## SMART 4.3" TFT DISPLAY

$480 \times 272$ Built-in Intelligence, Fonts and Memory

## FEATURES

* POWER SUPPLY +5V / 180mA(typ.)
* TFT GRAPHIC DISPLAY WITH BULIT-IN GRAPHIC FUNCTIONS
* 480x272 DOTS, 16-BIT $(65,536)$ COLORS WITH LED BACKLIGHT
* LANDSCAPE AND PORTRAIT MODE ( $272 \times 480$ ) BY COMMAND
* 4MB ON BOARD FLASH FOR FONTS, PICTURES, ANIMATIONS AND MACROS
* 8 PRE-DEFINED FONTS, CAN BE EXPANDED
* FONT ZOOM FROM 2 mm TO about 80 mm , TURNABLE IN $90^{\circ}$ STEPS
* 3 DIFFERENT INTERFACES ON BOARD: RS-232, I²C-BUS OR SPI-BUS
* POSITIONING ACCURATE TO THE PIXEL WITH ALL FUNCTIONS
* DRAW LINE, PLACE A DOT, AREA, BARGRAPH...
* PICTURES, ANIMATIONS; MIX TEXT AND GRAPHIC
* MULTI-LINGUAL WITH MACRO PAGES
* BACKLIGHT BRIGHTNESS BY SOFTWARE
* ANALOGUE OR CAPACITIVE TOUCH PANEL: VARIABLE GRID
* FREE DEFINABLE KEY AND SWITCH
* 8 DIGITAL IN- AND 8 DIGITAL OUTPUT
* 2 ANALOGUE INPUTS COMFORTABLE TO USE

## ORDERING CODES

## DISPLAYS

TFT 480x272 DOTS, WHITE LED BACKLIGHT
AS ABOVE, BUT WITH RESISTIVE TOUCH PANEL
EA eDIPTFT43-A EA eDIPTFT43-ATP
AS ABOVE, BUT WITH CAPACITIVE TOUCH PANEL (SAME SIZE AS -ATP) EA eDIPTFT43-ATS AS ABOVE, BUT WITH CAPACITIVE MOUNTING PANEL EA eDIPTFT43-ATC

## STARTERKIT

INCLUDES EA eDIPTFT43-ATP AND EVALUATION BOARD WITH USB FOR DIRECT CONNECTION TO PC AND INTERFACE BOARDS FOR
CONNECTION WITH YOUR HOST SYSTEM
EA EVALeDIPTFT43
EA EVALeDIPTFT43C
AS ABOVE, BUT WITH EA eDIPTFT43-ATC
ADDTIOTNAL PARTS
MOUNTING BEZEL (ALUMINIUM), BLACK ANODIZED
EA B254-20

ELEGTRONIC
ASSEMBLY

## GENERAL

The EA eDIP series of displays are the world's first displays with integrated intelligence. In addition to a variety of integrated fonts that can be used with pixel accuracy, they offer a whole range of sophisticated graphics functions.
The displays are ready for operation immediately with an operating voltage of 5 V . They are controlled via one of the 3 integrated interfaces: RS-232, SPI or I²C. The displays are "programmed" by means of high-level language-type graphics commands. There is no longer any need for the time-consuming programming of character sets and graphics routines. The ease of use of this display with its touch panel dramatically reduces development times.

## HARDWARE

The display is designed to work at an operating voltage of +5 V . Data transfer is either serial and asynchronous in RS-232 format or synchronous via the SPI or ${ }^{2} \mathrm{C}$ specification. To improve data security, a simple protocol is used for all types of transfer.

## TOUCH PANEL

All versions are also available with an integrated touch panel: You can make entries and menu or bar graph settings by touching the display. The labeling of the "keys" is flexible and can also be changed during runtime (different languages, icons). The drawing of the individual "keys" and the labeling is handled by the integrated software. Depending on the field of aplication, you can use either the anolgue resitive version, designed for the use with pens, thick gloves, or the capacitive version with its immune hard glas surface.

## LED BACKLIGHT

All displays are equipped with modern, energy-saving LED illumination. Brightness can be varied 0~100\% by command.
In 24-hour operation, the illumination should be dimmed or switched off as often as possible to increase their lifetime.

## SOFTWARE

This display is programmed by means of commands, such as Draw a rectangle from $(0,0)$ to $(479,271)$. No additional software or drivers are required. Strings and images can be placed with pixel accuracy. Text and graphics can be combined at any time. Different character sets can be used at same time. Each character set and the images can be zoomed from 2 to 8 times and rotated in $90^{\circ}$ steps. With the largest character set, the words and numbers displayed will fill the screen.

## ACCESSORIES

Evaluation-Board (Programmer) for internal data flash memory
The display is shipped fully programmed and with all fonts. The additional Evaluation-Board is thus generally not required.
However, if the internal character sets have to be changed or extended, or if images or macros have to be stored internally, the Evaluation-Board EA 9777-2USB, which is available as an accessory, will burn the data/images you have created into the on-board data flash memory (4 MB) permanently. The Evaluation-Board runs under Windows and is connected to the PC's USB interface. It is shipped with an interface cable and the installation software. The Evaluation-Board is equipped with serveral LEDs, pushbottons and potentiometer to test all peripherial modes of the eDIP.
Interface-Expansion for Evaluation-Board (included in the Starter-Kit):
Wtih the expansion EA 9777-2PE for the Evaluation-Board all interfaces of the display are made available with the help from small adapter boards: RS-232, RS-485, SPI, I² $\mathrm{C}, \mathrm{RS}-232$ (CMOS level). Further information you will find in the datasheet of the Evalution-Board.

## RS-232 INTERFACE

If the display is wired as shown below, the RS-232 interface is selected. The pin assignment is specified in the table on the right.
The RxD and TxD lines lead 5 V (CMOS level) to a microcontroller, for example, for direct connection.
If "genuine" RS-232 levels are required (e.g. for connection to a PC), an external level converter (e.g. MAX232) is required.

| Pinout eDIPTFT43-A: RS-232/RS-485 mode |  |  |  |  |  |  |  |

## BAUD RATES

The baud rate is set by means of pins 6,7 and 8 (baud 0 to 2 ). The data format is set permanently to 8 data bits, 1 stop bit, no parity. RTS/CTS handshake lines are not required. The required control is taken over by the integrated software protocol (see pages 10 and 11).

| Baud Rates |  |  |  |

| 0 | 0 | 1 | 19200 |
| 1 | 0 | 1 | 38400 |
| 0 | 1 | 1 | 57600 |
| 1 | 1 | 1 | 115200 |
| 0 | 0 | 0 | 230400 |

APPLICATION EXAMPLE „REAL" RS-232 INTERFACE
The eDIP fits for direct connection to a RS-232 interface with CMOS level (VDD).
If you have an interface with $\pm 12 \mathrm{~V}$ level, an external levelshifter is needed

APPLICATION EXAMPLE: RS-485 INTERFACE
With an external converter (e.g. SN75176), the EA eDIP can be connected to a 2-wire RS-485 bus. Large distances of up to 1200 m can thus be implemented (remote display). Several EA eDIP displays can be operated on a single RS-485 bus by setting addresses.

Addressing:

- Up to eight hardware addresses (0 to 7) can be set by means of Pins ADRO..ADR2
- The eDIP with the address 7 is selected and ready to receive after power-on.
- The eDIPS with the addresses 0 to 6 are deselcted after power-on
- Up to 246 further software addresses can be set by means of the '\#KA adr' command in the power-on macro (set eDIP externally to address 0 )

## APPLICATION EXAMPLE: USB INTERFACE

With an external converter (e.g. FT232R) from FTDI the eDIP can be connected to an USB-Bus.
Virtual-COM-Port drivers are available for different Systems on the FTDI Homepage:
http://www.ftdichip.com/drivers/vcp.htm.

## SPI INTERFACE

If the display is wired as shown below, SPI mode is activated. The data is then transferred via the serial, synchronous SPI interface.

