New DCH 86 A Series for Electric Vehicle / Hybrid Electric Vehicle Applications

DCH 86 A WERE DESIGNED TO LEVERAGE THE ADVANTAGES OF DUCATI HIGH CRYSTALLINITY FILM TECHNOLOGY FOR EV/HEV APPLICATIONS

TECHNICAL ASPECTS

SMART FEATURES

EV/HEV are on the verge of revolutionizing our lives but pose significant challenges to present DC-Link Capacitors' designs: extreme reliability, high operating temperatures and optimal weight/volume targets. DCH 86 A Series leverages the advantages of Ducati's High-Crystallinity Films to reach and exceed these aspiring goals while maintaining the excellent cost/performance ratio of Metallized Polypropylene Film Capacitors.

- Ducati High-Crystallinity Film Technology
- PA66 or TPS Cases
- Dry-Winding – Dry-Potting Technology
- Flat-Wound Element Technology equalizes mechanical stresses and prevents thermal or vibrational degradation
- Special Multi-Core Assembly minimizes field effects for extremely low ESL
- Bare/Tinned Copper or Laminated Busbars for maximum project flexibility
- Proprietary Metallization Pattern/Profiles maximize safety and optimize capacity changes across the useful life

CUSTOMIZED APPROACH

STANDARDS / SPECIFICATIONS

The rapidly evolving technology and market for EV/HEV technologies demand project-specific developments. Ducati Energia studies each specification and mission-profile applying its expertise to provide the most suitable solution for each case

IEC 61071-1, IEC 61071-2
ZVEI B-01 ÷ B-06
UL-STD-94, UL 810

New DC 83 and DCH 83 Series

Ducati, in order to expand its Power Electronic Capacitors' product line, is introducing the new DC83 and DCH 83 series, a DC-Link capacitor in a new prismatic plastic case. The new form factor is designed for common DC-Link applications and the internal design, based on the exclusive Ducati Energia High Crystallinity Film, guarantees high capacity stability while maximizing the current capability. A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL.

New High Performance GPX 84 series

Ducati is proud to introduce the new single-phase, cylindrical AC & DC Capacitor, GPX 84 is the ideal solution for High Performance applications, in terms of high current capability, higher operating temperatures and stable capacity values during its lifecycle.

GPX 84 has got a fortified internal construction based on busbar connections that, alongside the special metallized film used, allows the capacitor to reach high current and high temperatures, while having high stability parameters in terms of capacity.

GPX 84 is designed to be used in high demanding applications. Safety features are based on integrated UL-approved overpressure disconnecto and DRY resin impregnation, in high quality aluminum case.

DC 85 C and DC 86 PS Series with High Temperature & Extended Life Configurations

By using its new High Crystallinity Film Technology Ducati achieved highest in market Capacity Density without compromising the expected performance or imposing hidden operating condition limitations. Now the same technology is applied to the standard-density DC 85 C and DC 86 PS series, thus obtaining a reinforced series with extended operating capabilities:

- Operating (Case) Temperature Range: $-40^{\circ}\text{C} \div 105^{\circ}\text{C}$ without derating
Operating Life Range: 100.000hrs @ UN DC & 90°C HotSpot
- Operating (Case) Temperature Range: $-40^{\circ}\text{C} \div 105^{\circ}\text{C}$ without derating
Operating Life Range: 400.000hrs @ UN DC & 70°C HotSpot
- Ducati High-Crystallinity Film Technology
- Same Dimensions & General Specs as DC 85 C (pages 22) and DC 86 PS (pages 35)

STANDARDS / APPROVAL

Fire and smoke safety testing: EN 45545-2 Approved DC-Link Capacitors

EN 45545-2 is an important international standard that defines a classification system that specifies requirements for fire behavior of materials and products used in trains.

Ducati, is proud to announce that DC-Link capacitors as DC 83, DCH 83, DCH 85 B, DC 86 P, DC 86 PS, DC 89 HC and DC H 85 C/DC 85 C (in 85 and 100 mm diameter) are certified and compliant EN 45545-2, in order to achieve the maximum security level in case of fire on railway vehicles.

MAIN TYPES OF CAPACITORS

| CAPACITOR TYPE | SERIES | APPLICATIONS |
|---|---|---|
|  <p>3-PHASE AC FILTERING</p> | Modulo XD - 416.46 | 3-phase filter/PFC for wind generator / AC filters |
|  <p>GENERAL PURPOSE</p> | GP 42 - 416.42 GP 84 - 416.84 GPX 84 - | switching, high performance lighting, UPS filter, AC-link, resonant circuit, PFC with high harmonics, DC-link, filter |
|  <p>HIGH-DENSITY / HIGH-TEMPERATURE DC APPLICATION</p> | DCH 85C - 416.85.V/H DCH 86 PS - 416.86.V/H | High-Density / High-Temperature DC-Link, Filtering and Storage |
|  <p>DC APPLICATION</p> | DC 85 C/B - 416.85 DC 86 P - 416.86 DC 86 PS - 416.86 DC89 HC - 416.89 DC 88 M - 416.88 DC 45 - 415.45 DC 83 P / DCH 83 | DC-link, filtering and storage |

TYPICAL DC capacitors selection for IGBT power conversion:

DC - series: - DC Application: expressly designed for operation with DC voltage.

GPX - series: - General purpose application: designed for operation both AC and DC voltage.

XD - series: - Three-phases capacitors for harmonic filtering applications and PFC applications.

DUCATI ENERGIA

Capacitor excellence since 1926

DUCATI, founded in 1926 by Ducati brothers, has been among the first in the world to start industrial production of capacitors, and has been a market leader ever since.

Since its foundation, DUCATI Energia has always been in the forefront of technical and industrial development, leading the research shaping today's technology and cooperating to the upgrades and improvements leading to the current IEC and EN Standards for Capacitors.

DUCATI energia firstly introduced the Metallised Polypropylene Film technology and its innovative PPM and PPMh film set the reference for this technology, outclassing the obsolete paper/oil and gas technology in terms of superior performance and reduced dimensions.

Quality

Utmost attention to product quality and customer service are constants in DUCATI's history and the main factors contributing to its success worldwide. DUCATI has always been one of the first companies in its field, in Italy and in Europe, to adopt the most modern standards and procedures in order to assure the highest level of product quality and reliability.

