Characteristics

The Series 95 PCB pushbuttons can be used in combination with 1.5 to 2.5 mm PCBs. The buttons are self-attaching until they are soldered. Depending on the design, they can be equipped with 2 or 3 SMD LEDs. The series is available in the following sizes:

- 19.05 × 19.05 mm
- 15.88 × 15.88 mm
- 12.7 × 12.7 mm

Functions

The Series 95 incorporates the following functions:

- Pushbutton
- Illuminated pushbutton

Market segments

The EAO Series 95 is especially suited for applications in the segment:

Audio and video

Please refer to the EAO website to obtain detailed information regarding this series **www.products.eao.com** Configure a product to your exact needs and request a quotation.

95 PCB pushbuttons

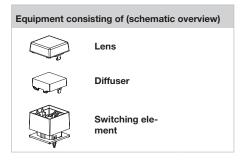

Illuminated pushbutton, IP 40

Product can differ from the current configuration.

24 max. 17.2 5 5.7 1 ... 2.5

Dimensions [mm]

Each Part Number listed below includes all the black components shown in the 3D-drawing.

Additional Information

- Lens plastic, colourless, transparent
- Suitable for PCB thickness 1.5 to 2.5 mm
- Special spring clip contacts position and hold the pushbutton in place during the soldering process. The soldering provides the contacting and the mechanical strength. The pushbutton is designed for panel mounting only.

Drawings

95 Technical data

Pushbutton and Illuminated pushbutton

Switching system

Gold plated momentary contact, 1 normally open, self-cleaning

Material

Plastic parts

PC, as per UL 94 HB, Cd-free

Material of contacts

CuSn, contact gold-plated, soldering terminal tinned

Mechanical characteristics

Actuating travel

4.5 mm

Actuating force

3N to end position

Switching point

2.3 mm ±0.8 mm at operation

Resistance to heat of soldering

260 °C, 5s, per IEC60068-2-20

Life time

> 5 million operations, as per IEC 60512-5-9a

Electrical characteristics

Illumination

recommended SMD-LED types:

P-LCC package or similar, radiation angle approx. 120°; use of smaller SMD-LED is possible.

SMD-LED configurations size:

max. 2 SMD-LEDs for switch size 12.7 mm

max. 3 SMD-LEDs for switch size 15.88 mm and 19.05 mm, single colour or multi-colour.

Height of SMD-LED:

max. 2.1 mm

Electric strength

 \leq 50 m Ω , as per IEC 60512-2-2b at new state

Isolation resistance

 $> 1 T\Omega$, as per IEC 60512-2-3a between contacts

Switch rating

min. 1 mVDC, 100 μA max. 48 VDC, 50 mA

Electric strength

2.5 kVAC, as per IEC 60512-2-11

Environmental conditions

Front protection

IP 40 before front plate for complete switch

Operating temperature

-25°C...+70°C

Storage temperature

-40°C...+80°C

Vibration resistance

10g, at 10-2000 Hz, 0.75 mm, as per IEC 60512-4-4

Shock resistance

Pushbutton and Illuminated pushbutton 50 g, 11 ms, as per IEC 60512-4-3

Approvals

Declaration of conformity

Suppressor circuits

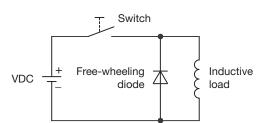

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e. g. 12VDC) see Fig. 2.

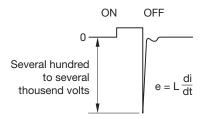

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load Fig. 1

Counter EMF over load without free-wheeling diode Fig. 2