The transfer parameter will be set via the pins DORD, CPOL and CPHA.

| Pinout eDIPTFT43-A: SPI mode |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1 | GND |  | Ground Potential for logic (0V) | 21 | GND |  | Ground (0V) |
| 2 | VDD |  | Power supply for logic ( +5 V ) | 22 | VDD |  | Power supply ( +5 V ) |
| 3 | NC |  | do not connect | 23 | AIN1 |  | inpu |
| 4 | NC |  | do not connect | 24 | AIN2 | In | DC impedance 1MOhm |
| 5 | RESET | In | L: Reset | 25 | OUT1 / MO8 |  | digital outp |
| 6 | SS | In | Slave Select | 26 | OUT2 / MO7 |  | maximum current: |
| 7 | MOSI | In | Serial In | 27 | OUT3/MO6 |  | $1 \mathrm{OL}=1 \mathrm{OH}=10 \mathrm{~mA}$ |
| 8 | MISO | Out | Serial Out | 28 | OUT4/MO5 |  |  |
| 9 | CLK | In | Shift Clock | 29 | OUT5 / MO4 | Out | alternativ up to 8 matrix |
| 10 | DORD | In | Data Order (0=MSB first; 1=LSB first) | 30 | OUT6/MO3 |  | (reduces the digital |
| 11 | SPIMO | In | connect to GND for SPI interface | 31 | OUT7 / MO2 |  | output lines, see chapter |
| 12 | NC |  | do not connect | 32 | OUT8 / MO1 |  | external keyboard) |
| 13 | DPOM | In | L: disable PowerOnMacro do not connect for normal operation | 33 | IN1 / M18 |  |  |
| 14 | CPOL | In | Clock Polarity ( $0=$ LO 1=HI when idle) | 34 | IN2 / M17 |  | 8 digital inputs |
| 15 | CPHA | In | Clock Phase sample 0=1st; $1=2 \mathrm{nd}$ edge | 35 | IN3 / M16 |  | open-drain with internal |
| 16 | Buzz | Out | Buzzer output | 36 | IN4 / M15 |  | pullup 20..50k |
| 17 | DPROT | In | L: Disable Smallprotokoll do not connect for normal operation | 37 | IN5 / MI4 | In | alternativ up to 8 matrix keybeard input lines |
| 18 | DNC | Out | L: internal, do not connect | 38 | IN6 / Ml3 |  | (reduces the digital input |
| 19 | WP | In | L: Writeprotect for DataFlash | 39 | IN7 / MI2 |  | lines, see chapter |
| 20 | TEST SBUF | $\begin{aligned} & \text { IN } \\ & \text { Out } \end{aligned}$ | open-drain with internal pullup 20..50k IN (Power-On) L: Testmode OUT L: data in sendbuffer | 40 | IN8 / M11 |  | external keyboard) |

Note:
The pins DORD, CPOL, CPHA, DPOM, DPROT and TEST/SBUF have an internal pullup, which is why only the LO level ( $0=G N D$ ) is to be actively applied. These pins must be left open for a Hi level.
On pin $20(S B U F)$ the display indicates with a low level that data is ready to be retrieved from the internal send buffer.
The line can be connected to an interrupt input of the host system, for example.

## DATA TRANSFER SPI

Write operation: a clock rate up to 200 kHz is allowed without any stop. Together with a pause of $100 \mu \mathrm{~s}$ between every data byte a clock rate up to 3 MHz can be reached.

Read operation: to read data (e.g. the "ACK" byte) a dummy byte (e.g.0xFF) need to be sent.
Note that the EA eDIP for internal operation does need a short time before providing the data; therefore a short pause of min. $6 \mu \mathrm{~s}$ (no activity of CLK line) is needed for each byte.

## ${ }^{2}{ }^{2} \mathrm{C}$-BUS INTERFACE

If the display is wired as shown below, it can be operated directly on an $I^{2} \mathrm{C}$ bus.
8 different base addresses and 8 slave addresses can be selected on the display.

Data transfer is possible at up to 100 kHz . However, if pauses of at least $100 \mu \mathrm{~s}$ are maintained between the individual bytes during transfer, a byte can be transferred at up to 400 kHz .

| Pinout eDIPTFT43-A: I2C mode |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pin | Symbol | In/Out | Function | Pin | Symbol | In/Out | Function |
| 1 | GND |  | Ground Potential for logic (0V) | 21 | GND |  | Ground (0V) |
| 2 | VDD |  | Power supply for logic (+5V) | 22 | VDD |  | Power supply (+5V) |
| 3 | NC |  | do not connect | 23 | AIN1 | In | analogue input $0 . .5 \mathrm{~V}$ |
| 4 | NC |  | do not connect | 24 | AIN2 | In | DC impedance 1MOhm |
| 5 | RESET | In | L: Reset | 25 | OUT1 / MO8 |  | 8 digital outputs |

DATA TRANSFER I²C-BUS
principle I2C-bus transfer:

- ${ }^{2} \mathrm{C}$-Start
- Master-Transmit: EA eDIP-I²C-address (e.g. \$DE), send smallprotocol package (data)
- I2C-Stop
- I2C-Start
- Master-Read: EA eDIP-I²C-Address (e.g. \$DF), read ACK-byte and opt. smallprotocoll package (data)
- $I^{2}$ C-Stop

Read operation: for internal operation the EA eDIP does need a short time before providing the data; therefore a short pause of min. $6 \mu \mathrm{~s}$ is needed for each byte (no activity of SCL line).

## ANALOGUE INPUT AIN1 AND AIN2 (PIN 23+24)

For analogue measurement 2 inputs with a range of $0 . . V D D$ are available. Each input is grounded (GND) and DC impedance is $1 \mathrm{M} \Omega$. Please make sure that only positive voltages will be supplied there. Internal resolution is 10 Bit, equal to a 3-digit DVM modul. Linearity (after adjustment) is around $0.5 \%$.

## Adjustment

Analogue inputs are not calibrated when shipped out. A procedure for adjustment may be like that:
1.) Put a well known voltage within a range of $2-V D D$ to analogue input (example: $3,0 \mathrm{~V}$, AIN1)
2.) Run command for calibration (see page 16). Example: „ESC V @ 13000 ".

Each input query can be done via serial interface or directly shown on display (as digits or bargraph in various colors and sizes).
Best way for direct visualisation are Process-macros or one of Analogue-macros (e.g. starting at every voltage change, or above/below a limit).
Both input lines are scaleable from 0 to $\pm 9999.9$. Scaling will be done via definition at 2 voltages „value1=string1;value2=string2" (see table on page 16).

## DIGITAL INPUT AND OUTPUT

The EA eDIP is featured with 8 digital input and 8 digital output lines (CMOS level, grounded).
8 outputs (Pin 25-32)
Each line can be controlled individually using the "ESCY W" command. A maximum current of 10 mA can be switched per line. This give the opportunity to drive a low power LED in direct way. To source higher current please use an external transistor. 8 inputs (Pin 33-40)
Each input provides an internal $20 . .50 \mathrm{k} \Omega$ pull-up resistor, so it is possible to connect
 a key or switch directly between input and GND. The inputs can be queried and evaluated directly via the serial interface („ESCY R").
In addition to that every port change may start an individual port - or bit- macro (see p. 28). The command "ESC Y A 1" activates automatic port query. Every alteration of inputs firstly
 calls bit macros and afterwards port macros. If there is no definied macro, the new status is transfered into the send buffer (refer to p. 19).
Note: The logic circuitry is designed for slow operations; in other words, more than 3 changes per second cannot be easily executed.

Extended outputs (V1.4 and higher)
It is possible to connect 1 to 32 chips like 74 HC 4094 to the eDIP (OUT1...OUT3), this is why it is attainable to have 8 to 256 additional outputs. The command "ESCY E n1 n2 n3" (see p. 17) provides a comfortable way to control the outputs.

## EXTERNAL KEYBOARD

A keyboard (anything from individual keys to a $8 \times 8$ matrix keyboard) can be connected to the I/Oports. The command 'ESCYMn1 n2 n3' defines the count of input lines ( $\mathrm{n} 1=1 . .8$ ) and output lines ( $\mathrm{n} 2=1 . .8$ ). n3 set debounce function with 10 ms steps ( $\mathrm{n} 3=0 . .15$ ). Please note that count of digital input and output lines will be reduced while connecting an external keyboard at the same port. Each key is connected with 1 output and 1 input. All inputs are terminated with a $20 . .50 \mathrm{k} \Omega$ pull-up resistor. For double-keytroke function decoupling of outputs is necessary. For that please use schottky diodes (e.g. BAT 46).

## Transmitting the keystrokes

At each keystroke, the associated key number (1..64) is transmitted or - if a corresponding MatrixMacro is defined, Matrix-Macro will be started. The release of the key is not transmitted. If the release of the key is to be transmitted as well, this can be done by defining Matrix-Macro no. 0.
(see page 19: Responses of EA eDIPTFT43-A)
Calculation of key numbers:
Key_number = (output-1) * count_of_inputs + input (output = MOx, input = MIx).

