

# Motor starter combinations

Depending on the combination of motor-protective circuit-breaker and contactor a motor starter can be coordination type "1" or type "2". With both types the possible short-circuit is safely interrupted. The maximum operational continuity is obtained by starters with type "2" coordination as they can be directly re-switched on after the cause of the short-circuit has been removed.

### Motor starter combinations

Motor starters up to 1000 A  
Tested coordination type "1" and "2" starters offer the highest safety  
Page 9/8

### xStart Motorstarters

Complete DOL or reversing starters up to 32 A  
- Pre-mounted starters minimise the wiring time.  
- "Plug & Play" with starters on busbar adapters  
- Suitable design for high value systems  
Page 9/2

### easyConnect SmartWire

Plug-in control wiring system  
- SmartWire replaces the control wiring and the I/O level in the PLC  
- The use of standard devices from the xStart range guarantees a high flexibility and reduces stock costs  
- The use of wiring links eliminates wiring errors  
Page 9/28

### \* Conditions for fulfilling type "1" coordination (IEC/EN 60947-4-1)

- The stated short-circuit current  $I_q$  must be safely interrupted.
- In the event of a short-circuit, the starter must not present a danger to persons and equipment.
- The starter does not have to be usable for continued use without repairs or parts replacements.
- Damage to the starter or its components is permissible.

### Conditions for fulfilling type "2" coordination (IEC/EN 60947-4-1)

- The stated short-circuit current  $I_q$  must be safely interrupted.
- In the event of a short-circuit, the starter must not present a danger to persons and equipment.
- The starter must be suitable for continued use.
- No damage may occur to the starter – with the exception of welding of the contactor contacts – provided they can be easily separated (e.g. with a screwdriver) without any significant deformation.

MSC-D-0,25-M7(24VDC) 283154	1 off	PKZM0-0,25	DILM7-...	PKZM0-XDM12	The direct-on-line starter (complete unit) consists of a PKZM0 motor-protective circuit-breaker and a DILM contactor. With the adapter-less top-hat rail mounting of starters up to 15 A, only the motor-protective circuit-breaker on the top-hat rail requires an adapter. The contactors are provided with mechanical support via a mechanical connection element. Control wire guide with max. 6 conductors up to 2.5mm external diameter or 4 conductors up to 3.5mm external diameter. From 16 A, the motor-protective circuit-breaker and contactor are mounted on the top-hat rail adapter plate. The connection of the main circuit between PKZ and contactor is established with electrical contact modules. When using the auxiliary contacts DILA-XHIT... (→ 5/29) the plug-in electrical connector can be removed without removing the front mounting auxiliary contacts.

The motor-starter combinations consists of the motor-protective circuit-breakers and high-capacity contact modules which have matching profiles. They conform to IEC/EN 60947-4-1 or VDE 0660 part 102.  $I_q$  = rated conditional short-circuit current.

The combinations can be operated with or without manual reset. In the Manual position, the combination is blocked against automatic restarting. It must be reset locally. In the Auto position, the combination automatically switches on again when the bimetallic elements have cooled down.

The motor-starter combination consists of motor-protective circuit-breaker and contactor modules. They conform to IEC/EN 60947-4-1 or VDE 0660 part 102.  $I_q$  = rated conditional short-circuit current.

The combinations can be operated with or without manual reset. In the Manual position, the combination is blocked against automatic restarting. They must be reset locally. In the Auto position, the combination automatically switches on again when the bimetallic elements have cooled down.

The DOL starter (complete) consists of a PKZM0 motor-protective circuit-breaker and a DILM contactor. This combination is mounted on the busbars. The connection of the main circuit between PKZ and contactor is established with electrical contact modules.

**System description**

The SmartWire connection system allows the connection of switchgear to a PLC without complex control wiring. The control wiring between the PLC and the switchgear is replaced by the plug-in SmartWire module for DILM and a pre-manufactured connection cable. The wiring complexity is drastically reduced and wiring errors are impossible. There are further savings also with the assembly, the commissioning and the search for faults on the machine or system.

