## **1. Precautions in use of LCM**

### **1.1 Use Modules**

1. When modules switch on or off, after accessing positive supply power with  $5\pm 0.5$  voltage, then input signal levels, if signal levels input before supply power becomes stable or switches off, IC circuits off, modules will be damaged, as a result modules will be damaged.
2. Dot matrix modules are high path –number LCDs, they are largely related to the contrast, view angle, driving voltage when displaying, so you should adjust it to get best contrast and view angle, if it is too high, not only displays are effected, but also let life shorted.
3. When using under regulated working temperature below, the display responsiveness it too slow, when using under regulated temperature above, whole display surface turns dark, this is not damaged, when the temperature returns normal, all displays become normal

### **1.2 Module storage**

1. Storing temperature:  $-30\sim+80^{\circ}\text{C}$
2. Place in dark sites to avoid strong lights
3. Don't place other thing on their surfaces
4. Packaged in polyer materials (with anti-static electricity layers) and sealed

### **1.3 Soldering**

1. Iron head temperature:  $280\pm 10^{\circ}\text{C}$
2. Soldering time:  $<3-4\text{S}$
3. Soldering material: eutectic nature, low melting point
4. Don't use acid solder
5. Soldering don't repeat above 3 times