## Examples

- 2x2 matrix: Command 'ESC Y M 22 ..' defines the 2x2 matrix. Keypad will need input lines MI1, MI2 and output lines MO1, MO2. Output lines are decoupled by diodes; this is for double keystrokes necessary. 6 input and 6 output lines remain free for other requirements.
- 1x4 matrix: Command 'ESC Y M 14 ..' defines the 1x4 matrix. Keypad will need output lines MO1..MO4 and a single input line MI1. With that connection 7 input and 4 output lines remain free for other requirements.
- 4x0 matrix: Using one single output only (physically 4x1 Matrix), all keys can switch to GND. So no output line is necessary and comman 'ESC Y M 40 ..' defines 4 input lines onyl. With that connection 4 input and 8 output lines remain free for other requirements.
- 4x4 matrix: Command 'ESCY M 44 ..' defines the $4 \times 4$ matrix. Keypad will need input lines MI1..MI4 and output lines MO1..MO4. Output lines are decoupled by diodes; this is for double keystrokes necessary. 4 input and 4 output lines remain free for other requirements.

$2 \times 2$ Matrix

1x4 Matrix

$4 \times 4$ Matrix

## DATA TRANSFER PROTOCOL (SMALL PROTOCOL)

The protocol has an identical structure for all 3 interface types: RS-232, SPI and I ${ }^{2} \mathrm{C}$. Each data transfer is embedded in a fixed frame with a checksum (protocol package). The EA eDIPTFT43-A acknowledges this package with the character <ACK> (=\$06) on successful receipt or <NAK> (=\$15) in the event of an incorrect checksum or receive buffer overflow. In the case of <NAK>, the entire package is rejected and must be sent again.
Receiving the <ACK> byte means only that the protocol package is ok, there is no syntax check for the command.
Note: it is neccessary to read the <ACK> byte in any case.
If the host computer does not receive an acknowledgment, at least one byte is lost. In this case, the set timeout has to elapse before the package is sent again.
The raw data volume per package is limited to 255 bytes (len <= 255). Commands longer than 255 bytes (e.g. Load image ESC UL...) must be divided up between a number of packages. All data in the packages are compiled again after being correctly received by the EA eDIPTFT43-A. Deactivating the small PROTOCOL
For tests the protocol can be switched off with an L level at pin $17=$ DPROT. In normal operation, however, you are urgently advised to activate the protocol. If you do not, any overflow of the receive buffer will not be detected.

Building the smallprotocol packages

## Command/Data to the display

| $>$ | <DC1> | len | data... | bcc |  |
| :--- | :--- | :--- | :--- | :--- | :---: |
|  | $<A C K>$ |  |  |  |  |

$<D C 1>=17($ dec. $)=\$ 11 \quad<A C K>=6($ dec. $)=\$ 06$
len $=$ count of user data (without $\langle D C 1\rangle$, without checksum bcc)
$b c c=1$ byte $=$ sum of all bytes incl. $\langle D C 1\rangle$ and len, modulo 256

The user data is transferred framed by <DC1>, the number of bytes (len) and the checksum (bcc). The display responds with <ACK>.

```
void SendData(unsigned char *buf, unsigned char
len)
{
    unsigned char i, bcc;
    SendByte(0x11); // Send DC1
    bcc = 0x11;
    SendByte(len); // Send data length
    bcc = bcc + len;
    for(i=0; i < len; i++) // Send buf
    { SendByte (buf[i]);
        bcc = bcc + buf[i];
        }
    SendByte(bcc); // Send checksum
}
// Send checksum
,C" source code to transmit a data package
```

Request for content of send buffer

| $>$$<$ | <DC2> | 1 | S | bcc |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | <ACK> |  |  |  |  |  |
| $<$ | <DC1> | len | data... |  |  | bcc |
| $<D C 2>=18($ dec. $)=\$ 12 \quad 1=1($ dez. $)=\$ 01 \quad S=83($ dez. $)=\$ 53$ |  |  |  |  |  |  |
| $<A C K>=6(\text { dec. })=\$ 06$ |  |  |  |  |  |  |
| len $=$ count of user data ( without $\langle D C 2\rangle$, without checksum bcc) |  |  |  |  |  |  |
| $b c c=1$ byte $=$ sum of all bytes incl. $\langle$ DC2>, modulo 256 |  |  |  |  |  |  |

The command sequence <DC2>, 1, S, bcc empties the display's send buffer. The display replies with the acknowledgement <ACK> and the begins to send all the collected data such as touch keystrokes.

## Request for buffer information

$\langle D C 2\rangle=18($ dec. $)=\$ 12 \quad l=1($ dez. $)=\$ 01 \quad I=73($ dez. $)=\$ 49$
$\langle A C K\rangle=\sigma($ dec. $)=\$ 06$
send buffer bytes ready $=$ count of bytes stored in send buffer
receive buffer bytes free $=$ count of bytes for free receive buffer
$b c c=1$ byte $=$ sum of all bytes incl. $\langle D C 2\rangle$, modulo 256

## Protocol settings

$<D C 2>=18($ dec. $)=\$ 12 \quad 3=3($ dez. $)=\$ 03 \quad D=68($ dez. $)=\$ 44$
packet size for send buffer $=1 . .128$ (standard: 128)
timeout $=1 . .255$ in $1 / 100$ seconds (standard: $200=2$ seconds)
$b c c=1$ byte $=$ sum of all bytes incl. $\langle D C 2\rangle$, modulo 256
$<A C K>=6($ dec. $)=\$ 06$

This command queries whether user data is ready to be picked up an how full the display's receive buffer is.

Request for protocol settings

$<D C 2>=18($ dec. $)=\$ 12 \quad 1=1($ dez. $)=\$ 01 \quad P=80($ dez. $)=\$ 50$
$<A C K>=6$ (dec. $)=\$ 06$
max. packet size $=$ count of maximum user data for 1 package $(e D I P T F T 43-A=255)$
akt. send packet size $=$ current package size for send
akt. timeout $=$ current timeout in $1 / 100$ seconds
bcc $=1$ byte $=$ sum of all bytes incl. $\langle D C 2\rangle$, modulo 256

Repeat the last package

$<D C 2>=18($ dec. $)=\$ 12 \quad 1=1($ dez. $)=\$ 01 \quad R=82($ dez. $)=\$ 52$
$<A C K>=6$ (dec.) $=\$ 06$
$<D C 1>=17($ dec. $)=\$ 11$
len $=$ count of user data in byte (without ckecksum, without $\langle D C 1\rangle$ or $\langle D C 2\rangle$ )
$b c c=1$ byte $=$ sum of all bytes incl. $\langle D C 2\rangle$ and len, modulo 256
Adressing (only for RS232/RS485)

$<D C 2>=18($ dec. $)=\$ 12 \quad 3=3($ dez. $)=\$ 03 \quad A=65($ dez. $)=\$ 41$
select or deselect: ' $S^{\prime}=\$ 53$ or ${ }^{\prime} D^{\prime}=\$ 44$
$a d r=0 . .255$
$b c c=1$ byte $=$ sum of all bytes incl. $\langle D C 2>$ and adr, modulo 256
$<A C K>=6($ dec. $)=\$ 06$

If the most recently requested package contains an incorrect checksum, the entire package can be requested again. The reply can then be the contents of the send buffer (<DC1>) or the buffer/protocol information (<DC2>).

## TERMINAL MODE

When you switch the unit on, the cursor flashes in the first line, indicating that the display is ready for operation. All the incoming characters are displayed in ASCII format on the terminal (exception: CR,LF,FF,ESC,'\#'). The prerequisite for this is a working protocol frame or a deactivated protocol (see pages 10 and 11).
Line breaks are automatic or can be executed by means of the 'LF' character. If the last line is full, the contents of the terminal scroll upward. The 'FF' character (page feed) deletes the terminal.
The character '\#' is used as an escape character and thus cannot be displayed directly on the terminal. If the character ' $\#$ ' is to be output on the terminal, it must be transmitted twice: '\#\#'.
The size of the terminal-window can be set by command 'ESC TW'.
Attention: Graphic commands are able to draw inside terminal window. For example 'ESC DL' will delete terminal window, too.