The QUALITY SYSTEM of DUCATI Energia SpA, capacitor division, as described in the Quality Manual, was one of the first in Italy to be approved by the BSI in accordance with ISO 9002 (EN 29002) procedures: Certificate of Registration N. FM22004. DUCATI Energia is fully certified following ISO 9001:2008, ISO 14001:2004 and OHSAS 18001:2007.

All this has been achieved thanks to fully automated and integrated production processes, completely new and innovative machines, production process control methods based on accurate specifications and the assigning of responsibility to operators at all levels.

Capacitors, systems and relays comply with the requirements set forth in EC Directives 73/23 and 93/68 ("Low Voltage Directive"), 89/336 and 92/31 ("Electromagnetic Compatibility Directive").

Nearly all models are certified by international institutes and all are manufactured in full compliance with the requirements of said standards.

DUCATI energia Group main fields of activities are:

- Motor Lighting Capacitors
- Power Electronics Capacitors
- Power Factor Correction Capacitors and Systems (LV and MV)
- Alternators and Ignition Systems
- Electrical Vehicles and Charging Stations for Electrical Vehicles
- Energy Analysers
- Control Systems for energy grids
- Railways Signalling systems
- Ticketing and Transport Automation systems

Certification of Quality Management System ISO 9001:2008

Certification of Environmental Management System ISO 14001:2004

Certification of Occupational Health and Safety Management System BS OHSAS 18001:2007

CAPACITORS FOR AC FILTER & GENERAL PURPOSE

MODULO XD series

Cylindrical Aluminum Case

MODULO XD three-phase Capacitors are a reliable and effective solution for your AC-filtering needs and for high-performance PFC applications. The Aluminum case, IP20 screw-tightened clamp connector and optional IP54 cap ensure maximum flexibility of use and installation even in case of challenging environmental conditions.

The DRY resin filling and the UL-approved overpressure safety mechanism tailored to each size and current level provide highest safety against critical failures in case of overload or at the end of operating life.

The internal construction is based on Δ -connected (Y-connection available on request) windings specially designed to provide high capacity stability of the capacitor's life as well as high RMS current capability over a very wide frequency range.

Main characteristics:

- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminum Case
- DRY Resin filling

Main applications:

- AC Filtering
- High-Performance PFC (high harmonics, voltage and RMS/surge current)
- UPS and Wind-Power Applications

General Characteristics

| | |
|---|---|
| Rated voltage | AC 450 ÷ 800 V (*) |
| Capacitance range | 1 ÷ 250 μ F (*) |
| Capacitance tolerance | - 5% / +10% |
| Test voltage between terminals | 2.15 x Urms - 2s |
| Test voltage between terminals and case | 3.0 kVac 50 Hz - 10s |
| Operating temperatures | -40/85°C |
| Protection degree | IP 20 (IP54 on request) |
| Hot spot temperature | 85 °C |
| Voltage raise (dV/dt) | 110 V/ μ s |
| Dielectric losses (tan δ_o) | 0.2 W/kVAr |
| Typical total losses (tan δ) | 0.55 W/kVAr |
| Maximum cable section | 25 mm ² |
| Three-phase connection | Delta |
| Filling | Dry polyurethane resin |
| Dielectric | Metallized polypropylene film |
| Case | Aluminum |
| Life expectancy | 100.000 h (**) |
| Failure quota | 50/10E9 |
| Installation | Vertical/horizontal |
| Reference standards | IEC 61071-1/2 - IEC 60831 - UL 810 |
| UL-CSA approved |  File n. E102953 |
| M4 screw clamp terminals | Max 1.5 Nm |
| M12 fixing bolt | Max 10 Nm |

(*) Standard values. other values on request.

NOTES:

(Cn) Tolerance standard value: -5% / +10%. Other tolerance values on request. **(Cn) - (Urms)** Capacitance and rated voltage standard values, other values on request. **(Rs)** Releated at 1 KHz. **(R_{THC})** Thermal resistance natural cooling, AMBIENT to CASE. **(I_{rms})** RMS Current @ 45 °C ambient temperature.

On request, external box discharge resistor (not available for series 690 V - 800 V).

Safety system:

Overpressure protection device. To enable the device to operate efficiently, it is necessary to leave a gap of at least 30 mm above the element and use flexible leads for the connection. Dimension with overpressure device activated.

Box TYPE

Standard box dimensions:

E= 195x390x255 mm

F= 185x290x270 mm

G= 225x340x270 mm

H= 330x340x225 mm

I= 330x340x225 mm

Terminal cover I P54 when properly used
(Only for capacitor diameter ≥ 85 mm)

| 100 | 316523340 | 109 | 30 |
| 116 | 316523341 | 125 | 30 |

GP 84 series

General purpose capacitors Cylindrical Aluminum Case

GP84 single-phase, cylindrical AC & DC Capacitors are the ideal solution for most AC Filter requirements as well as special PFC projects.

The sturdy construction with Aluminum case and plastic lid, the wide range of available connections and the safety features based on the integrated UL-approved overpressure disconnecter and DRY resin impregnation ensure GP84 can be easily and reliably integrated into any application and environmental condition.

Main characteristics:

- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminum Case
- DRY Resin filling
- Wide range of connections with high current capability

Main applications:

- AC Filtering
- High-Performance PFC (high harmonics, voltage and RMS/surge current)
- UPS and Wind-Power Applications

General Characteristics

| | |
|--|--|
| RMS Voltage range | 250 ÷ 1000 V |
| Capacitance range | 10 ÷ 600 µF |
| Capacitance tolerance | ±5% / ±10% |
| Max. RMS current | 80 A |
| Series resistance (Rs) | < 8 mΩ |
| Thermal resistance natural cooling (R _{THC}) | < 3.0 °C/W |
| Max. voltage raise of rise (dV/dT) | ≤ 100 V/µs |
| Terminals | M6 or M10 screw-type bolts or double tag 6.3 x 0.8 mm |
| Operating temperature | -40 / +85 °C |
| Storage temperature | -40 / +85 °C |

Dissipation factor change vs Frequency (25°C)

GPX 84 series

High Performance General Purpose Capacitor Cylindrical Aluminum Case

GPX 84 single-phase, cylindrical AC & DC Capacitors are the ideal solution for High Performance applications requiring very high current capability, higher operating temperatures and a lifecycle characterised by very stable capacity values.

