## DOG SERIES 3.3V

INCL. CONTROLLER ST7036 FOR 4-/8-BIT, SPI (4-WIRE)

## TECHNICAL DATA

* HIGH-CONTRAST LCD SUPERTWIST DISPLAY
* OPTIONAL LED BACKLIGHT UNITS IN DIFFERENT COLORS
* 1x8, 2x16 AND 3x16 WITH $12.0 \mathrm{~mm} / 5.6 \mathrm{~mm}$ AND 3.6 mm CHARACTER HEIGHT
* ST 7036 CONTROLLER FOR 4-BIT, 8-BIT AND SPI (4-WIRE) INTERFACE
* POWER SUPPLY +3.3V OR +5V SINGLE SUPPLY (typically 250 $\mu \mathrm{A}$ )
* NO ADDITIONAL VOLTAGES REQUIRED
* OPERATING TEMPERATURE RANGE -20 THROUGH $+70^{\circ} \mathrm{C}$
* LED BACKLIGHT 3 through $80 \mathrm{~mA} @ 3.3 \mathrm{~V}$ or 2 through $40 \mathrm{~mA} @ 5 \mathrm{~V}$
* NO MOUNTING REQUIRED, SIMPLY SOLDER INTO PCB

## ORDERING CODE

LCD MODULE 1x8-11.97mm
EA DOGM081x-A
LCD MODULE $2 \times 16-5.57 \mathrm{~mm}$
EA DOGM162x-A
LCD MODULE 3x16-3.65mm
EA DOGM163x-A
$\boldsymbol{x}: \boldsymbol{B}=$ blue background
$\boldsymbol{E}=$ yellow/green background

$\boldsymbol{S}=$ black background
W = white background
LED BACKLIGHT, WHITE
EA LED55X31-W
LED BACKLIGHT, YELLOW/GREEN
EA LED55X31-G
LED BACKLIGHT, BLUE
EA LED55X31-B
LED BACKLIGHT, RED
EA LED55X31-R
LED BACKLIGHT, AMBER
EA LED55X31-A
EA LED55X31-RGB
LED BACKLIGHT, FULL COLOR RGB

## EA DOG SERIES

With its EA DOG series, ELECTRONIC ASSEMBLY presents the world's first display series which will run on 3.3 V systems without auxiliary power. They can, of course be used on traditional 5 V systems.
Unlike normal LCD modules, you order the display and the corresponding backlight separately. This gives you a wealth of possible combinations.
Designed for compact hand-held devices, this modern LCD range provides a number of real benefits with or without backlight:

* extremely compact at $55 \times 31 \mathrm{~mm}$ at the standard font size of $5.57 \mathrm{~mm}(2 \times 16)$
* ultra-flat at 2.0 mm without backlight or 5.8 mm including LED backlight
* 4-bit, 8-bit and SPI interface (4-wire)
* typical power consumption of only $250 \mu \mathrm{~A}$ in full operation (LED white backlight as of 3 mA )
* easy installation by simply soldering into the board
* A whole range of design variants (63) can be supplied as of single units
* Changing background color

## SETTING THE CONTRAST

The contrast on all displays of the EA DOG series can be set with a command. This is done using bits C0 through C5 in the commands "Contrast Set" and "Power/Icon Control/Contrast Set". Generally, the contrast is set once and kept constant across the entire operating temperature range (-20 through $+70^{\circ} \mathrm{C}$ ) thanks to the integrated temperature compensation function.
Even when run at 3.3 V , the displays do not require any additional negative voltage!

## LED BACKLIGHTS

6 different variants are available for individual backlighting: white, yellow/green, blue, red, amber and full color.
For monochrome backlights, 2 separate LED paths are available, which can be switched in parallel or in series to ideally match the system voltage. This means that all the backlights can be run either at 5 V or at 3.3 V .
Operation of the backlight requires an external series resistor for current limiting. This can be calculated from $\mathrm{R}=\mathrm{U} / \mathrm{I}$; you will find the values in the table. To improve life time it is recommanded to use a current source only.
The operating life of the yellow/green, red and amber backlights is 100,000 hours and that of the white and blue backlights much shorter.
Important: Never operate the backlight directly on a $5 \mathrm{~V} /$ 3.3V supply, as this can immediately destroy the LEDs!

## INSTALLATION

First, the display and the corresponding backlight are clipped together. The complete unit is then inserted into a PCB and soldered. Note that the 4 pins for the backlight must also be soldered from the top.
Important: There are one or two protective films on the display (top and/or rear side) and one on each backlight. Those have to be removed during or after production.

## 5 DIFFERENT TECHNOLOGIES

As a standard we provide 5 different technologies as STN and FSTN:

| display type | technology | optional backlight | readability | display color non backlighted | display color with backlighted | recommended backlight color |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EA DOGTdxxu-A | FSTN pos. transflective | it's fine with and without backlight | readable even without backlight | black on white | black on backlight color | white, blue, RGB |
| EA DOGTm××E-A | STN pos. yellow/green transmissive | backlight unit required | readable even without backlight | dark green on yellow/green | black on yellow/green or amber | yellow/green, amber |
| EA DUIT $\mathrm{Cx} \times \mathrm{B}-\mathrm{A}$ | STN neg. blue transmissive | usage only with backlight | --- | --- | backlight color on blue background | white, yellow/green |
| EA DOIT $\mathrm{Cx} \times \mathrm{x}=-\mathrm{A}$ | FSTN neg. transmissive | usage only with backlight | --- | --- | backlight color on black background | white, RGB |
| EA DOGId $\times x \mathrm{~L}-\mathrm{H}$ | STN pos. yellow/green reflective | no backlight possible | finest readable without backlight | dark green on yellow/green | --- | --- |

## 3 DIFFERENT DISPLAYS

These displays are available for mentioned technologies:

## 6 DIFFERENT BACKLIGHTS

6 different backlight colors are available to match equipments design as much as possible. The most effective and brightest one is the white one EA LED55x31-W.

When you can see black and white pictures only here on this page then you're able to download a coloured version from our website www.Icd-module.de//deu/pdf/doma/dog-m.pdf

## APPLICATION EXAMPLES

Different wiring must be used depending on the interface and the power supply. 2 additional capacitors are required for 3.3 V operation.
Note that the COG technology means that the current capacity of the outputs is limited. Therefore, a large load on the bus may cause signal loops and unclean levels. If in doubt, additional pull-down resistors (8051) are required or additional waits/NOPs must be incorporated.

## USB-TEST BOARD EA 9780-4USB

For easy startup, a USB test board is available that can be connected to a PC. An USB cable and a Windows software is supplied with the product. This allows individual text and to be displayed directly on the connected display.

## SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software free from our website: www.Icd-module.de/fileadmin/downloads/startdog v45.zip

## CHARACTER SET

The below show character set is already built-in. In addition to that you are able to define 8 characters by your own.

|  | moon | 0001 | 10010 | 20011 | 1000 | 1001 | To10 | [11 |  |  |  |  | 31100 |  |  |  |
