0.6V ADJUSTABLE PRECISION SHUNT REGULATOR

Description

The ZXRE060 is a 5-terminal adjustable shunt regulator offering excellent temperature stability and output handling capability. The ZXRE060 simplifies the design of isolated low voltage DC-DC regulators. With its low 0.6V FB pin, it can control the regulation of rails as low 0.6V. This makes it ideal for state of the art microprocessor/DSP and PLD core voltage POL converters.

The device open-collector output can operate from 0.2V to 18V and regulated output voltage can be set by selection of two external divider resistors.

Separating the input from the open collector output enables the ZXRE060 to be used to make low-cost low drop-out regulators operating at low input voltages.

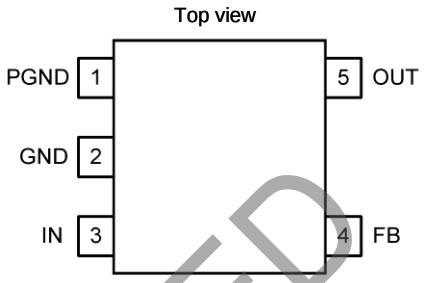
The ZXRE060 is available in two grades with initial tolerances of 0.5% and 1% for the A and standard grades respectively. It is available in space saving low profile 5 pin SC70-5/SOT353, thin TSOT23-5 and very small DFN1520H4-6 packages.

The ZXRE060 in TSOT23-5 has its OUT, GND and FB pins matching the Cathode, Anode and reference pins of the TL432 and TLV431 in SOT23-3, thereby facilitating simple upgrade paths.

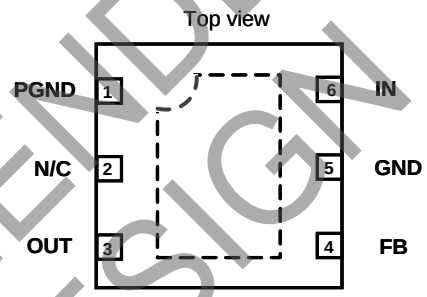
Features

- Low Reference Voltage (V_{FB} = 0.6V)
- -40 to +125ºC Temperature Range
- Reference Voltage Tolerance at +25°C
  - 0.5% ZXRE060A
  - 1% ZXRE060
- Typical Temperature Drift
  - <4mV (0°C to +70°C)
  - <6mV (-40°C to +85°C)
  - <12mV (-40°C to +125°C)
- 0.2V to 18V Open-collector Output
- High Power Supply Rejection
  - >45dB at 300kHz
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**

Pin Assignments



SC70-5/SOT353, TSOT23-5



Exposed flag floating or connect to GND

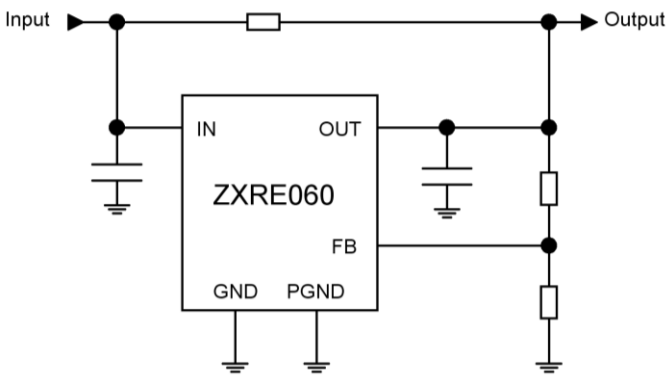
DFN1520H4-6

Applications

- Isolated DC-DC Converters
- Core Voltage POL
- Low Voltage Low-Dropout Linear Regulators
- Shunt Regulators
- Adjustable Voltage Reference

Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
2. See https://www.diodes.com/quality/lead-free/ for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