In addition to the sturdy construction with Aluminum case and plastic lid, the wide range of available connections and the safety features based on the integrated UL-approved overpressure disconnecter and DRY resin impregnation, GPX 84 includes a fortified internal construction based on busbar connections and a special metallised film design resulting in superior current, temperature and capacity stability parameters.

Main characteristics:

- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminum Case
- DRY Resin filling
- Wide range of connections with high current capability

Main applications:

- AC Filtering
- High-Performance PFC (high harmonics, voltage and RMS/surge current)
- UPS and Wind-Power Applications

General Characteristics

| | |
|---|--|
| Rated AC voltage (U_{RMS}) - effective | 250V - 950V |
| Rated DC voltage (U_N) | 490V - 1850V |
| Maximum effective current (I_{max}) - continuous | 120 Arms |
| Capacitance tolerance | ±10% |
| Series resistance (RS) | 1 - 10 mΩ |
| Terminals | Screw type bolts - M6 / M10 |
| Container | Aluminum |
| Cover | UL 94 V0 plastic cover |
| Film Dielectric type | Self-healing metallized polypropylene film |
| Maximum altitude | 2000 m a.s.l. |
| Mounting | Any position / Indoor |
| Maximum torque for fixing stud | 10 Nm |
| Maximum torque for M6 terminals | 3 Nm |
| Maximum torque for M10 terminals | 6 Nm |
| Working ambient temperature | -40 .. +50 °C |
| Operating temperature MIN/ MAX (case) | -25 .. +70 °C |
| Maximum Hotspot temperature | +85 °C |
| Storage temperature | -40 .. +85 °C |
| Humidity category class (DIN 40040) | F |
| AC test Voltage between terminals and container (to ground) | AC: 3 - 6 KV5 50Hz 10 s |
| Life expectancy (@ U_N / 70°C hot spot) | > 120.000 h |
| Failure quota | 50FIT |
| Reference standards | IEC 1071-1/2 |
| Material and insulation distance designed according to: | UL 810 |

GP 42 series

Compact General Purpose Capacitors Cylindrical Aluminum Case

With its compact size and simple construction, GP42 is an efficient solution for AC Filtering applications requiring relatively low capacities and currents.

Main characteristics:

- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminum Case
- DRY Resin filling

Main applications:

- AC Filtering
- High-Performance PFC (high harmonics, voltage and RMS/surge current)
- UPS and Wind-Power Applications

General Characteristics

| | |
|---|--|
| RMS Voltage range | 250 ÷ 930 V |
| Capacitance range | 0.1 ÷ 100 µF |
| Capacitance tolerance | ±5% / ±10% |
| Max. RMS current | 10 A / 16 A |
| Maximum working frequency | 10 kHz |
| Thermal resistance natural cooling (RTHc) | < 12 °C/W |
| Series resistance (RS) | < 5 mΩ |
| Terminals | Single or double tag 6.3x0.8 mm |
| Working temperature | -40 / +70 °C |
| Storage temperature | -40 / +85 °C |
| Test voltage | U _{tc} = 3 kVac / 6 kVac @50 Hz 10 s U _{tt} = 1.5 x UnDC 10 s |
| Filling | Dry polyurethane resin |
| Dielectric | Metallized PPM film |
| Cylindrical case | Aluminum |
| Life expectancy | 80.000 h (*) |
| Failure quota | 300/10E9 |

(Cn) Standard values, other values on request.

Code "x": according to the mechanical configuration, see figures at page 17 (only for A solution).

| Box TYPE | Standard box dimensions |
|----------|-------------------------|
| 6 | mm 195 x 390 x 250 |
| 7 | mm 195 x 390 x 200 |

| STUD | Capacitor diameter |
|------|--------------------------|
| M8 | Ø 25 - 30 - 40 - 45 - 50 |
| M12 | Ø 55 - 60 |

Example of cover configuration - A solution according as shown in "Table 1", the code "x" in this example cover configuration is equal to "3": 6,3x0,8 single tag terminals

Cover configuration - B solution for this type of solution, is set only x = 4 configuration: 6,3x0,8 double tag terminals

C is equal to 12 mm for diameter up to Ø 60 mm. For higher diameter, C is equal to 16 mm.

A SOLUTION

Overpressure safety device

In order to ensure proper device operation, when the capacitor is installed, a clearance of at least 10mm must be left above terminals.

B SOLUTION

Overpressure safety device

In order to ensure proper device operation, when the capacitor is installed, a clearance of at least 20mm must be left above terminals.

CAPACITORS FOR DC AND PULSE APPLICATION

DCH 85 C series

Very High Density, Low Inductance DC-Link Capacitors Cylindrical Aluminum Case

Thanks to the exclusive Ducati Energia High Crystallinity Film DCH 85 C DC-link Capacitors provide leading Capacity Density without any de-rating or limitation, respective to standard makes.

The very high capacity density allows substantial cost reductions due to the reduction of capacitor size and/or number, as well as particularly low inductance values.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DCH 85 C operational life, while maximizing the current capability.

Main characteristics:

- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminum Case
- DRY Resin filling

Main applications:

- DC-Link
- Energy Storage / Pulse Generation

General Characteristics

| | |
|--|---|
| DC Voltage range | 700÷2100 V |
| Maximum ripple voltage | 1150 V |
| Maximum ripple current | 100 A |
| Capacitance range | Up to 5600 µF |
| Capacitance tolerance | standard: ±10% on request ±5% |
| Series resistance (RS) | < 4.5 mΩ |
| Maximum Voltage rate of rise (dV/dT) | ≤ 40 V/µs |
| Terminals | M6 internal threads M8 screw types bolts |
| Voltage test | $U_{tc} = 3.5 \text{ kVac @50 Hz 10 s}$ $U_{tt} = 1.5 \times U_{nDC} 10 \text{ s}$ |
| Working temperature ($\theta_{MIN} - \theta_{MAX}$) | -25 / +85 °C |
| Storage temperature | -25 / +85 °C |
| Filling | Dry polyurethane resin |
| New PP Dielectric | Self healing. PPMdh film |
| Cylindrical case | Aluminum |
| Failure quota | 50/10 E9 |
| Life expectancy | 100.000 h(*) |
| Maximum altitude | 2000 m a.s.l. |
| Reference standard | IEC 1071-1/2 - IEC 1881 - UL 810 |
| Internal thread terminals | Max 3 Nm |
| M8 screw terminals | Max 6 Nm |
| M12 fixing bolt | Max 12 Nm |
| UL - CSA approved () | File n. E192559 |
| In according to fire protection standard  | EN 45545-2 (only for 85 and 100mm diameters) |

(*) For details please refer to page 75.

