***OLED-MODULE***

**DEP 128032F-W**

**2,0“ - OLED**

Product Specification

Ver.: 0

29.06.2018

# 1. Revision History

<b>VERSION</b>	<b>DATE</b>	<b>REVISED PAGE NO.</b>	<b>Note</b>
0	29.06.2018		First Release

# **Contents**

1. Module Classification Information
2. Interface Pin Function
3. Counter Drawing & Block Diagram
4. Absolute Maximum Ratings
5. Electrical Characteristics
6. Optical Characteristics
7. OLED Lifetime
8. Reliability
9. Inspection specification
10. Precautions in use of OLED Modules

# **1. General Specification**

The Features is described as follow:

- Module Dimension: 59.00 x 18.86 x 1.41 mm
- Active Area: 50.535 x 10.695 mm
- Dot Matrix: 128 x 32 Dots
- Pixel Size: 0.370 x 0.310 mm
- Pixel Pitch: 0.395 x 0.335 mm
- Display Mode: Passive Matrix
- Duty: 1/32 Duty
- Display Color: White
- IC: SSD1315
- Interface: 8Bits 68xx 80xx/ SPI/ I2C
- Size: 2.0 Inch

## 2. Interface Pin Function

No.	Symbol	Function
1	NC	No connection
2	VCC	Power supply for panel driving voltage. This is also the most positive power voltage supply pin. When charge pump is enabled, a capacitor should be connected between this pin and VSS.
3	VCOMH	COM signal deselected voltage level. A capacitor should be connected between this pin and VSS.
4.	IREF	This is segment output current reference pin. When external IREF is used, a resistor should be connected between this pin and VSS to maintain the IREF current at 30uA.
5	D7	These are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial interface mode is selected, D0 will be the serial clock input: SCLK; D1 will be the serial data input: SDIN. When I2C mode is selected, D2, D1 should be tied together and serve as SDAout, SDAin in application and D0 is the serial clock input, SCL.
6	D6	
7	D5	
8	D4	
9	D3	
10	D2	
11	D1	
12	D0	
13	E/RD#	This pin is MCU interface input. When 6800 interface mode is selected, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled HIGH and the chip is selected. When 8080 interface mode is selected, this pin receives the Read (RD#) signal. Read operation is initiated when this pin is pulled LOW and the chip is selected. When serial or I2C interface is selected, this pin must be connected to VSS.
14	R/W#	This is read / write control input pin connecting to the MCU interface. When interfacing to a 6800-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Read mode will be carried out when this pin is pulled HIGH (i.e. connect to VDD) and write mode when LOW. When 8080 interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled LOW and the chip is selected. When serial or I2C interface is selected, this pin must be connected to VSS.
15	D/C#	This pin is Data/Command control pin connecting to the MCU. When the pin is pulled HIGH, the data at D[7:0] will be interpreted as data. When the pin is pulled LOW, the data at D[7:0] will be transferred to a command register.

16	RES#	This pin is reset signal input. When the pin is pulled LOW, initialization of the chip is executed. Keep this pin HIGH (i.e. connect to VDD) during normal operation.	
17	CS#	This pin is the chip select input connecting to the MCU. The chip is enabled for MCU communication only when CS# is pulled LOW (active LOW).	
18	NC	No connection	
19	BS2	MCU bus interface selection pins. Select appropriate logic setting as described in the following table. BS2, BS1 and BS0 are pin select	
20	BS1	BS[2:0]	Interface
		000	4 line SPI
		001	3 line SPI
		010	I2C
		110	8-bit 8080 parallel
		100	8-bit 6800 parallel
Note (1) 0 is connected to VSS (2) 1 is connected to VDD			
21	VDD	Power supply pin for core logic operation. This is a voltage supply pin. It must be connected to external source.	
22	NC	No connection	
23	NC		
24	NC		
25	NC		
26	NC		
27	NC		
28	NC		
29	NC		
30	VSS	Ground pin. It must be connected to external ground.	
31	NC	No connection	

### 3. Counter Drawing & Block Diagram

### 3.1 Application Recommendations

Recommended Components :

C5 : 1.0uF

C1, C2 : 4.7uF

Bus Interface Selection: (Must be set the BS[2:0], refer to item 4)

8-Bits 6800 and 8080 parallel, 3 and 4-Wire SPI, I2C

Voltage at IREF = VCC – 3V. For VCC = 8V, IREF = 30uA:

$$R1 = (\text{Voltage at IREF} - \text{VSS}) / \text{IREF}$$

$$= (8 - 3) / 30\mu \approx 166\text{k}\Omega$$

\*For more information, please contact us.

