1 Open Circuit Inductance (OCL) Test Parameters: 100kHz, 1.0V_{rms}, 0.0Adc

2 I_{rms}: DC current for an approximate temperature rise of 40°C without core loss. Derating is necessary for AC currents. PCB pad layout, trace thickness and width, air-flow and proximity of other heat generating components will affect the temperature rise. It is recommended the part temperature not exceed 125°C under worst case operating conditions verified in the end application.

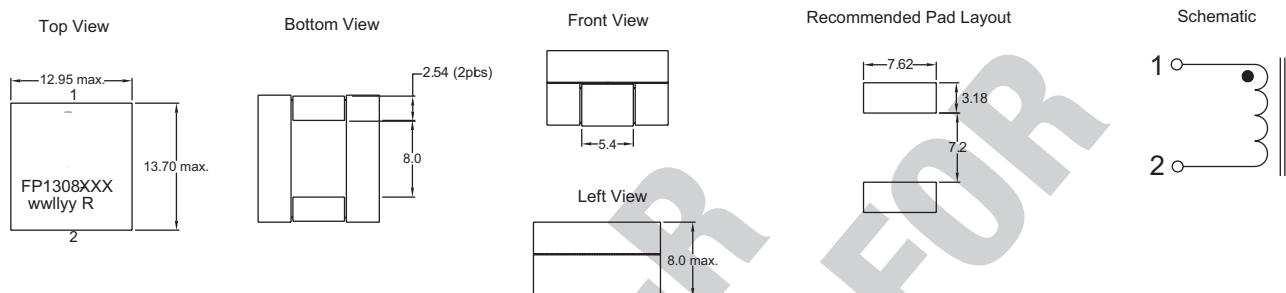

3 I_{sat}: Peak current for approximately 20% rolloff at +25°C.

4 K-factor: Used to determine B_{p-p} for core loss (see graph). B_{p-p} = K * L * ΔI. B_{p-p} (mT): (Gauss), K: (K-factor from table), L: (inductance in μ H), ΔI (peak-to-peak ripple current in amps).

5 Part Number Definition: FP1308-xxx-R

- FP1308 = Product code and size