Safety system: These capacitors are designed with a particular type of polypropylene metallized film (PPMd film) that assures an open circuit at the end of life, if the operation is within the specification.

NOTES:

(Cn) Tolerance standard value: ±10%. Other tolerance values on request.

(Cn) - (Un) Capacitance and rated voltage standard values, other values on request.

(Ur) Maximum peak to peak alternating voltage component on the DC working voltage.

(Rs) Releated at 1 kHz.

(R_{THC}) Thermal ristance CASE TO AMBIENT in natural cooling environment.

(Imax) Maximum RMS current, referred to an ambient temperature of 50 °C (natural cooling) and working frequency of 1 KHz.

(x code) According to the terminal type: x=0--> A SOLUTION (internal thread M6) / x=1 B SOLUTION (M8 screw type bolts).

Mechanical Standard configuration:

Terminal variations on request:

Two different terminals height for special BUS BAR coupling.

For Capacitor diameter $\varnothing 116$ and $\varnothing 136$ mm are available these different terminals type:

- $\varnothing e$: 12 - 14 - 16 mm
- Mx : M6 - M8

| Diameter \varnothing (mm) | A spacing (mm) | Type of terminals | Insulating spacing | |
|--------------------------------|-------------------|--------------------------|--------------------|----------|
| | | | Surface (mm) | Air (mm) |
| 75, 85, 100 | 32 | M6 female / M8 male | 36 | 20 |
| 90 | 45 (*) | M6 female / M8 male | 49 | 33 |
| 116, 136 | 50 (**) | M6 - M8 female / M8 male | 54 | 38 |

(*) Available also in the dimensions: 32 - 50 mm

(**) Available also in the dimensions: 32 - 45 mm

RMS working current vs Ambient temperature

FIT vs Hot Spot Temperature

DCH 85C Un=900V

Typical DCH85C Series Resistance at ambient temperature for a specific model. For the characterization of a different model, please contact R&D department.

DC 85 C series

High Density, Low Inductance DC-Link Capacitors Cylindrical Aluminium Case

Powered by the tried and proven Ducati Energia PPMh technology DC 85 C is a competitive and reliable solution to all common DC-Link applications. When coupled with the exclusive Ducati Energia High Crystallinity Film the DC 85 C construction provides superior temperature performance with 100khrs life @ 90°C HotSpot or extended life of 400khrs @70°C HotSpot.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 85 C operational life, while maximizing the current capability.

Main characteristics:

- High Capacity Density
- Self-Healing Metallized Polypropylene Film
- UL-Approved Overpressure Safety Device
- Aluminium Case
- DRY Resin filling
- Low ESL

Main applications:

- DC-Link
- Energy Storage / Pulse Generation

DC 85 C Versions with Ducati Energia High Crystallinity Film:

- Standard Life expectancy 100.000hrs at 90°C HotSpot
- Extended Life expectancy 400.000hrs at 70°C HotSpot

General Characteristics

| | |
|--|---|
| DC Voltage range | 550÷1800 V |
| Maximum ripple voltage | 1150 V |
| Maximum ripple current | 100 A |
| Capacitance range | Up to 4450 µF |
| Capacitance tolerance | standard: +0%/-15%; others on request |
| Series resistance (RS) | < 4.5 mΩ |
| Maximum Voltage rate of rise (dV/dT) | ≤ 40 V/µs |
| Terminals | M6 internal threads M8 screw types bolts |
| Voltage test | $U_{tc} = 3.5 \text{ kVac @} 50 \text{ Hz } 10 \text{ s}$ $U_{tt} = 1.5 \times U_{nDC} 10 \text{ s}$ |
| Working temperature ($\theta_{MIN} - \theta_{MAX}$) | -25 / +85 °C |
| Storage temperature | -25 / +85 °C |
| Filling | Dry polyurethane resin |
| Dielectric | Self healing PPMd film |
| Cylindrical case | Aluminum |
| Failure quota | 50 /10E9 |
| Life expectancy | 100.000 h(*) |
| Maximum altitude | 2000 m a.s.l. |
| Reference standard | IEC 1071-1/2 - IEC 1881 - UL 810 |
| Internal thread terminals | Max 5 Nm |
| M8 screw terminals | Max 6 Nm |
| M12 fixing bolt | Max 12 Nm |
| UL - CSA approved () | File n. E192559 |
| In according to fire protection standard  | EN 45545-2 (only for 85 and 100mm diameters) |

Safety system: These capacitors are designed with a particular type of polypropylene metallized film (PPMd film) that assures an open circuit at the end of life, if the operation is within the specification.

(*) For details please refer to page 75.

DC 89 HC series

High Current, Very Low Inductance DC-link / Snubber Capacitors
Cylindrical Plastic Case, optimised for heatsink mounting

The special design of DC 89 HC provides very high RMS current capability and very low series inductance in a compact package. The exclusive metal bottom reduces thermal resistance for optimal heat-sink mounting. The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 89 HC operational life, while maximizing the current capability. A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL.

Main characteristics:

- Very High Capacity Density
- Self-Healing Metallized Polypropylene Film
- UL-Approved Construction
- V0 Plastic Case
- DRY Resin filling
- REAL Very Low ESL

Main applications:

- High Switching Frequency DC-Link

DCH 86 PS series

Very High Density, Very Low Inductance DC-Link Capacitors - Prismatic Plastic Case

Thanks to the exclusive Ducati Energia High Crystallinity Film DCH 86 PS Prismatic DC-link Capacitors provide leading Capacity Density without any de-rating or limitation, respective to standard makes.

The very high capacity density allows substantial cost reductions due to the reduction of capacitor size and/or number, as well as particularly low inductance values.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DCH 86 PS operational life, while maximizing the current capability.

A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL.

Main characteristics:

- Very High Capacity Density
- Self-Healing Metallized Polypropylene Film
- UL-Approved Construction
- Aluminum Case
- DRY Resin filling
- REAL Low ESL

Main applications:

- DC-Link
- Energy Storage / Pulse Generation

General Characteristics

DC 86 PS series

High Density, Very Low Inductance DC-Link Capacitors Prismatic Plastic Case

This Prismatic Box variant is powered by the tried and proven Ducati Energia PPMh technology making it a competitive and reliable solution to all common DC-Link applications.