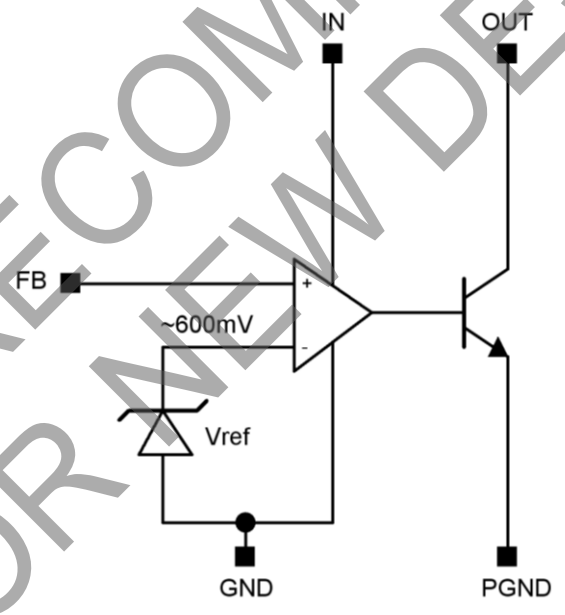
Typical Application Circuit



Pin Description

Pin Number (SC70-5 /SOT353, TSOT23-5)	Pin Number (DFN1520H4-6)	Pin Name	Function
1	1	PGND	Power Ground: Ground return for emitter of output transistor: Connect PGND and GND together.
—	2	N/C	No connection
5	3	OUT	Output. Connect a capacitor close to device between OUT and GND. See the Applications Information section.
4	4	FB	Feedback Input. Regulates to 600mV nominal.
2	5	GND	Analog Ground: Ground return for reference and amplifier: Connect GND and PGND together.
3	6	IN	Supply Input. Connect a 0.1µF ceramic capacitor close to the device from IN to GND.
—	Flag	—	Floating or connect to GND

Function Block Diagram



The ZXRE060 differs from most other shunt regulators in that it has separate input and output pins and a low voltage reference. This enables it to regulate rails down to 600mV and makes the part ideal for isolated power supply applications that use opto-couplers in the feedback loop and where the open-collector output is required to operate down to voltages as low as 200mV.

The wide input voltage range of 2V to 18V and output voltage range of 0.2V to 18V enables the ZXRE060 to be powered from an auxiliary rail, while controlling a master rail which is above the auxiliary rail voltage, or below the minimum V_{IN} voltage. This allows it to operate as a low-dropout voltage regulator for microprocessor/DSP/PLD cores.

As with other shunt regulators (and shunt references), the ZXRE060 compares its internal amplifier FB pin to a high accuracy internal reference; if FB is below the reference then OUT turns off, but if FB is above the reference then OUT sinks current – up to a maximum of 15mA.

Absolute Maximum Ratings (Voltages to GND Unless Otherwise Stated)

Symbol	Parameter	Rating	Unit
V_{IN}	IN Voltage relative to GND	20	V
V_{OUT}	OUT Voltage relative to GND	20	V
V_{FB}	FB Voltage relative to GND	20	V
P_{GND}	PGND Voltage relative to GND	-0.3 to +0.3	V
I_{OUT}	OUT Pin Current	20	mA
T_J	Operating Junction Temperature	-40 to +150	°C
T_{ST}	Storage Temperature	55 to +150	°C

These are stress ratings only. Operation outside the absolute maximum ratings may cause device failure. Operation at the absolute maximum rating for extended periods may reduce device reliability.

Semiconductor devices are ESD sensitive and may be damaged by exposure to ESD events. Suitable ESD precautions should be taken when handling and transporting these devices.