## **4. Absolute Maximum Ratings**

Unless otherwise specified, VSS= 0V

( Ta = 25 °C)

Parameter	Symbol	Min	Typ.	Max	Unit	Notes
Supply Voltage for Logic	VDD	-0.3	-	4	V	1,2
Supply Voltage for Display	VCC	0	-	18	V	1,2
Operating Temperature	TOP	-40	-	+80	°C	-
Storage Temperature	TSTG	-40	-	+85	°C	-

Note 1: All the above voltages are on the basis of “VSS = 0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section6 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

## 5. Electrical Characteristics

### 5.1 DC Electrical Characteristics

Unless otherwise specified, VSS = 0V, VDD = 2.8 - 3.3V (Ta = 25°C)

Items		Symbol	Min.	Typ.	Max.	Unit
Supply Voltage	Logic	VDD	2.8	3.0	3.3	V
	Operating	VCC	7.5	8.0	8.5	V
Input Voltage	High Voltage	V <sub>IH</sub>	0.8 x V <sub>DD</sub>	-	VDD	V
	Low Voltage	V <sub>IL</sub>	0	-	0.2 x VDD	V
Output Voltage	High Voltage	V <sub>OH</sub>	0.9x V <sub>DD</sub>	-	VDD	V
	Low Voltage	V <sub>OL</sub>	0	-	0.1 x VDDIO	V

Symbol	Parameter	Min.	Typ.	Max.	Unit	Condition
ICC	VCC Supply Current	-	11	22	mA	VDD=3V , VCC=8.0, Display 50% ON

**5.2 Initial Code Proposal**

```
void init_oled()
{
    Write_Command(0xAE); // Display Off
    Write_Command(0xD5); //SET DISPLAY CLOCK
    Write_Command(0xF0); //105HZ

    Write_Command(0xA8); // Select Multiplex Ratio
    Write_Command(0x1F); //

    Write_Command(0xD3); //Setting Display Offset
    Write_Command(0x00); //00H Reset

    Write_Command(0x40); //Set Display Start Line

    Write_Command(0x8D); // Set Charge Pump
    Write_Command(0x10); // Endable Charge Pump

    Write_Command(0xA1); //Set Segment Re-Map Default
    //0xA0 (0x00) => column Address 0 mapped to 127
    //0xA1 (0x01) => Column Address 127 mapped to 0

    Write_Command(0xC8); //Set COM Output Scan Direction
    // 0xC0 (0x00) => normal mode (RESET) Scan from COM0 to
    //COM[N-1];Where N is the Multiplex ratio.
    // 0xC8 (0xC8) => remapped mode. Scan from COM[N-1] to
    //COM0;;Where N is the Multiplex ratio.

    Write_Command(0xDA); //Set COM Hardware Configuration
    Write_Command(0x12); //Alternative COM Pin---See IC Spec page 34
    //(0x02)=> A4=0;Sequential COM pin configuration;
    //A5=0;Disable COM Left/Right remap

    Write_Command(0x81); //Set Contrast Control
    Write_Command(0xFF);

    Write_Command(0xD9); //Set Pre-Charge period
    Write_Command(0x22);

    Write_Command(0xDB); //Set Deselect Vcomh level
    Write_Command(0x30);

    Write_Command(0xD3); //OFFSET
    Write_Command(32);
    Write_Command(0xA4); //Entire Display ON
    Write_Command(0xA6); //Set Normal Display
    Write_Command(0xAF); // Display ON
}
```

## 8. Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V) $\theta$	—	160	—	—	deg
	(H) $\phi$	—	160	—	—	deg
Contrast Ratio	CR	Dark	2000:1	—	—	—
Response Time	T rise	—	—	10	—	$\mu$ s
	T fall	—	—	10	—	$\mu$ s
Display with 50% check Board Brightness			60	80	—	cd/m2
CIEx(White)		(CIE1931)	0.26	0.28	0.30	—
CIEy(White)		(CIE1931)	0.30	0.32	0.34	—

## **7. OLED Lifetime**

<b>ITEM</b>	<b>Conditions</b>	<b>Min</b>	<b>Typ</b>	<b>Remark</b>
Operating Lifetime	Ta=25°C / Initial 50% check board brightness Typical Value	20.000 Hrs	-	Note

**Notes:**

1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.