When coupled with the exclusive Ducati Energia High Crystallinity Film the DC 85 B construction provides superior temperature performance with 100khrs life @ 90°C HotSpot or extended life of 400khrs @70°C HotSpot.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 86 PS operational life, while maximizing the current capability.

A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL

Main characteristics:

- High Capacity Density
- Self-Healing Metallized Polypropylene Film
- UL-Approved Construction
- V0 Plastic Case
- DRY Resin filling
- REAL Low ESL

Main applications:

- DC-Link
- Energy Storage / Pulse Generation

DC 86 PS Versions with Ducati Energia High Crystallinity Film:

- Standard Life expectancy 100.000hrs at 90°C HotSpot
- Extended Life expectancy 400.000hrs at 70°C HotSpot

DC 86 P series

High Density, Low Inductance DC-Link Capacitors Prismatic Plastic Case

This very large Prismatic Box variant is particularly convenient for applications requiring very large capacity or high operating voltages; the tried and proven Ducati Energia PPMh technology provides competitive and reliable performances for all common DC-Link applications.

When coupled with the exclusive Ducati Energia High Crystallinity Film the DC 86 P construction provides superior temperature performance with 100khrs life @ 90°C HotSpot or extended life of 400khrs @70°C HotSpot.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 86 P operational life, while maximizing the current capability.

Main characteristics:

- Very High Capacity Density
- Self-Healing Metallized Polypropylene Film
- V0 Plastic Case
- DRY Resin filling
- Low ESL

Main applications:

- DC-Link
- Energy Storage / Pulse Generation

DC 86 B Versions with Ducati Energia High Crystallinity Film:

- Standard Life expectancy 100.000hrs at 90°C HotSpot
- Extended Life expectancy 400.000hrs at 70°C HotSpot

General Characteristics

| | |

DC 88 M series

High Density, Very Low Inductance DC-Link Capacitors - Prismatic Stainless Steel Case (non magnetic)

The metallic case and open resin casting allows high flexibility of construction: painted / stainless steel or aluminum cases with standard screw terminals or IGBT-specific busbar terminals. DC 88 M is powered by the tried and proven Ducati Energia PPMh technology making it a competitive and reliable solution to all common DC-Link applications.

When coupled with the exclusive Ducati Energia High Crystallinity Film the DC 88 M construction provides superior temperature performance with 100khrs life @ 90°C HotSpot or extended life of 400khrs @70°C HotSpot.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 88 M operational life, while maximizing the current capability.

A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL.

Main characteristics:

- High Capacity Density
- Self-Healing Metallized Polypropylene Film
- Steel, Stainless Steel or Aluminium Case
- DRY Resin filling
- REAL Low ESL

Main applications:

- DC-Link for Large Drives
- Energy Storage / Pulse Generation

DC 88 m Versions with Ducati Energia High Crystallinity Film:

- Standard Life expectancy 100.000hrs at 90°C HotSpot
- Extended Life expectancy 400.000hrs at 70°C HotSpot

General Characteristics

| | |
|---|--|
| DC Voltage range | 550÷1550 V(*) |
| Maximum ripple current | 300 A |
| Capacitance range | Up to 10500 µF |
| Capacitance tolerance | standard: ±10% / on request: ±5% |
| Equivalent series inductance (LESR) | 35 nH to 50 nH |
| Terminals | 4x M10 screw type lts |
| Test voltage | $U_{tc} = 4.5 \text{ kVac @50 Hz 60 s}$ $U_{tt} = 1.5 \times U_{DC} 10 \text{ s}$ |
| Working temperature ($\theta_{MIN} - \theta_{MAX}$) | -25 / +85 °C |
| Storage temperature | -25 / +85 °C |
| Filling | Polyurethane resin |
| Dielectric | Self healing PPMd film |
| Container | Non painted, stainless steel, not magnetic casing |
| Failure quota | 50 /10E9 |
| Life expectancy | 100.000 h (**) |
| Maximum altitude | 2000 m a.s.l. |
| Reference standard | IEC 1071-1/2 - IEC 1881 |
| M10 internal thread | Max 6 Nm |
| Fixing slots | Max 15 Nm |

Safety system: These capacitors are designed with a particular type of polypropylene metalized film (PPMd film) that assures an open circuit at the end of life, if the operation is within the specification.

DC 45 series

High Density, Low Inductance, Vacuum Silicone Oil impregnated DC-Link Capacitors - Prismatic Metal Case (steel, stainless steel or aluminum)

Designed for High-Voltage - High-Capacity applications, DC 45 can be made either with steel, stainless steel or aluminum cases and are vacuum impregnated with silicon oil.

The exclusive Ducati Energia metallization profiles guarantee high capacity stability and a controlled, open-circuit condition at the end of DC 45 operational life, while maximizing the current capability.

A special internal construction allows the minimization of field effects, thus guaranteeing real-life low ESL.

Main characteristics:

- High Capacity Density
- Self-Healing Metallized Polypropylene Film
- Steel, Stainless Steel or Aluminium Case
- Vacuum Silicone Oil Impregnation
- REAL Low ESL

Main applications:

- DC-Link for Large Drives (Marine/Railway Propulsion; Mining Equipment, etc)
- Energy Storage / Pulse Generation

Mechanical Design

No magnetic metal case: Stainless steel case, no magnetic / Aluminum case / Steel case

These are some examples of standard mechanical solutions.
According to customer specification, other mechanical design and dimensions, terminals position and quantity are available on request.

NOTES:
In case of two or more units connected as a battery, please take also into consideration the maximum deformation of W (width of the case):
at the end of life, this dimension may be grow up to 15% greater.

Mounting brackets (suggested)

For H < 500 mm, use only one mounting bracket for each side.
Take also into consideration the type of fixing frame (vertical / horizontal, resting or cantilevered): it may be necessary to use two mounting brackets on each side.
In case of doubts, please contact DUCATI technical department to choose the right solution.