Package Thermal Data

Package	θ_{JA}	P_{DIS} T_A = +25°C, T_J = +150°C
SC70-5/SOT353	400°C/W	310mW
TSOT23-5	250°C/W	500mW
DFN1520H4-6	TBD	TBD

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V_{IN}	IN Voltage Range (0 to +125°C)	2	18	V
V_{IN}	IN Voltage Range (-40 to 0°C)	2.2	18	
V_{OUT}	OUT Voltage Range	0.2	18	
I_{OUT}	OUT Pin Current	0.3	15	mA
T_A	Operating Ambient Temperature Range	-40	+125	°C

Electrical Characteristics (@T_A = +25°C, V_{IN} = 3.3V, V_{OUT} = V_{FB}, I_{OUT} = 5mA, unless otherwise stated. (Note 4))

Application Information

The following show some typical application examples for the ZXRE060. It is recommended to include the compensation capacitor C2 to guarantee stability. C2 may range in value from 0.1µF to 10µF depending on the application. The time constant formed by C2 and R3 should be greater than 1ms multiplied by the feedback factor R2/(R1 + R2).

Both C1 and C2 should be as close to the ZXRE060 as possible and connected to it with the shortest possible track. In the case of Figure 8 and Figure 9, it means the opto-coupler will have to be carefully positioned to enable this.