## USING THE SERIAL INTERFACE

The operating unit can be programmed by means of various integrated commands. Each command begins with ESCAPE followed by one or two command letters and then parameters.
There are two ways to transmit commands:

## 1. ASCII mode

- The ESC character corresponds to the character ‘\#' (hex: \$23, dec: 35).
- The command letters come directly after the '\#' character.
- The parameters are transmitted as plain text (several ASCII characters) followed by a separating character (such as a comma ',') - also after the last parameter e.g.: \#GD0,0,479,271,
- Strings (text) are written directly without quotation marks and concluded with CR (hex: \$0D) or LF (hex: \$0A).

## 2. Binary mode

- The escape character corresponds to the character ESC (hex: \$1B, dec: 27).
- The command letters are transmitted directly.
- The coordinates xx and yy are transmitted as 16-bit binary values (first the LOW byte and then the HIGH byte).
- All the other parameters are transmitted as 8-bit binary values (1 byte).
- Strings (text) are concluded with CR (hex: \$0D) or LF (hex: \$0A) or NUL (hex: \$00).

No separating characters, such as spaces or commas, may be used in binary mode.
The commands require no final byte, such as a carriage return (apart from the string \$00).

## ALL COMMANDS AT A GLANCE

The built-in intelligence allows an easy creation of your individual screen content. Below mentioned commands can be used either directly via the serial interface (see page 12) or together with the selfdefinable macro (see pages 26/28).

| EA eDIPTFT43-A: Terminal commands |  |  |  |  |  |  |  |  |  | after reset |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Command | Codes |  |  |  |  |  |  |  | Remarks |  |
| Set terminal color | ESC | F | T | fg | bg |  |  |  | Preset color for terminal mode: $\mathrm{fg}=$ foreground color; $\mathrm{bg}=$ background color | 8,1 |
| Define window | ESC | T | W | n1 | C | L | W | H | The terminal output is executed with font $\mathrm{n} 1: 1=8 \times 8 ; 2=8 \times 16$ only within the window from columr and line L (=upper-left corner) with a width of W and a height of H (specifications in characters). Display organisation $480 \times 272$ : $\mathrm{C}=1 . .60$; $\mathrm{L}=1 . .34 / 17$; $272 \times 480$ : $\mathrm{C}=1 . .34 ; \mathrm{L}=1 . .60 / 30$ | $\begin{gathered} C 8 \times 16 \\ 1,1 \\ 60,17 \end{gathered}$ |
| Form feed FF (dec:12) | ${ }^{\wedge}$ |  |  |  |  |  |  |  | The contents of the screen are deleted and the cursor is placed at pos. (1,1) |  |
| Carriage return CR (13) | ${ }^{\wedge} \mathrm{M}$ |  |  |  |  |  |  |  | Cursor to the beginning of the line on the extreme left |  |
| Line feed LF (dec:10) | $\wedge$ |  |  |  |  |  |  |  | Cursor 1 line lower, if cursor in last line then scroll |  |
| Position cursor Cursor on/off Save cursor position |  |  | $\begin{aligned} & \hline \mathbf{P} \\ & \mathrm{C} \\ & \mathrm{~S} \end{aligned}$ | $\begin{gathered} \mathrm{C} \\ \mathrm{n} 1 \end{gathered}$ | L |  |  |  | C=column; L=line; origin upper-left corner ( 1,1 ) $\mathrm{n} 1=0$ : Cursor is invisible; $\mathrm{n} 1=1$ : Cursor flashes; The current cursor position is saved | $\begin{gathered} 1,1 \\ 1 \end{gathered}$ |
| Restore cursor position | Esc | T | R |  |  |  |  |  | The last saved cursor position is restored |  |
| Terminal off |  |  | A |  |  |  |  |  | Terminal display is switched off; outputs are rejected |  |
| Terminal on |  |  | E |  |  |  |  |  | Terminal display is switched on; | on |
| Output version |  |  | V |  |  |  |  |  | The version no. is output in the terminal e.g. "EA eDIPTFT43-A V1.0 Rev.A" |  |
| Output projectname | ESC | T | J |  |  |  |  |  | The macrofile-projectname is output in the terminal e.g. "init / delivery state" |  |
| Output interface |  |  | Q |  |  |  |  |  | The used interface is output in the terminal e.g "RS232,115200 baud,ADR: \$07" |  |
| Output informationen | ESC | T | 1 |  |  |  |  |  | The terminal is initialisized and cleared; the software version, hardware revision, macrofile-projectname and CRC-checksum are output in the terminal |  |

| EA eDIPTFT43-A: Analogue input AIN1, AIN2 commands |  |  |  |  |  |  |  |  |  | after <br> reset |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Command | Codes |  |  |  |  |  |  |  | Remarks |  |
| Commands for analogue inputs |  |  |  |  |  |  |  |  |  |  |
| Calibration | ESC | V | @ | ch | xx1 |  |  |  | Calibration procedure is as follows: <br> 1.) Apply defined voltage (3.5V) to AIN1 (channel1) or AIN2 (channel2) <br> 2.) Run this command with channel information $\mathrm{ch}=1 . .2$ and $\mathrm{xx} 1=\mathrm{voltage}$ value [ mV ] (16-Bit) <br> e.g. 4.0V on AIN1; Command: '\#V @ 1,4000;' | not calib rated |
| Enable/disable AIN scan | ESC | v | A | n1 |  |  |  |  | $\mathrm{n} 1=0$ disables input scan for AIN1 and AIN2; $\mathrm{n} 1=1$ enable input scan | 0 |
| Send analog value |  |  | D | ch |  |  |  |  | Voltage in [mV] will be sent (to sendbuffer) for channel ch=1..2 |  |
| Limit for analog macro |  |  | K | ch | n1 | n2 | n3 |  | Sets two limits for channel $\mathrm{ch}=1 . .2$. <br> n1=lower limit [ $\mathrm{mV} / 20$ ]; n2=upper limit [ $\mathrm{mV} / 20$ ]; n3=hysteresis [ mV ] <br> Related to this limits serveral analogmacros can be started automatically. | 0 |
| Redefine analoguemacro (since V1.1) | ESC | V | M | n1 | n2 |  |  |  | Assign analoguemacrofunction $\mathrm{n} 1=0 . .19$ with analoguemacro number $\mathrm{n} 2=0 . .255$. |  |
| Bargraph for AIN1/AIN2 | ESC | V | B | ch | no |  |  |  | Assigns bargraph no=1.. 20 to analogue input ch=1.. 2 <br> (it is possible to assign more than one bargraph to an anlogue input). <br> Define start- endvalues (sv, ev) for bargraph in [mV/20] (see comand 'ESC B RLOU') |  |
| Instrument for AIN1/AIN2 (since V1.4) |  |  | + | ch | no |  |  |  | Assigns instrument no=1..4 to analogue input ch=1..2 Define start- endvalues (sv, ev) for instrument in [mV/20] |  |
| Redraw bargraph |  |  | R | ch |  |  |  |  | Redraw all bar graphs defined for channel ch=1..2 |  |
| User values - Format text output |  |  |  |  |  |  |  |  |  |  |
| User value color | ESC | F | V | ch | fg | bg |  |  | Set color for string output of channel ch=1..2; fg= foreground, $\mathrm{bg}=$ background color | 8,1 |
| User value Font |  | V | F | ch | n1 |  |  |  | Set font n 1 for channel $\mathrm{ch}=1 . .2$ | 5 |
| User value zoom |  |  | z | ch | n1 | n2 |  |  | Set zoom factor for channel ch=1..2; n1=X-Zoom 1x..8x; n2=Y-Zoom 1x..8x | 1,1 |
| User value additional width/height User value angle |  |  | Y w | ch <br> ch | $\begin{aligned} & \text { n1 } \\ & \text { n1 } \end{aligned}$ | n2 |  |  | n1=0..15: additional width left/right; <br> n2=0..15: additional height top/bottom for channel ch=1..2; <br> Set writing angle for channel ch=1..2; $n 1=0: 0^{\circ} ; n 1=1: 90^{\circ} ; n 1=2: 180^{\circ} ; n 1=3: 270^{\circ}$; | $\begin{gathered} 0,0 \\ 0 \\ \hline \end{gathered}$ |
| User values / scaling | ESC | V | E | ch |  |  |  | NUL | Set user value for channel ch=1..2. <br> Format String: "mV1=uservalue1;mV2=uservalue2". 'NUL' (\$00) = termination Assign two voltages $(0 . .5000 \mathrm{mV})$ to user defined values max. range: $41 / 2$ digits 19999 + decimal point ('.' oder ','') + sign e.g. display for 2000 mV input should be "-123.45" and " 0.00 " for 1000 mV Format String: "2000=-123.45;1000=0" | $\begin{gathered} 0 \\ =0.00 \\ 5000 \\ =5.00 \end{gathered}$ |
| Send user value | ESC | v | S | ch |  |  |  |  | This will send current voltage as formated string for channel ch=1..2 to sendbuffer |  |
| Display on terminal Display user value |  |  | T | $\begin{aligned} & \text { ch } \\ & \text { ch } \end{aligned}$ |  | yy1 |  |  | Show formated string of channel ch=1.. 2 on termial window Show formated string of channel ch=1..2 at coordinate $\mathrm{xx} 1, \mathrm{yy} 1$ |  |