MB1 solution
Suggested for cabinet with dimension W : 125 and 140 mm
Code: 315104102

MB2 solution
Suggested for cabinet with dimension W : 140 and 165 mm
Code: 315104138

Terminals and Connections

Screw type solution
Material: tinned copper

TYPE TC1

- Bushing:
- Ceramic - brown colour
Connector
- type: M12 / M16
- length: LT on request

TYPE TC2

- Bushing:
- Ceramic - brown colour
Connector
- type: M12 / M16
- length: LT on request
Creepage distance: 85mm
Air distance: 50mm

TYPE TCP1

- Bushing:
- Plastic - grey / black colour
- Height: 20mm
Connector
- type: M12 / M16
- length: LT on request
Creepage distance: 42mm
Air distance: 30mm

TYPE TCP2

- Bushing:
- Plastic - grey / black colour
- Height: 30mm
Connector
- type: M12 / M16
- length: LT on request
Creepage distance: 64mm
Air distance: 40mm

TYPE TCP3

- Bushing:
- Plastic - grey / black colour
- Height: 40mm
Connector
- type: M12 / M16
- length: LT on request
Creepage distance: 85mm
Air distance: 50mm

TYPE TCP4

- Bushing:
- Plastic grey / black colour
- Height: 20mm (available also 30 / 40 mm)
Connector
- type: female M8 (available also M12 / M16)
Creepage distance: 42mm
Air distance: 30mm

Terminals and Connections

Female internal thread
Material: tinned copper

Pressure Switch

Adjustable pressure switch with SPD contacts - Normally closed
IP54 cover - Switch rating: 6A / 250Vac
Available on two different solution, according to the maximum dimension accepted:

Standard solution:

On request, solution with reduced dimension:

IP 54 Cover

APPENDIX

TECHNOLOGIES

PPM / MKP technology Metallized polypropylene technology (PPM – MKP) utilizes a vacuum evaporation technique to deposit an extremely thin layer of metal on one side of the polypropylene film.

The capacitor elements built using this technology are obtained by winding two polypropylene films. The capacitor plates consist in the metallized surface of the two films and the dielectric is the propylene film itself. The main advantage of capacitors with metallized plates is their self-healing capacity. This means that they are capable of restoring their electrical properties following the occurrence of a short circuit between the plates. Due to the reduced thickness of the plates, the short circuit current generated in the area of a fault is capable of vaporizing the metal coating; the short circuit is thereby automatically extinguished without an appreciable reduction in capacitance or expenditure of energy.

PPMh and PPMd technology The continuous research conducted in Ducati Energia laboratories has led to the development of a polypropylene film with a special metallization, whose purpose is to increase gradient of voltage without decreasing lifetime. Thanks to this innovative metallization treatment, the capacitor has a significantly dimension reduction and maintains its dielectric properties and performance in terms of both current and voltage:

- PPMh is film designed for AC voltage, can support also DC applications, agree with technical data;
- PPMd is designed for DC voltage, with high superimposed ripple.

PPMdH high density / high temperature technology The latest development of Ducati Energia research is a particularly crystalline film with a special metallization type. The result is a superior capability in terms of voltage gradient and temperature stability. PPMdH therefore provides:

- Up to +25% capacity in the same volume
- Up to +20°C Operating Temperatures, without current or lifetime derating

TERMS AND DEFINITION

(According to IEC 61071)

Rated capacitance (Cn)

Capacitance value rated at ambient temperature (20 ±5°C) and at the rated voltage. For capacitors made with metallized polypropylene dielectric film, the capacitance and dissipation factor change versus temperature. Typical graphs of these deviations are shown in the below diagrams.

Capacitance change with temperature (general guide)

Dielectric Dissipation factor change with temperature f=1KHz - (general guide)

Tolerance on capacitance

The maximum admitted deviation from the rated value of capacitance, measured at ambient temperature (20 ±5°C) and at the rated voltage.

Rated AC Voltage (Un AC)

The maximum operating peak recurrent voltage of either polarity of a reversing type wave form, for which the capacitor has been designed.

Rated DC Voltage (Un DC)

The maximum operating peak voltage of either polarity but of a non-reversing type wave form, for which the capacitor has been designed.

Rated Rms voltage (Urms)

Root mean square of the maximum permissible value of A.C. voltage, in continuous operation. In case of sinusoidal wave form voltage, the following relationship could be considered:

$$U_N = U_{RMS} \cdot \sqrt{2}$$

Non-recurrent surge voltage (Us)

A peak voltage inducted by switching or any other faults or disturbance of the system, which is allowed for a maximum of 500 times and for a durations shorter than 100 msec.

Ripple voltage (Ur)

The peak-to-peak alternating component of the unidirectional voltage.

Illustrative Voltage Curve for terms and definitions of AC application

Illustrative Voltage Curve for terms and definitions of DC application

Maximum current (I_{max})

The maximum rms value of permissible current in continuous operation. This value is related to the maximum power dissipation at the highest permitted temperature of the case (\varnothing_{max}) at which the capacitor may be operated. Operating at the maximum r.m.s current (I_{MAX}), the capacitor produces a case temperature rise of about 10 – 15 °C over the ambient, according to the capacitor type (please see RTHC for each models) and the application. To avoid thermal instability on the capacitor the case temperature of the capacitor must not exceed the maximum operating temperature (\varnothing_{max}), so it could be necessary to reduce the ambient temperature with a cooling air system or to reduce the I_{max} current.

Maximum peak current (I_{pk})

The maximum current amplitude which occurs instantaneously during continuous operation. For some capacitors series and according to the typical application (high or low distortion), it's possible to describe two different maximum peak current:

I_{pk} C_w (continuous waveform): for linear or low distortion current waveform - picture 1

I_{pk} I_w (Impulsive waveform):

for high distortion current waveform, typical when the $t_0/T < 0,1\%$ - picture 2

Rate of voltage rise (du/dt)

Maximum permitted repetitive rate of voltage rise of the operational voltage

Peak surge current (I_s)

The admissible peak current inducted by switching or any other faults or disturbance of the system, which is allowed for a maximum of 500 times and for a durations shorter than 100 msec.

Equivalent series resistance (RESR)

An effective resistance which, if connected in series with an ideal capacitor with the same value capacitance, would have a power loss equal to the active power dissipated in the capacitor under specified operating conditions. Normally, for frequency lower than the resonating one, the following relationship could be considered:

$$R_{ESR} = R_s + (\tan\delta_0 / 2\pi f C)$$

Series resistance (R_s)

It is the resistance produced by the current heat losses $I_{RMS}^2 \cdot R_s$ in the capacitor.

Equivalent series inductance (L_{ESR})

The value of equivalent inductance that the capacitors has due to the internal connections, terminals, winding characteristics and physical dimensions.

