1. Scope

This data sheet is to introduce the specification of DT070BTFT-HB active matrix TFT module. It is composed of a color TFT-LCD panel, driver ICs, FPC, and a backlight unit. The 7.0" display area contains 1024 (RGB) x 600 pixels.

As to basic specification of the driver IC, refer to the IC specification and datasheet.

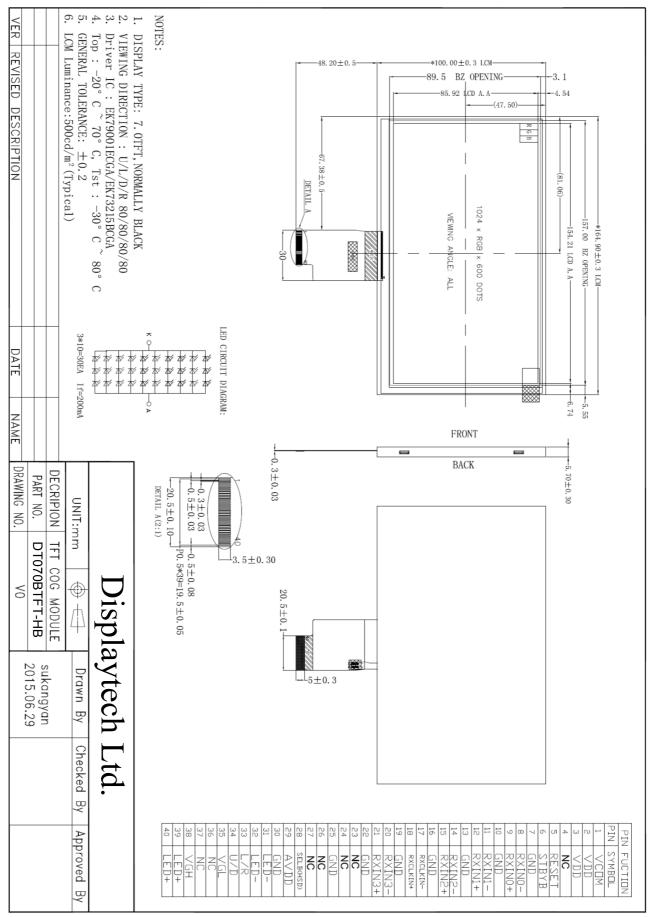

2. Application

Digital equipments which need color display, mobile navigator/video systems.

3. General Information

Item	Contents	Unit
Size	7.0	Inch
Resolution	1024 (RGB) x 600	
Interface	LVDS	
Technology Type	IPS TFT	
Pixel Configuration	R.G.B. Stripe	
Outline Dimension (W x H x D)	164.9 x 100.0 x 5.7	mm
Active Area	154.21 x 85.92	mm
Backlight Type	LED	
Controller / driver	EK79001ECGA/EK73215BCGA	
Weight	TBD	g

6. Absolute Maximum Ratings

6.1 Electrical Absolute Max. Ratings

Parameter	Symbol	Min	Max	Unit	Remark
	VDD	-0.3	5.0	V	
Power oupply veltage	AVDD	-0.5	15.0	V	
Power supply voltage	VGH	-0.3	40.0	V	
	VGL	-20	0.3	V	
Logic signal input / output voltage	VIOVCC	-0.3	VDD+0.5	V	
Current of LED	ILED	0	175	mA	

Notes:

1. If the module is above these absolute maximum ratings. It may become permanently damaged. Using the module within the following electrical characteristic conditions are also exceeded, the module will malfunction and cause poor reliability.

2. Please be sure users are grounded when handing LCD Module.

6.2 Environment (Conditions
-------------------	------------

Item	Symbol	Min	Max	Unit	Remark
Operating Temperature	TOPR	-20	70	°C	
Storage Temperature	TSTG	-30	80	°C	

Notes:

1. The response time will become lower when operated at low temperature.

- 2. Background color changes slightly depending on ambient temperature. The phenomenon is reversible.
- 3. Ta<=40°C :85%RH MAX.

Ta>=40°C : Absolute humidity must be lower than the humidity of 85%RH at 40°C.

Note:

1. The LED Supply Voltage is defined by the number of LED at Ta=25 $^{\circ}$ C and IL =200mA.

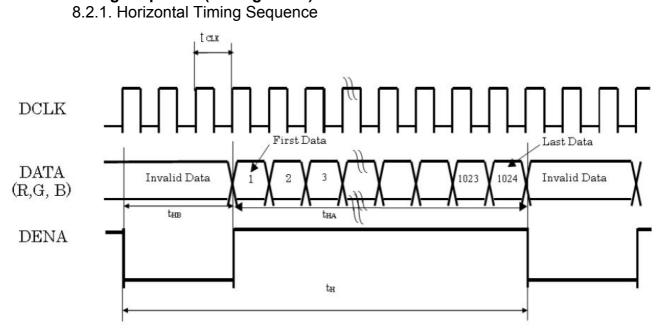

2. The "LED life time" is defined as the module brightness decrease to 50% original brightness at Ta=25°C and IL =140mA. The LED lifetime could be decreased if operating IL is lager than 200mA.

Note 1: Definition of optical measurement system.