| EA eDIPTFT43-A: Commands for backlight, I/O-port and misc |  |  |  |  |  |  |  |  | after reset |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Command | Codes |  |  |  |  |  |  |  |  |

| Illumination brightness | ESC | Y | H | n1 |  |  |  | Set brightness of the LED illumination $\mathrm{n} 1=0$ to $100 \%$. | 100 |
| Increase brightness |  |  | N |  |  |  |  | Increase brightness of the LED illumination (one step=1\%) |  |
| Decrease brightness |  |  | P |  |  |  |  | Decrease brightness of the LED illumination (one step=1\%) |  |
| Brightness changetime |  |  | Z | n1 |  |  |  | Time $\mathrm{n} 1=0 . .31$ in $1 / 10$ sec for changing brightness from 0 to 100\% | 5 |
| Illumination on/off |  |  | L | n1 |  |  |  | LED $\mathrm{n} 1=0$ : OFF; $\mathrm{n} 1=1$ : ON; $\mathrm{n} 1=2$ to 255: LED switched ON for $\mathrm{n} 1 / 10$ sec | 1 |
| Assign bar with backlight |  |  | B | no |  |  |  | Assign bar no=1.. 20 for changing brightness of the backlight | 1 |
| Asign instrument with backlight (since V1.4) |  |  | + | n1 |  |  |  | Brightness is connected to instrument 1..4. | 1 |
| Save parameter |  |  | @ |  |  |  |  | Save the actual brightness and changetime for poweron to EEPROM |  |
| Port commands |  |  |  |  |  |  |  |  |  |
| Write output port | ESC | Y | W | n1 | n2 |  |  | $\mathrm{n} 1=0$ : Set all 8 output ports in accordance with n 2 (=8-bit binary value) $\mathrm{n} 1=1 . .8$ : Reset output port n 1 ( $\mathrm{n} 2=0$ ); set ( $\mathrm{n} 2=1$ ); invert ( $\mathrm{n} 2=2$ ) | $\begin{aligned} & \text { Ports } \\ & 1-8=0 \\ & \hline \end{aligned}$ |
| Read input port |  |  | R | n1 |  |  |  | $\mathrm{n} 1=0$ : Read all 8 input ports as 8 -bit binary value (to sendbuffer) $\mathrm{n} 1=1 . .8$ : Read input port <n1> ( $1=\mathrm{H}$-level $=5 \mathrm{~V}, 0=\mathrm{L}$-level $=0 \mathrm{~V}$ ) |  |
| Port scan on/off |  |  | A | n1 |  |  |  | The automatic scan of the input port is $\mathrm{n} 1=0$ : deactivated; $\mathrm{n} 1=1$ : activated | 1 |
| Invert input port |  |  | 1 | n1 |  |  |  | The input port is $\mathrm{n} 1=0$ : normal; $\mathrm{n} 1=1$ : evaluated inverted | 0 |
| Matrix keyboard |  |  | M | n1 | n2 | n3 |  | Specifies an external matrix keyboard at the inputs and outputs. <br> n1=number of inputs ( $1 . .8$ ); n2=number of outputs ( $0 . .8$ ); n3=debouncing ( $0 . .7$ ) | 0 |
| Redefine input bitmacro (since V1.1) | ESC | Y | D | n1 | n2 | n3 |  | input port $\mathrm{n} 1=1 . .8$ is assigned by falling edge $\mathrm{n} 2=0$ to new BitMacro number $\mathrm{n} 3=0 . .255$ input port $\mathrm{n} 1=1 . .8$ is assigned by rising edge $\mathrm{n} 2=1$ to new BitMacro number $\mathrm{n} 3=0 . .255$ |  |
| Redefine matrixmacro for keys (since V1.1) |  |  | X | n1 | n2 |  |  | Assign keynumber $n 1=1 . .65$ with matrixmacro number n2=0.. 255 After release the key $\mathrm{n} 1=0$ run matrixmacro number $\mathrm{n} 2=0 . .255$ |  |
| Extended outputs <br> (since V1.4) | ESC | Y | E | n1 | n2 | n3 |  | Set the outputs of the external 74 HC 4094 (refer to page 8 ) from port $\mathrm{n} 1=0 . .255$ to port $\mathrm{n} 2=0 . .25$ n3=0: low; n3=1: high; n3=2: invert; |  |
| Other commands |  |  |  |  |  |  |  |  |  |
| Define color | ESC | F | P | no | R5 | G6 | B5 | Set a new RGB value for color no. n1=1..32 (R5:Bit7..3; G6:Bit7..2; B5:Bit7..3) |  |
| Wait (pause) <br> Set RS485 address | ESC | X | n1 | adr |  |  |  | Wait n 1 tenths of a second before the next command is executed. <br> For RS232/RS485 operation only and only possible when Hardware address is 0 . The eDIP is assigned a new address adr (in the Power-On macro). |  |
| String table code <br> Tone on/off | EsC | S Y | T | $\begin{aligned} & \text { n1 } \\ & \text { n1 } \end{aligned}$ |  |  |  | $\mathrm{n} 1=0$ : no use of internal strings <br> $\mathrm{n} 1>0$ : after code n 1 appears following codes are internal string numbers (since V1.5) The tone output (pin 16) becomes $\mathrm{n} 1=0: \mathrm{OFF} ; \mathrm{n} 1=1: \mathrm{ON} ; \mathrm{n} 1=2$ to $255: \mathrm{ON}$ for $\mathrm{n} 1 / 10$ s | $\begin{gathered} 0 \\ \text { OFF } \end{gathered}$ |
| Send bytes | ESC | S | B | num |  | data |  | num ( $=1$ to 255 ) bytes are sent to the sendbuffer data... = num Bytes. <br> In the source text of the macro programming, the number num must not be specified. This is counted by the ediptfcompiler and entered. |  |
| Send version |  |  | V |  |  |  |  | The version is sent as a string to sendbuffer e.g. "EA eDIPTFT43-A V1.0 Rev.A TP+" |  |
| Send projectname Send internal infos |  |  | 1 |  |  |  |  | The macro-projectname is sent as a string to the sendbuffer e.g. "init / delivery state" Internal information about the edip is sent to the sendbuffer. |  |

## TOUCH PANEL

The Version EA eDIPTFT43-ATP is shipped with an analog, resistive touch panel, the version EA eDIPTFT43-ATC with a capacitive touch panel. Up to 60 touch areas (keys, switches, menus, bar graph inputs) can be defined simultaneously. The fields can be defined with pixel accuracy. The display supports user-friendly commands. When the touch "keys" are touched, they can be automatically inverted and an external tone can sound (pin 16), indicating they have been touched. The predefined return code of the "key" is transmitted via the interface, or an internal touch macro with the number of the return code is started instead.