Thermal resistance (R_{THC})

It is the thermal resistance (°C/W) between the hottest point on the case of the capacitor in thermal equilibrium and the natural cooling environment, with the temperature measured approximately at 0,1 meter away from the capacitor container and at two-third of the height from its base. The following relationship could be considered:

$$P_{MAX} = 1/R_{THC} (\varnothing_c - \varnothing_{MAX})$$

Maximum dissipation factor (tanδ max)

Maximum tangent of the loss angle, expressed as the ratio between the equivalent series resistance and the capacitive reactance of the capacitor at 50Hz sinusoidal frequency. The nominal value (tan) is calculated as follows:

$$\tan\delta = 2\pi f C R_{ESR} = \tan\delta_0 + 2\pi f C R_s$$

Safety area

The following charts shown the maximum permissible voltage or current in case of an overload operation. The amplitude of overvoltages or overcurrents may be tolerated without significant reduction in the life time of capacitor, if the case temperature of the capacitor is within the operating temperature.

Safety area for overload Voltage

Safety area for overload Current

Voltage test between terminals (Utt)

Routine test of all capacitors conducted at room temperature, prior to delivery. The capacitor shall be subjected for 10 s to a test voltage applied between the terminals. During the test, neither puncture nor flashover shall occur, self-healing breakdowns are permitted. For more details regarding the value of test voltage, please see the data sheet for each single capacitor model.

Voltage test between terminals and case (Utc)

Routine test of all capacitors conducted at room temperature, prior to delivery. The capacitor having all terminals insulated from the container shall be subjected for 10 s to a AC test voltage applied between terminals (joined together) and the container. During the test, neither puncture nor flashover shall occur. For more details regarding the value of test voltage, please see the data sheet for each single capacitor model.

Lowest operating temperature (Ø min)

Lowest permissible case temperature, in thermal equilibrium, at which the capacitor may be used.

Maximum operating temperature (Ø max)

Highest permissible case temperature, in thermal equilibrium, at which the capacitor may be used.

Climatic categories

F class:
 - maximum relative humidity 75% - annual means,- permitted maximum 95% for 30 days/year,- condensation not permitted.

Cooling-air temperature (Øamb)

Temperature of the cooling air measured at the hottest position of the capacitor, under steady state conditions, midway between two units. If there is only one unit involved, it is the temperature measured at a point approximately 0,1 m away from the capacitor container and two-thirds of the height from its base.

Hotspot temperature (HS)

The highest temperature present inside the capacitor dielectric . Since RTH the thermal resistance between internal dielectric hotspot and the hottest position of the capacitor case, the HS value (°C) can be calculated with the following formula:

$$HS = \varnothing_{amb} + P_{MAX} R_{TH}$$

SAFETY

Capacitor Protection:

- Against accidental contact

In accordance with IEC 61071, all capacitors are checked by 100% routine test (voltage test between terminations and case). Accessible capacitors must be earthed at the bottom stud or with an additional earthing clamp.

- Overload and failure at the end of service life

All described capacitors are "self-healing": in the event of a voltage breakdown the metal layers around the breakdown channel are evaporated by the temperature of the electric arc between the electrodes, and create small overpressure. An insulation area is formed which is reliably resistive and voltage proof for all operating requirements of the capacitor. The capacitor remains fully functional during and after the breakdown. In the event of overvoltage or at the end capacitor service life, an increasing number of selfhealing breakdowns may cause rising pressure inside the capacitor and brake the can. To prevent it, the capacitor is fitted with an obligatory "overpressure mechanism". This safety mechanism is based on an attenuated spot at one of the connecting wires inside the capacitor. When the rising pressure, the casing begins to expand, and disconnects the attenuated spot wire and the current path is interrupted irreversibly. It has to be noted that this safety system can act properly only within the permitted limits of loads and overloads. The capacitors in rectangular case are provided with an overpressure switch that would signalize a rising pressure inside the case. A corresponding external safety circuit which disconnects the capacitor immediately in such event has to be provided by the user.

- Overvoltages and Short Circuits

As shown above, the capacitors are self-healing and regenerate themselves after breakdowns of the dielectric. For voltages within the permitted testing and operating maximum the capacitors are overvoltage-proof. They are also proof against external short circuits as far as the resulting surge discharges do not exceed the specified current limits (IS).

Operating life

The capacitors have been designed for an average service life of 100,000 hrs (with 50 fit permitted). Above all, the operating life of the capacitors depends on the temperature inside during operation, and the field strength in its dielectric. The following diagram demonstrates the correlation between service life, hot spot temperature, and operating voltage.

Life vs Operating Voltage and Hot Spot Temperature (general guide)

FIT vs Hot Spot Temperature (general guide)**GENERAL SAFETY INSTRUCTIONS****Connection**

Connection at threaded studs have to be made between two nuts. It is not recommended to solder cables to the terminals. Permitted torque for screw connections. See individual data sheets for each range.

Capacitors overpressure device:

All the AC capacitors with overpressure device shall be connected with sufficiently flexible leads to permit the functioning of the mechanism, and sufficient space for expansion of the capacitor case must be left above the terminals. Depending on the specific dimensions of the capacitors the case could expand between 15 mm and 30 mm.

Mounting Location

As mentioned, the useful life of a capacitor may be reduced dramatically if exposed to excessive heat. To avoid overheating the capacitors must be allowed to emit their heat losses unhindered and shall be shielded from external heat sources. If attenuating circumstances give cause for doubt, special tests should be conducted to ensure that the permitted maximum temperature of the capacitor is not exceeded even under the most critical ambient circumstances. It should be noted that the internal heat balance of large capacitors is only reached after a couple of hours.

Mounting position

Capacitors with liquid or viscous filling shall be installed upright with terminals facing upwards. Please consult our technical department if different mounting position is required. Capacitors with hard resin filling can be mounted in any position without restrictions.

Earthing

Capacitors with a metal case must be earthed at the mounting stud or by means of a separate metal strap or clamp.

Discharge

If there is no discharge of the capacitors provided by external circuits, the capacitors should be provided with discharge resistors. In any event, the poles of the capacitors must be short-circuited before being touched. Note that capacitors with nominal voltages above 750 V in particular may regenerate new voltage at their terminals after having been short-circuited just for short periods. This condition results from the internal series connection of the capacitor elements and will be avoided by storing them permanently short-circuited.