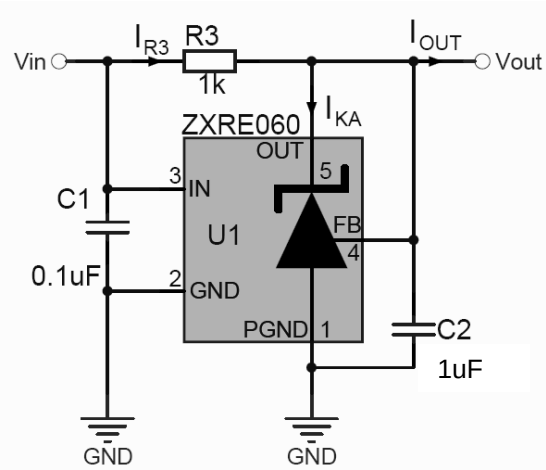

Figure 2. 0.6V Shunt Regulator

$V_{OUT} = V_{REF}$

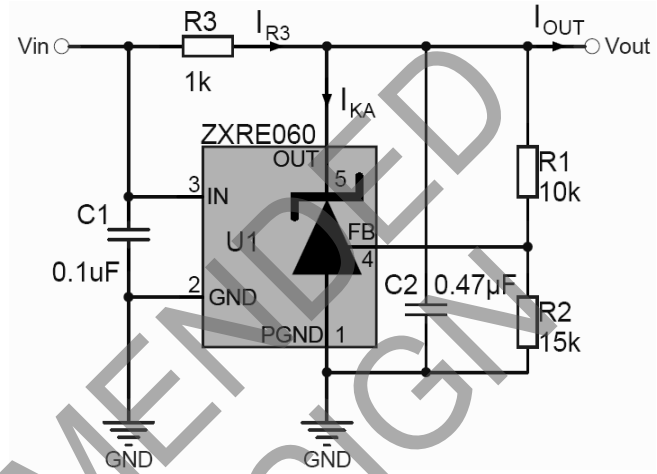

Figure 3. 1.0V Shunt Regulator

$V_{OUT} = V_{REF}\left(1+\frac{R1}{R2}\right)$

$R3 = \frac{V_{IN} - V_{OUT}}{I_{R3}}$

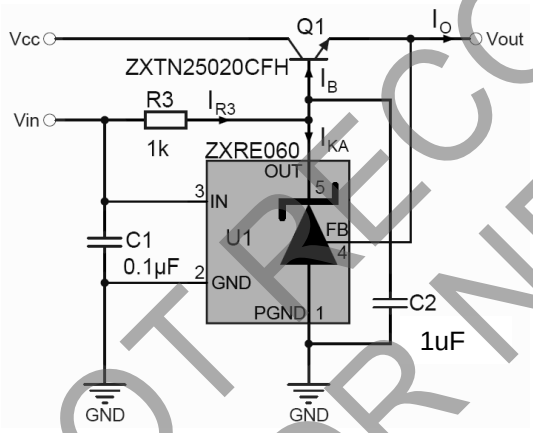

Figure 4. 0.6V series LDO regulator

$V_{OUT} = V_{REF}$

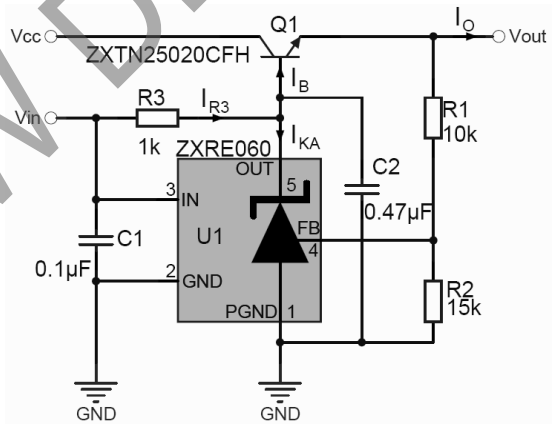

Figure 5. 1.0V series LDO regulator

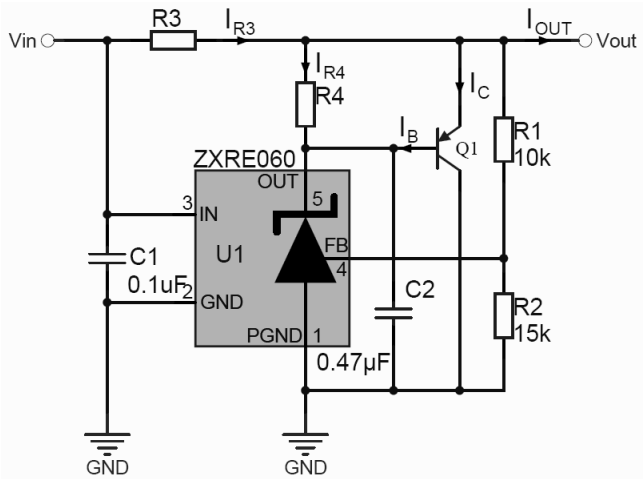
$V_{OUT} = V_{REF}\left(1+\frac{R1}{R2}\right)$

Design Guides

1. Determine I_{OUT} and choose a suitable transistor taking power dissipation into consideration.
2. Determine I_B from $I_B = \frac{I_{OUT(max)}}{(h_{FE(min)} + 1)}$
3. Determine I_{R3} from $I_{R3} \geq I_B + I_{KA(min)}$. The design of the ZXRE060 effectively means there is no $I_{KA(min)}$ limitation as in conventional references. There is only an output leakage current which is a maximum of 1µA. Nevertheless, it is necessary to determine an $I_{KA(min)}$ to ensure that the device operates within its linear range at all times. $I_{KA(min)} \geq 10\mu A$ should be adequate for this.
4. Determine R3 from $R3 = \frac{V_{IN} - (V_{OUT} + V_{BE})}{I_{R3}}$.
5. Although unlikely to be a problem, ensure that $I_{R3} \leq 15mA$.

Application Information (Cont.)