| Label zoom factor |  |  | Z | n1 | n2 |  |  |  | $\mathrm{n} 1=\mathrm{X}$-zoom factor ( 1 x to 8x); $\mathrm{n} 2=\mathrm{Y}$-zoom factor ( 1 x to 8x) |  |  |  | 1,1 |
| Additional width/height |  |  | Y | n1 | n2 |  |  |  | $\mathrm{n} 1=0 . .15$ : additional width left/right; $\mathrm{n} 2=0 . .15$ : additional height top/bottom |  |  |  | 0,0 |
| Label angle |  |  | W | n1 |  |  |  |  | Label output angle: $\mathrm{n} 1=0$ : $0^{\circ} ; \mathrm{n} 1=1: 90^{\circ} ; \mathrm{n} 1=2: 180^{\circ} ; \mathrm{n} 1=3: 270^{\circ}$ |  |  |  | 0 |
| Offset for selected label |  |  | 0 | n1 | n2 |  |  |  | $\mathrm{n} 1=\mathrm{X}$-offset; $\mathrm{n} 2=\mathrm{Y}$-offset; $\mathrm{n} 1, \mathrm{n} 2=0 . .7$ (add +8 for negative direction) |  |  |  | 0, 0 |
| Define touch areas |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Define touch key | ESC | A | T | xx1 <br> xx1 | yy1 <br> yy1 | xx2 <br> dow <br> Cod | yy2 <br> up | dow <br> Cod <br> text | up Cod nut |  |  | 'T': The area from $\mathrm{xx} 1, \mathrm{yy} 1$ to $\mathrm{xx} 2, \mathrm{yy} 2$ is defined as a key <br> 'K': The area from xx 1 ,yy1 to xx 2 ,yy2 is defined as a switch <br> ' U ': The actual button is loaded to $\mathrm{xx} 1, \mathrm{yy} 2$ and defined as a key <br> ' $J$ ': The actual button is loaded to $\mathrm{xx} 1, \mathrm{yy} 2$ and defined as a switch 'down code':(1-255) return/touchmacro when key pressed. <br> 'up code': (1-255) return/touchmacro when key released. <br> (down/up code $=0$ press/release not reported). <br> 'text': this is a string that is placed in the key with the current touch font. The first character determines the alignment of the text ( $\mathrm{C}=$ centered, $\mathrm{L}=$ left justified, R=right justified). Multiline texts are separated with the character '\|' (\$7C, dec: 124); <br> optional: after the character ' $\sim$ ' (\$7E, dec: 126) you can write a 2nd text for a selected touch key/switch e.g. "LED\|on~LED|off" <br> 'nul': (\$00) = end of string |  |
| Define touch switch (status of the switch toggles after each contact) | ESC | A | K | xx1 | yy1 | $\begin{array}{\|l\|} \hline \text { xx2 } \\ \hline \text { dow } \\ \text { Cod } \\ \hline \end{array}$ | $\begin{gathered} \text { yy2 } \\ \hline \begin{array}{c} \text { up } \\ \text { Cod } \end{array} \\ \hline \end{gathered}$ | dow Cod text | up <br> Cod <br> NUL | text | NUL |  |  |
| Define drawing area | ESC | A | D | xx1 | yy1 | xx2 | yy2 | n1 | fg | A drawing area is defined. You can then draw with a line width of n 1 and color fg within the corner coordinates $\mathrm{xx} 1, \mathrm{yy} 1$ and $\mathrm{xx} 2, \mathrm{yy} 2$. |  |  |  |
| Define free touch area | ESC | A | H | xx1 | yy1 | xx2 | yy2 |  | A freely usable touch area is defined. Touch actions (down, up and drag) within the corner coordinates $\mathrm{xx} 1, \mathrm{yy} 1$ and $\mathrm{xx} 2, \mathrm{yy} 2$ are sent. |  |  |  |  |
| Set bar by touch | ESC | A | B | n1 |  |  |  |  | The bargraph with number n 1 is defined for input by touch panel. |  |  |  |  |
| Set instrument by touch (since V1.4) | ESC | A | + | n1 |  |  |  |  | The instrument with number n 1 is defined for input by touch panel. |  |  |  |  |
| Global settings |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Touch query on/off | ESC | A | A | n1 |  |  |  |  | Touch query is deactivated ( $\mathrm{n} 1=0$ ) or activated ( $\mathrm{n} 1=1$ ) |  |  |  | 1 |
| Touch key response | ESC | A |  | $\begin{aligned} & \hline \mathrm{n} 1 \\ & \mathrm{n} 1 \\ & \hline \end{aligned}$ |  |  |  |  | Automatic inversion when touch key touched: $\mathrm{n} 1=0=\mathrm{OFF} ; \mathrm{n} 1=1=\mathrm{ON}$; Tone sounds briefly when a touch key is touched: $\mathrm{n} 1=0=\mathrm{OFF} ; \mathrm{n} 1=1=\mathrm{ON}$ |  |  |  | $\begin{aligned} & \hline 1 \\ & 1 \\ & \hline \end{aligned}$ |
| Send bar value on/off | ESC | A | Q | n1 |  |  |  |  | Automatic transmission of a new bar graph / instrument value by touch input is $n 1=0$ : deactivated; $\mathrm{n} 1=1$ : is placed in the sendbuffer once at the end of input $\mathrm{n} 1=2$ : changes are placed continious in the sendbuffer during input |  |  |  | 1 |
|  |  |  |  |  |  |  |  |  | Other functions |  |  |  |  |
| Invert touch key | ESC | A | N | code |  |  |  |  | The tor | ouch k | key with | with the assigned return code is inverted manually |  |
| Set touch switch |  |  | P | code | n1 |  |  |  | The s | status | of the | switch is changed by means of a command ( $\mathrm{n} 1=0=\mathrm{off;} \mathrm{n} 1=1=\mathrm{on}$ ) |  |
| Query touch switch |  |  | X | code |  |  |  |  | The s | status | of the | switch with the return code (off=0; on=1) is placed in the sendbuffer |  |
| Query radio group |  |  | G | n1 |  |  |  |  | down | code | of the | activated switch from the radio group n 1 is placed in the sendbuffer |  |
| Delete touch area | ESC | A | L | code | n1 |  |  |  | The touch area with the return code (code $=0$ : all touch areas) is removed from the touch query. $\mathrm{n} 1=0$ the area remains visible on the display; $\mathrm{n} 1=1$, the area is deleted. |  |  |  |  |
|  |  |  | V | xx1 | yy1 | n1 |  |  | remove the Touch area that includes the coordinates $\mathrm{xx} 1, \mathrm{yy} 1$ from the touch query. $n 1=0$ : area remains visible; $n 1=1$ : Delete area |  |  |  |  |

## TOUCH ADJUSTMENT (ONLY VALID FOR RESESTIVE TOUCH EA EDIPTFT43-ATP)

The touch panel is perfectly adjusted and immediately ready for operation on delivery. As a result of aging and wear, it may become necessary to readjust the touch panel:
1a. Send Command 'ESC A@' or
1b. Touch the touch panel at power-on and keep it depressed. After the message "touch adjustment ?" appears, release the touch panel. Touch the touch panel again within a second for at least a second.
2. Follow the instructions for adjustment (press the 2 points upper left and lower right).

## RESPONSE OF THE EA eDIPTFT43-A VIA SERIAL INTERFACE

The table below contains all response codes. Some response data will come automatically some others on request. In addition to that with command 'ESC SB ...' user is able to transmit individual data packages. All reponses are placed into the sendbuffer. With the smallprotocol command 'Request for content of send buffer' (see page10) the host can read out the sendbuffer. This can be done per polling, alternativly pin 20 'SBUF' shows with LO-signal that data is ready to transmit.

## PRELOADED FONTS

As standard，there are 3 monospaced， 3 proportional character sets and 2 large digit fonts integrated． The proportional character sets（which have a narrow＂l＂and a wide＂W＂，for example）look better and take up less space on the screen．Each character can be placed with pixel accuracy，and its height and width can be increased by a factor of 1 to 8 ．A text can be output left justified，right justified or centered．Rotation in $90^{\circ}$ steps is possible．Macro programming permits further fonts to be integrated．
All kinds of fonts can be converted from True－Type Fonts by using using the LCD toolkit／ eDIPTFTcompiler（the USB Evaluation Board EA 9777－2USB is required）．

Font 5: CHICAGO14 proportional

Font 6: Swiss30 Bold proportional

This hard copy shows all the fonts with which the product is shipped

## Additional Fonts

Up to 256 fonts á 16 pages can be loaded into the internal DataFlash.

## COMPILER OPTION "WinFont:"

It is possible to raster TrueType-Fonts in different sizes witch can be used. A double-click to the fontname within the KitEditor opens the font selection box.
To simplify the use of fonts, there is the possibilty of a edit box. If you output a string with KitEditor (e.g. \#ZL 5,5, "Hello"), you can perform a double click on the string to open it. Now you can select the desired characters. This is mainly recommended
 using cyrillic, asian or symbol fonts.
In that way, the KitEditor automatically places the right ASCII-Code. Alternativly you can use instead of the quotation mark curly brackets (e.g. +ZL 5,5, \{48656C6C6F\}).