DISPOSAL

Our capacitors do not contain PCB, solvents, or any other toxic or banned materials. The impregnants and filling materials contain vegetable oil or

polyurethane mixtures. The capacitors are not rated as hazardous goods in transit and do not have to be marked under the Regulations for Hazardous Goods. They are rated WGK 0 (water risk category 0 "no general threat to water"). We recommend disposing of the capacitors through professional recycling centres for electric/electronic waste. The capacitors can be disposed of as follows:

- Capacitors: acc. to European Waste Catalogue(EWC) No. 160216 ("Components taken from discarded equipment")
- Liquid filling materials: acc. to EWC No. 080402 ("Waste adhesives and sealants free of halogenated solvents")
- Hardened filling materials: acc. to EWC No. 080404 ("Hardened adhesives and sealants").

Caution: When touching or wasting capacitors with activated break-action mechanism, please consider that even after days and weeks these capacitors may still be charged with high voltages! Capacitors are hermetic sealed, to maintain a long operating life and for the correct functioning of the break action mechanism, please pay special attention not to damage any parts of the can, cover or isolators.

NOTE:

Capacitors of the DC series are not provided with an internal safety mechanism which would separate them in a controlled and reliable manner from the energy supply in case of malfunctioning. These capacitors consist mainly of polypropylene (up to 90%), i.e. their energy content is comparably high. Capacitors may rupture and ignite as a result of internal faults or external overload (e.g. temperature, overvoltage, harmonic distortion). It must therefore be ensured by proper measures that they not perform any hazard for their environment in the event of failure. Energy content in case of fire: approx. 40 MJ/kg.

MOUNTING AND OPERATING INSTRUCTIONS**I.SCOPE**

These safety recommendations and requirements apply to the following power electronics capacitors and standards. Their purpose is to describe the state of technology which must as a rule be adhered to in all relevant contracts for goods and services.

- 1) Capacitors for power IEC / DIN EN 61071 electronics (PEC).
- 2) Capacitors for railway IEC / DIN EN 61881 applications (PEC).

II.GENERAL SAFETY RULES

Since power capacitors are electrical energy storage devices, they must always be handled with caution. Even after being turned off for a relatively long period of time, they can still be charged with potentially lethal high voltages.

III.GENERAL CONDITIONS FOR STORAGE AND USE

- 1) The manufacturer's installation, application and maintenance instructions and the relevant standards must always be complied with.
- 2) Capacitors must never be stored or used outside the specified temperature ranges.
- 3) Capacitors may not be stored or operated in corrosive atmospheres, particularly not when chlorides, sulfides, acids, alkalis, salts, organic solvents or similar substances are present.
- 4) The maximum temperatures (including inherent heat) voltages, currents, power, reactive power, thermal resistances, frequencies, discharge times and switching frequencies specified in the data sheet must be adhered to.
- 5) A means of sufficient dissipation of heat loss (fan, cooling) or escaping gases in case of malfunction must be provided. Required minimum distances (e.g. to sources of heat) must be maintained.
- 6) Specified torques for electrical connections and fasteners must be adhered to.
- 7) Mechanically or electrically damaged, leaky or otherwise damaged capacitors may not be used or continue to be used.
- 8) Existing protective devices of the capacitors may not be manipulated, removed or impaired in their function.

IV. INTERNAL PROTECTIVE DEVICES

- 1) Internal protective devices offer basic protection against certain internal faults, aging and overload.
- 2) Internal protective devices alone are not sufficient to prevent all conceivable dangers in case of malfunction. The so-called self-healing capability is not the same as failsafe system stability.
- 3) Depending on their protective mechanism, internal protective devices are subject to technical and functional limits which when exceeded will definitely cause malfunctions. Such violations can be excess temperature, overvoltage, wrong application, wrong installation, faulty maintenance, mechanical damage, or operation outside the technical limits of the specification.
- 4) Most internal protective devices can interrupt the voltage only within the capacitor. They are not fuses in the classical sense such as cable or device fuses which interrupt the voltage upstream from the faulty system component.

V. RISK FACTORS FOR THE CAPACITOR

The most frequent risk factors which cause capacitor damage and possibly also the failure of the internal protective devices are:

- 1) Exceeding the permissible temperature on the capacitor surface (a continuous increase temperature of 7 K cuts life expectancy in half).
- 2) Over voltages, over currents and high inrush currents even if they only occur briefly or cyclically (a continuous increase in the operating voltage of the capacitor of 8% cuts life expectancy in half).
- 3) Network harmonics, resonances created by harmonics or flicker even when they occur only briefly or cyclically.
- 4) Aging of the lighting equipment and consequential excess temperature or high UV stress.
- 5) Failure of other components in a common circuit and consequential over voltages or over currents.
- 6) Interaction with other reactive power components, and also parasitic capacitances (cable) or inductivities in common circuits.
- 7) Even if the test based on the capacitor standard is passed, this does not ensure comprehensive protection against all possible overloading.
- 8) During the operation of thyristor-switched capacitor system, high DC voltages can occur continuously on the capacitors of compensation systems which are not switched on. These DC voltages must be considered when designing the capacitors and the discharge devices.

VI. RISKS WHEN A FAULT OCCURS

- 1) Power capacitors can be a significant risk in the case of failure due to their stored energy and/or their properties during operation in networks with high short-circuit power.
- 2) Power capacitors can actively fail when internal or external protective devices are missing, incorrectly dimensioned or have failed. They can burst, burn or, in extreme cases, explode.

VII. RISK MINIMIZATION

- 1) The capacitor manufacturer cannot predict all possible stresses which a power capacitor can be subjected to and which must be taken into account in the design. This means that the user bears crucial co-responsibility here. For this reason alone, safety and quality should be the top priorities when a capacitor is selected. This is why we urgently recommend the use of capacitors with appropriate internal protective devices.
- 2) Before designing the application, capacitors must be checked for their suitability for this particular application. All influences (parameters) must be considered. Unexamined use in an application may have serious consequences. Particularly with sensitive applications, the internal protective devices of the capacitors should be supplemented by the user with suitable external protective measures. External protective measures are even mandatory when capacitors are used without internal protective devices.
- 3) When power capacitors are used, suitable measures must always be taken to eliminate possible danger to humans, animals and property both during operations and when a failure occurs. This applies to capacitors both without and with protective devices.