The inputs and outputs of the PLC are replaced by the SmartWire module for DILM and the control wiring termination points are not necessary. This simplifies the engineering and the documentation of the machine or system.

The SmartWire connection system is an expansion of the well proven Moeller switchgear and is designed to be an accessory for the standard device. The well know system accessories can still be used and the normal flexibility of the switchgear is still available. By using standard devices the necessary stores level is reduced and the worldwide availability of replacement parts is of course guaranteed. The connection to the various field Buses is via Gateways or interface modules available from another manufacturer.

**Features**

- Gateway
  - Connects the SmartWire modules with the field Bus
  - Supports the field Buses PROFIBUS-DP, CANopen and easy-NET
  - Supplies the control voltage for the motor starter or contactor
  - Supplies the supply voltage for the SmartWire connection system
  - Configuration button for automatic addressing of the SmartWire modules for DILM
  - Supports max. 16 SmartWire modules for DILM
- Interface from third party devices e.g. for the I/O System XI/ON
  - Connection to the field Buses PROFIBUS-DP, CANopen and DeviceNET
- SmartWire-Module for DILM
  - Pluggable onto contactors of the xStart range
  - Suitable for contactors DILM7 to DILM32 (24 V DC), DILMC7 to DILMC32 (24 V DC), DILMP20 (24 V DC) or motor starter MSC-... (24 V DC)
  - Use the standard switchgear of the xStart range
  - Suitable for DOL and reversing starters
  - Use the accessories of the xStart range
  - Suitable for contactor combinations with PKZ or with Z overloads
  - Integrated switch position monitoring of the contactors
  - Integrated mechanical switch position display
  - Actuation of the contactors
  - Interrogation of a potential-free contact, e.g. NHI-E-10-PKZ0
  - Electrical interlocking, e.g. possible with reversing starters
  - LED for status and diagnostic display
  - Connection to Gateway or interface from third party devices
- SmartWire-Power-Module
  - Supply of the 24 V-DC control voltage for actuation of DILM contactors
  - Assembly of emergency-stop groups
  - Increase the control voltage power in the SmartWire chain
- Safety engineering
  - Emergency-Stop disconnection as per IEC/EN 954-1, Switching Category 2
  - Central switch off of control voltage at the Gateway or SmartWire Power module
  - Combination with safety conform switchgear possible

Transmission rate: 9.6 kBit/s to 12 MBit/s  
 9 pole SUB-D socket  
 Address range: 1 – 126  
 - Connection to SmartWire module as Master.  
 - supports 16 SmartWire modules.

Conne

**Modules**

SmartWire module for DILM

SmartWire module to assemble on the contactors DILM7...DILM32.  
 - One module is necessary per contactor.  
 - Connection to SmartWire- Gateway as Slave.  
 - Max. 16 SmartWire modules per chain.  
 - 1 digital input for potential-free contact.  
 - Signalling contactor switch position.

**SWIRE-DIL**  
107028

1 off

- Take account of the max. current consumption of the contactor coils per SmartWire chain.
- Length of connection cable at the input and the electrical interlock < 2.8 m.
- A2 terminal of the contactor must not be bridged.
- Electrical interlocking only possible via the terminals on the module for DILM.
- Wiring kits DILM 12-XRL and PKZM0-XRM12 cannot be used.
- Connection terminals for electrical interlocking are not suitable for safety technology.

SmartWire Power-Module

Power module for supplying the control voltage.  
 - Connection on SmartWire Gateway as interactive station (no address).

**SWIRE-PF**

For the connection of the SmartWire devices the cable lengths depend upon the assembly of the devices.

Applications	Cable length
Connection from Power module to SWire-DIL with mounting beside PKZ	250 mm
Connection from Power module to SmartWire DIL with mounting beside DILM	150 mm
Connection from Gateway to SWire-DIL with mounting beside PKZ	250 mm
Connection from Gateway to SWire-DIL with mounting beside DILM	250 mm

**Magnet systems**

The number of motor starters or DILM contactors that can be connected is dependant upon the power consumption of the magnet systems per SmartWire chain. To increase the number of SmartWire modules that can be connected Power modules can be used.