## COMPILER OPTION "Font:"

Following font formats can be used:

- FXT: Textfont as used by eDIP240/320 and KIT series
- G16: internal eDIPTFT format (with this format it is possible to user color fonts)

## 65,536 COLORS

EA eDIPTFT32-A is able to work with 65,536 colors for true-color pictures/icons and animations. For an easy use there exists a color palette with 32 entrys ( 16 colors are predefined after PowerOn). This color palette can be redefined at any time without

| Color | $\mathbf{R}$ | $\mathbf{G}$ | $\mathbf{B}$ |
| :---: | :---: | :---: | :---: |
| 1 | 0 | 0 | 0 |
| 2 | 0 | 0 | 255 |
| 3 | 255 | 0 | 0 |
| 4 | 0 | 255 | 0 |
| 5 | 255 | 0 | 255 |
| 6 | 0 | 255 | 255 |
| 7 | 255 | 255 | 0 |
| 8 | 255 | 255 | 255 |
| 9 | 111 | 111 | 111 |
| 10 | 255 | 143 | 0 |
| 11 | 143 | 0 | 255 |
| 12 | 255 | 0 | 143 |
| 13 | 0 | 255 | 143 |
| 14 | 143 | 255 | 0 |
| 15 | 0 | 143 | 255 |
| 16 | 175 | 175 | 175 | changing the content of the display (command: ESC FP no R G B). To use a color for text and graphic functions you set only a number between $1 . .32$. and transparent foreground The dummy color number 255 means that the actually color is not changed e.g you want only to change the foreground- and not the background color. The color number $0=$ transparent is special and can be used for background of character e.g. that means that for placing a character no rectangular field will be deleted around the character itself. The sensless combination of transparent background is used to invert all dots (=complementary). Two times inverted will end same as action was started (original drawing is restored).

some examples to show the letter 'A' onto a fixed background

## BORDERS, KEY STYLES AND BARGRAPH

The eDIP is shipped with 20 predefined border (no:1..20) for the
 commands draw box frame and draw touchkeys. There are also three special borders in various colors for using with bargraph commands (no:101..107, 111..117 and 121..127). All of them can be used in various sizes via coordinates. The frames $1 . .20$ are split into 3 segments: the outer frame, inner frame and filling. Each segment will get an individual colour for normal and for selected state. This will give the user the opportunity, when touching a field, the individual part of the key will be inverted only.

## FILL PATTERNS

A pattern type can be set as a parameter with various commands. In this way, for example, rectangular areas and bar graphs can be filled with different patterns. The eDIP is shipped with 20 predefined fill patterns.
Define own pattern:
With the LCD-tools it is possible to define new pattern (=bitmaps with exactly $8 \times 8$ dots).(Compileroption "Pattern:"). The foregroundand backgound color can be set for monochrome pattern (as the
 20 preloaded pattern) incl. transparency. It is also possible to define full colored pattern. With the LCD-tools some sample pattern has been installed (see folder 'Pattern').

[^0]
## DEFINE OWN BORDER

With the LCD-tools it is possible to define new borders (Compileroption "Border:"). Each of these new border is a bitmap with exactly $24 x 24$ dots ( 9 segments with $8 x 8$ dots: $4 x$ edge, $4 x$ middle part, $1 x$ filling).

Scaling for bigger touchkeys/ frames will be done by repetition of these $8 \times 8$ dot segments. This makes it necessary to keep the $8 \times 8$ size in every case. If 4 -color bitmaps are used (as the preloaded border 1..20) the color can be set individually (the first color is always transparent and is not used by the eDIP). It is also

border25: 50x56 Dot size possible to define full colored border (as the preloaded border for bargraphs 101...127).With the LCD-tools some sample border has been installed (see folder 'Bitmaps\ColorlBorder').

ROTARY AND POINTER INSTRUMENTS (SINCE V. 1.4)
With the help of the LCD-Tools it is possible to include instruments (Compiler command: Instrument: 4, <instrument.i16>). Performing a double click in the KitEditor on the instrument file opens the instrument editor.
The instruments are supported by convinient commands ('ESC I..'). For example the instruments are connectable to an analog input. In addition they are configurable by touch.

ELzetionic

## Some instrument examples

## BUTTONS AS KEYS

Apart from the border types, which are infinitely scalable, it is also possible to use bitmaps as touch keys or touch switches (Compilerotion "Button:").
A button always consists of two Bitmaps of equal size (one bitmap to display the touch key in its normal state and another for when it is pressed).
The active area of the touch key automatically results from the size of the button bitmaps.

RadioBlack75x15_0.bmp RadioBlack75x15_1.bmp

## SWITCHES IN GROUPS (RADIO GROUPS)

Touch switches change their status from ON to OFF or vice versa each time they are touched. Several touch switches can be included in a group ('ESC A R n1' command). If a touch switch in the group ' $n 1$ ' is switched on, all the other touch switches in this group are automatically switched off. Only one switch is ever on (see table on page 16).

two radio groups with touch switches

## CREATING INDIVIDUAL MACROS AND IMAGES

To create your own fonts, images, animations and macros you need the following:

- To connect the display to the PC, you need the EA 9777-2USB USB programmer, which is available as an accessory, or a self-built adapter with a MAX232 level converter (see the application example on p.5).
- ELECTRONIC ASSEMBLY LCD-Tools*), which contains a kiteditor, bitmapeditor, ediptftcompiler, fonts, images, border, pattern and examples (for Windows PCs)
- A PC with an USB or serial COM interface

To define a sequence of commands as a macro, all the commands are written to a file on the PC (e.g. DEMO.KMC). You specify which character sets are to be integrated and which command sequences are to be in which macros.
If the macros are defined using the kit editor, you start the eDIPTFT compiler using F5. This creates a file called DEMO.DF. If an EA 9777-2USB programmer is also connected or the display is connected to the PC via a MAX232, this file is automatically burned in the display's data flash memory.

You can send the created macrofile *.DF with any other system to the EA eDIPTFT43-A. All programming commands are inside this file, so you only need to send the content of the *.df file (via RS232, SPI or I2C with smallprotocol in packets) to the EA eDIPTFT43-A.

## KIT-EDITOR HELP (ELECTRONIC ASSEMBLY LCD TOOLS)

At bottom from the KitEditor window in the statusline you can see a short description for the current command and the parameters. For more information press F1.

## Images

To save transfer time via serial interface, it is possible to store up to 256 bitmaps á 16 pages into internal dataflash (Compileroption "Picture:").
Following image file-formats can be used:

- BMP: Windows Bitmap with 1-, 4-, 8-, 16-, 24-, 32-BIT colordepth incl. RLE.
- GIF: Graphics Interchange Format incl. optionally transparency
- JPG: JPEG Compressed Images
- TGA: TARGA Images with 8-, 16-, 24-, 32-BIT colordepth incl. RLE and transparency.
- PNG: Portable Network Graphics incl. colour map, gray scale and transparency
- G16: internal eDIPTFT format, incl. RLE and transparency

All pictures are converted into internal G16 format with RLE encoding (saves memory).
Too big pictures are resized proportional (Compileroption "MaxSize:").
It is also possible to reduce the colordepth (Compileroption "MaxColorDepth:").
One color can be defined as transparent (Compileroption "MakeTransparent:")
The internal pictures can be used with the command "ESC U I" via serial interface or from a macro.
The foreground- and backgound color can be set for monochrome pictures incl. transparency.
Animation
It is possible to store up to 256 animations á 16 pages into internal dataflash.
(Compileroption "Animation:").
Following image file-formats can be used:

- GIF: animated GIF (only identically transparent areas, transparency can be switched off).
- G16: internal animated eDIPTFT format
- two or more single bitmaps (BMP, GIF, JPG, TGA, PNG, G16) e.g. two bitmaps for blinking

Note that max. 4 animations (animationprocesses) can run at the same time . The animations are self-running pictures, but you can use the animations manually too.
The foreground- and backgound color can be set for monochrome animations.