$$V_{OUT} = V_{REF}\left(1+\frac{R1}{R2}\right)$$

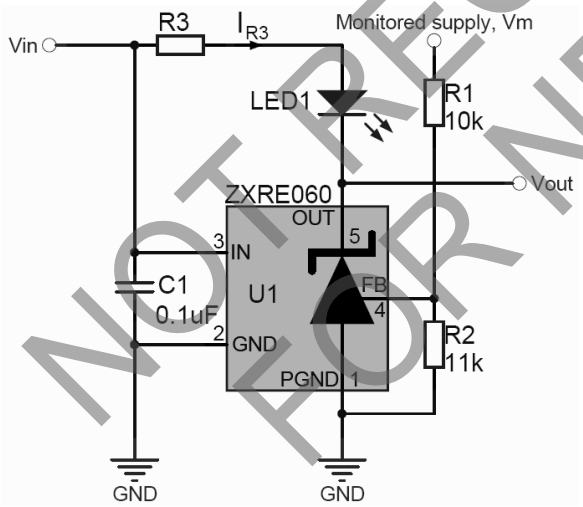
$$(V_{OUT} \geq 0.2V + V_{BE})$$

$$R3 = \frac{V_{IN} - V_{OUT}}{I_{R3}}$$

Figure 6. 1V Current-boosted Shunt Regulator

Design Guides

1. Determine I_{OUT} and choose a suitable transistor taking power dissipation into consideration.
2. Determine I_B from $I_B = \frac{I_{OUT(max)}}{(h_{FE(min)}+1)}$
3. Determine I_{R3} from $I_{R3} = I_{OUT(max)}$
4. Determine R3 from $R3 = \frac{V_{IN} - V_{OUT}}{I_{R3}}$
5. It is best to let the ZXRE060 supply as much current as it can before bringing Q1 into conduction. Not only does this minimise the strain on Q1, it also guarantees the most stable operation. Choose a nominal value between 10mA and <15mA for this current, I_{R4}.
6. Calculate R4 from $R4 = \frac{V_{BE}}{I_{R4}}$



V_{OUT} goes low and LED is lit when monitored supply

$$V_M > V_{REF}\left(1+\frac{R1}{R2}\right)$$

$$R3 = \frac{V_{IN} - (V_F + 0.2)}{I_{R3}}$$

$$15mA \geq I_{R3} \leq I_{F(MAX)}$$

V_F and I_F are forward voltage drop and current of LED1.

Figure 7. 1.15V Over-voltage Indicator

Application Information (Cont.)

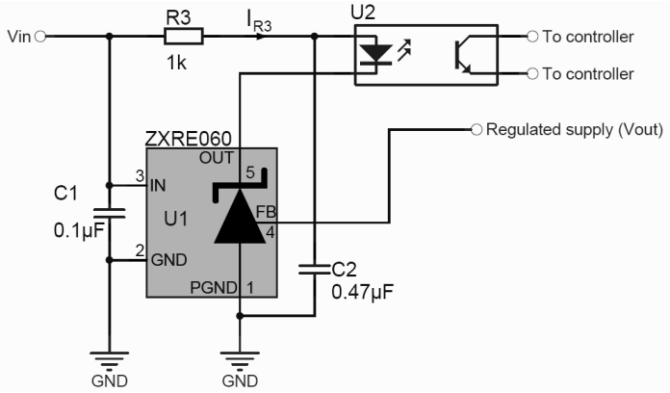


Figure 8. Opto-isolated 0.6V Shunt Regulator

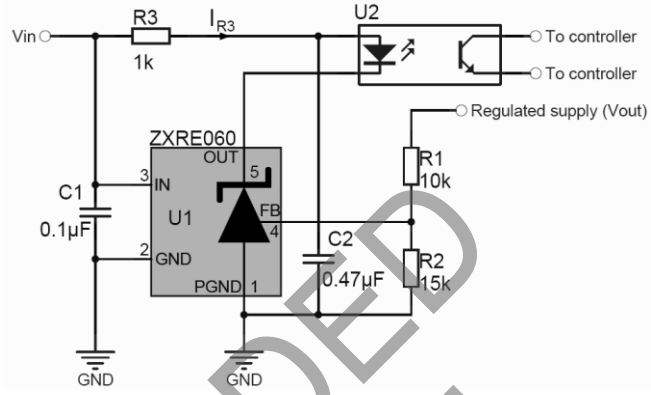

Figure 9. Opto-isolated 1.0V Shunt Regulator

$$V_{OUT} = V_{REF}$$

$$V_{OUT} = V_{REF}\left(1+\frac{R1}{R2}\right)$$

$$R3 = \frac{V_{IN} - (V_F + 0.2)}{I_{R3}}$$

$$15mA \geq I_{R3} \leq I_{F(MAX)}$$

V_F and I_F are forward voltage drop and forward current respectively for the optocoupler LED.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