## 8. Reliability

### Content of Reliability Test

Environmental Test			
Test Item	Content of Test	Test Condition	Applicable Standard
High Temperature storage	Endurance test applying the high storage temperature for a long time.	+85°C 240hrs	—
Low Temperature storage	Endurance test applying the low storage temperature for a long time.	-40°C 240hrs	—
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	+80°C 240hrs	—
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-40°C 240hrs	—
High Temperature/ Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	+60°C, 90%RH 240hrs	—
High Temperature/ Humidity Operation	Endurance test applying the high temperature and high humidity Operation for a long time.	+60°C, 90%RH 120hrs	—
Temperature Cycle	Endurance test applying the low and high temperature cycle. 	-40°C / +80°C 30 cycles	—
Mechanical Test			
Vibration test	Endurance test applying the vibration during transportation and using.	Frequency: 10~55Hz amplitude: 1.5mm Time: 0.5hrs/axis Test axis: X, Y, Z	—
Others			
Static electricity test	Endurance test applying the electric stress to the terminal.	Air Discharge model ±4kv, 10 times	—

\*\*\* Supply voltage for OLED system = Operating voltage at 25°C

**Test and measurement conditions**

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at  $23\pm 5^{\circ}\text{C}$ ;  $55\pm 15\%$  RH.
2. All-pixels-on is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

**Evaluation criteria**

1. The function test is OK.
2. No observable defects.
3. Luminance:  $> 50\%$  of initial value.
4. Current consumption: within  $\pm 50\%$  of initial value.

**APPENDIX:**

**RESIDUE IMAGE**

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

## 9. Inspection specification

### Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

### Definition

- 1 Major defect : The defect that greatly affect the usability of product.
- 2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:

Zone A: Active Area

Zone B: Viewing Area except Zone A

Zone C: Outside Viewing Area

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer`s product.

### Inspection Methods

- 1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45° viewing angle, under 25°C ± 5°C.
- 2 The luminance and color coordinate inspection: By SR-3 or BM-7 or the equal Equipments in the dark room, under 25°C ± 5°C.

NO	Item	Criterion	AQL
01	Electrical Testing	1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character, dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect.	0.65
02	Black or white spots on OLED (display only)	2.1 White and black spots on display $\leq 0.25\text{mm}$ , no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm.	2.5

NO	Item	Criterion	AQL																		
03	OLED black spots, white spots, contamination (non-display)	3.1 Round type : As following drawing $\Phi = (x + y) / 2$  <table border="1" data-bbox="683 409 1337 645"> <thead> <tr> <th>SIZE</th> <th>Acceptable QTY</th> <th>Zone</th> </tr> </thead> <tbody> <tr> <td><math>\Phi \leq 0.10</math></td> <td>Accept no dense</td> <td>A+ B,</td> </tr> <tr> <td><math>0.10 &lt; \Phi \leq 0.20</math></td> <td>2</td> <td>A+ B</td> </tr> <tr> <td><math>0.20 &lt; \Phi \leq 0.25</math></td> <td>1</td> <td>A+ B</td> </tr> <tr> <td><math>0.25 &lt; \Phi</math></td> <td>0</td> <td>A+ B</td> </tr> </tbody> </table>	SIZE	Acceptable QTY	Zone	$\Phi \leq 0.10$	Accept no dense	A+ B,	$0.10 < \Phi \leq 0.20$	2	A+ B	$0.20 < \Phi \leq 0.25$	1	A+ B	$0.25 < \Phi$	0	A+ B	2.5

## **10. Precautions in use of OLED Modules**

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, modify its shape or change the components of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Don't operate it above the absolute maximum rating.
- (5) Don't drop, bend or twist OLED display module.
- (6) Soldering: only to the I/O terminals.
- (7) Storage: please storage in anti-static electricity container and clean environment.
- (8) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use fix information for long time in real application.
- (9) Don't use fixed information in OLED panel for long time, that will extend "screen burn" effect time.
- (10) DISPLAY has the right to change the passive components, including R2 and R3 adjust resistors. (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.)
- (11) DISPLAY have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, DISPLAY have the right to modify the version.)

### **10.1 Handling Precautions**

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched. Please be careful when handling the OLED display module.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
  - \* Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent Also, pay attention that the following liquid and solvent may spoil the polarizer:
  - \* Water
  - \* Ketone
  - \* Aromatic Solvents
- (6) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (7) Do not apply stress to the LSI chips and the surrounding molded sections.
- (8) Do not disassemble nor modify the OLED display module.
- (9) Do not apply input signals while the logic power is off.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
  - \* Be sure to make human body grounding when handling OLED display modules.
  - \* Be sure to ground tools to use or assembly such as soldering irons.
  - \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
  - \* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.
- (11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (12) If electric current is applied when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

## 10.2 Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. And, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from DISPLAY. At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.
- (2) If electric current is applied when water drops are adhering to the surface of the OLED display module, when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

**10.3 Designing Precautions**

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, panel damage may be happen.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) When fastening the OLED display module, fasten the external plastic housing section.
- (7) If power supply to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module. Connection (contact) to any other potential than the above may lead to rupture of the IC.
- (8) The limitation of FPC and Film bending.