## Pattern

Patterns are used to fill a box, a bargraph or to draw a line. It is possible to store up to 256 pattern á 16 pages into internal dataflash (Compileroption "Pattern:").
Each bitmap (BMP, GIF, JPG, TGA, PNG, G16) with a size of $8 \times 8$ dots can be imported as a pattern. The foreground- and backgound color can be set for monochrome pattern incl. transparency.
Border / Bargraph
A border can be scaled and is used for rectangles, bargraphs and touch keys/switches. It is possible to store up to 256 border á 16 pages into internal dataflash (Compileroption "Border:")
Each bitmap (BMP, GIF, JPG, TGA, PNG, G16) with a size of $24 \times 24$ dots can be imported as a border.
The transparency of GIF,TGA and G16 bitmaps is used by the EA eDIP.
It is possible to change the colors for 4-color borders, the first color ist always transparent and is not used by the EA eDIP. When used for a touch key/switch a second border can be loaded witch will be used if the touch key/ switch is pressed.
Images for Touch keys (Buttons)
It is possible to store up to 256 touchkeys/buttons á 16 pages into internal dataflash.
(Compileroption "Button:").
A button consists of one or two images with the same size (BMP, GIF, JPG, TGA, PNG, G16).
The transparency of GIF,TGA, PNG and G16 bitmaps is used by the EA eDIP and should be identical.
The first bitmap is used when the touch key/switch is released and the second bitmap is used if the touch key/ switch is pressed.

## MACROS

Single or multiple command sequences can be grouped together in macros and stored in the data flash memory. You can then start them by using the Run macro commands. There are different types of macro (compiler directive marked in green letters):

Normal macros Macro:
These are started by means of an 'ESC MN xx' command via the serial interface or from another macro. A series of macros occurring one after the other can be called cyclically (movie, hourglass, multi-page help text). These automatic macros continue to be processed until either a command is received via the interface or a touch macro with a corresponding return code is activated.
Touch macros (1 to 255) TouchMacro:
Started when you touch/release a touch field (only in versions with a touch panel - TP /TC) or issue an 'ESC MT xx' command.
Bit macros BitMacro:
will be started by a single line IN $1 . .8$ (bit) will change or by command 'ESC MB xx'.
Bit- Macro $1 . .8$ are good for falling edge and Bit Macro 9.116 are good for rising edge at input 1..8. It is possible to change the assignment between Bitmacro and intput with command 'ESC YD n1 n2 n3' (since firmware V1.1, see page 17).

## Port macros PortMacro:

These are started when voltage (binary) is applied to IN $1 . .8$ or by command 'ESC MP xx'.
Matrix macros MatrixMacro:
Matrix Macro 1..64: start when keypressed or by command 'ESC MX xx'.
Matrix Macro 0: start after release of key or by command.
It is possible to change the assignment between keynumber and Matrixmacro with command 'ESC YX n1 n2 n3' (since firmware V1.1, see page 17)
Analogue Macros AnalogMacro:
will start whenever voltage changes or limit exceeds or by command 'ESC MV xx'. See table at the right: It is possible to change the assignment between analoguemacrofunction and Analoguemacronumber with command 'ESC VM n1 n2' (since firmware V1.1, see page 15) Process macros ProcessMacro:
automatic start at fixed periode ( 0.1 s up to 25 s) or by command 'ESC MC xx'. Up to 4 individual process may be defined by command 'ESC MD ..'. These Process Makro will never be stopped by other commands or activities.

| Analogue Macro |  |  |
| :---: | :---: | :--- |
| Macro No. | Macro starts at |  |
| AIN1 | AIN2 |  |
| 0 | 10 | every change of input voltage |
| 1 | 11 | falling input voltage |
| 2 | 12 | rising input voltage |
| 3 | 13 | below lower limit |
| 4 | 14 | above lower limit |
| 5 | 15 | below upper limit |
| 6 | 16 | above upper limit |
| 7 | 17 | outside of both limits |
| 8 | 18 | inside of both limits |
| 9 | 19 | lower than other channel |

## Power-on macro PowerOnMacro:

Started after power-on. You can switch off the cursor and define an opening screen, for example.
Reset macro ResetMacro:
Started after an external reset (low level at pin 5).
Watchdog macro WatchdogMacro:
Started after a fault/error (e.g. failure).
Brown-out macro BrownoutMacro:
Started after a voltage drop under 4.6V.

Important: If a continuous loop is programmed in a power-on, reset, watchdog or brown-out macro, the display can no longer be addressed. In this case, the execution of the power-on macro must be suppressed. You do this by wiring DPOM:

- PowerOff - connect pin 13 (DPOM) to GND
- PowerOn - open pin 13 (DPOM) again.

## MACRO PAGES (MULTILINGUAL CAPABILITY)

There are 16 complete macro sets available as well as the internal images and fonts. By simply switching the active macro page (ESC M K n1), for example, up to 16 different languages can thus be supported.
If a macro/picture is defined in the kit editor, a page number can be specified in square brackets after the macro/picture number.
If a macro/image is not defined in the currently set page [1] to [15], this macro/picture is automatically taken from page [0]. Thus, not all macros and images have to be stored separately for each language when they are identical in each language.

```
PICTURE: 100[0] <BIER.BMP>
PICTURE: 100[1] <BEER.BMP>
PICTURE: 100[2] <BIRRA.BMP>
MACRO: 2[0]
        SAME AS "MACRO: 2"
    #FZ 3,1
    #ZL 25,0 "DEUTSCH "
    #UI 0,20, 100
MACRO: 2[1] ; ENGLISH
    #FZ 3,1
    #ZL 25,0 "ENGLISH "
    #UI 0,20, 100
MACRO: 2[2] ; ITALIAN
    #FZ 3,1
    #ZL 25,0 "ITALIAN "
    #UI 0,20, 100
```

If there is only the need of handling strings differently, stringtables might be used. Depending on the active macropage (ESC M K n1) the desired string is called. Please check the following example:

```
STRINGCODE=$01
STRING: 100[0] "HALLO WELT
STRING: 100[1] "HELLO WORLD "
STRING: 100[2] "CIAO A TUTTI "
MACRO: 1
    #ST StringCode
    #ZL 10,5, StringCode, 100
```

## WRITE PROTECTION FOR MACRO PROGRAMMING AND FONTS

A LO level at pin 19 (WP) prevents the macros, images and fonts in the data flash memory from being overwritten inadvertently (so it is highly recommended!).

## SPECIFICATION AND CHARACTERISTICS

| Characteristics |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Value | Condition | min. | typ. | max. | Unit |
| Operating Temperature |  | -20 |  | +70 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature |  | -30 |  | +80 | ${ }^{\circ} \mathrm{C}$ |
| Storage Humidity | $<40^{\circ} \mathrm{C}$ |  |  | 90 | $\% \mathrm{RH}$ |
| Operating Voltage |  | 4.9 | 5.0 | 5.1 | V |
| Input Low Voltage |  | -0.5 |  | $0.3^{\star} \mathrm{VDD}$ | V |
| Input High Voltage | Pin Reset only | $0.9^{*} \mathrm{VDD}$ |  | $\mathrm{VDD}+0.5$ | V |
| Input High Voltage | except Reset | $0.6^{\star} \mathrm{VDD}$ |  | $\mathrm{VDD}+0.5$ | V |
| Input Leakage Current | Pin MOSI only |  |  | 1 | uA |
| Input Pull-up Resistor |  | 20 |  | 50 | kOhms |
| Output Low Voltage |  |  |  | 0.7 | V |
| Output High Voltage |  | 4.2 |  |  | V |
| Brightness (white) | w./o. Touch |  | 500 |  | $\mathrm{~cd} / \mathrm{m}^{2}$ |
|  | with Touch |  | 410 |  | $\mathrm{~cd} / \mathrm{m}^{2}$ |
| Output Current |  |  |  | 20 | mA |
| Power Supply | Backlight 100\% |  | 180 |  | mA |
|  | Backlight off |  | 80 |  | mA |

MOUNTING BEZEL EA 0FP481-43SW

## NOTES ON HANDLING AND OPERATION

- The module can be destroyed by polarity reversal or overvoltage of the power supply; overvoltage, reverse polarity or static discharge at the inputs; or short-circuiting of the outputs.
- It is essential that the power supply is switched off before the module is disconnected. All inputs must also be deenergized.
- The display and touch screen are made of plastic and must not come into contact with hard objects. The surfaces can be cleaned using a soft cloth without solvents.
- The module is designed exclusively for use in buildings. Additional measures have to be taken if it is to be used outdoors. The maximum temperature range of -20 to $+70^{\circ} \mathrm{C}$ must not be exceeded. If used in a damp environment, the module may malfunction or fail. The display must be protected from direct sunshine.
- TFT displays may show residual or "ghost" image of the previous image when screen image is changed after a long periode only. To prevent such effect it is necessary to alternate the display content.
- Dot error are allowed following ISO13406-2 class II.

handling precautions!