Temperature = $25^{\circ}C(\pm 3^{\circ}C)$

LED back-light: ON, Environment brightness < 150 lx

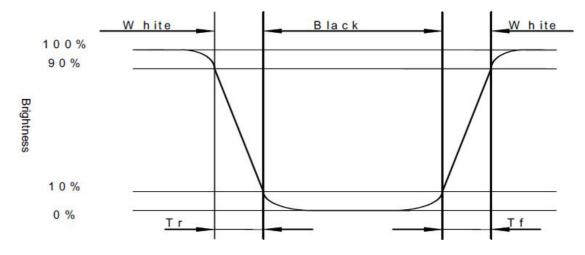

Note 2: Contrast ratio is defined as follow:

Contrast Ratio = $\frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$

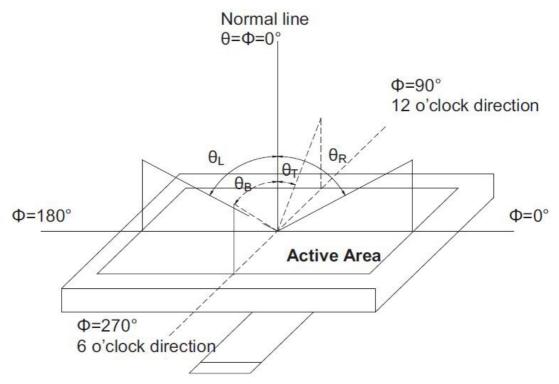

Note 3: Response time is defined as follow:

Response time is the time required for the display to transition from black to white (Rise Time, Tr) and from white to black(Decay Time, Tf).

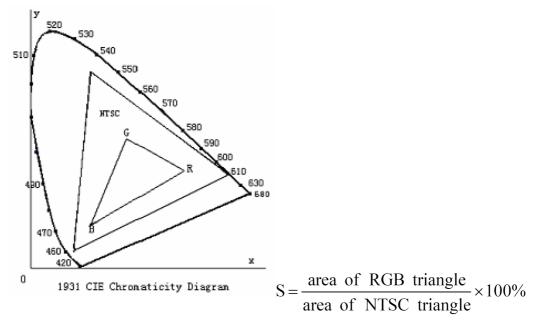

Note 4: Viewing angle range is defined as follow:

Viewing angle is measured at the center point of the LCD.

Note 5: Color chromaticity is defined as follow: (CIE1931)

Color coordinates measured at center point of LCD.

Note 6: Luminance is defined as follow:

Luminance is defined as the brightness of all pixels "White" at the center of display area on optimum contrast.

Note 7: Luminance Uniformity is defined as follow:

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Uniformity (U) = $\frac{\text{Minimum Luminance(brightness) in 9 points}}{\text{Maximum Luminance(brightness) in 9 points}}$

9	Shock (Non-operation)	Half- sine wave, 300m/s ² , 11ms	Per table in below
10	Package Drop Test	Height: 80 cm, 1 corner, 3 edges, 6 surfaces	Per table in below

Inspection	Criterion (after test)	
Appearance	No Crack on the FPC, on the LCD Panel	
Alignment of LCD Panel	No Bubbles in the LCD Panel	
Alignment of LCD Faller	No other Defects of Alignment in Active area	
Electrical current	Within device specifications	
Function / Display	No Broken Circuit, No Short Circuit or No Black line	
	No Other Defects of Display	

11. Precautions for Use of LCD Modules

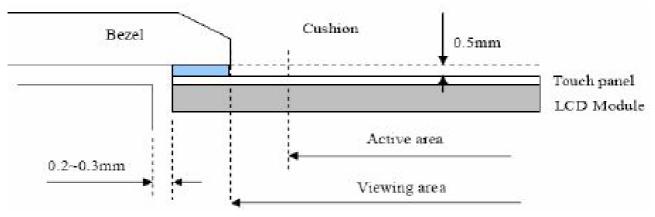

11.1 Safety

The liquid crystal in the LCD is poisonous. Do not put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

- 11.2 Handling
 - A. The LCD and touch panel is made of plate glass. Do not subject the panel to mechanical shock or to excessive force on its surface.
 - B. Do not handle the product by holding the flexible pattern portion in order to assure the Reliability
 - C. Transparency is an important factor for the touch panel. Please wear clear finger sacks, gloves and mask to protect the touch panel from finger print or stain and also hold the portion outside the view area when handling the touch panel.
 - D. Provide a space so that the panel does not come into contact with other components.
 - E. To protect the product from external force, put a covering lens (acrylic board or similar board) and keep an appropriate gap between them.

- F. Transparent electrodes may be disconnected if the panel is used under environmental conditions where dew condensation occurs.
- G. Property of semiconductor devices may be affected when they are exposed to light, possibly resulting in IC malfunctions.
- H. To prevent such IC malfunctions, your design and mounting layout shall be done in the way that the IC is not exposed to light in actual use.
- 11.3 Static Electricity
 - A. Ground soldering iron tips, tools and testers when they are in operation.
 - B. Ground your body when handling the products.
 - C. Power on the LCD module before applying the voltage to the input terminals.
 - D. Do not apply voltage which exceeds the absolute maximum rating.
 - E. Store the products in an anti-electrostatic bag or container.
- 11.4 Storage
 - A. Store the products in a dark place at +25°C±10°C with low humidity (40% RH to 60% RH). Don't expose to sunlight or fluorescent light.
 - B. Storage in a clean environment, free from dust, active gas, and solvent.
- 11.5 Cleaning
 - A. Do not wipe the touch panel with dry cloth, as it may cause scratch.
 - B. Wipe off the stain on the product by using soft cloth moistened with ethanol. Do not allow ethanol to get in between the upper film and the bottom glass. It may cause peeling issue or defective operation. Do not use any organic solvent or detergent other than ethanol.
- 11.6 Cautions for installing and assembling

Bezel edge must be positioned in the area between the Active area and View area. The bezel may press the touch screen and cause activation if the edge touches the active area. A gap of approximately 0.5mm is needed between the bezel and the top electrode. It may cause unexpected activation if the gap is too narrow. There is a tolerance of 0.2 to 0.3mm for the outside dimensions of the touch panel and tail. A gap must be made to absorb the tolerance in the case and connector.
