IN}}$.

## LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the
failure of the life support device or to affect its safety or effectiveness.
Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
