## DOGM GRAPHIC SERIES

new display design
128x64, 3.3V
available in low quantity ! mounted

EA DOGM128B-6 + EA LED55x46-W

EA DOGM128W-6 + EA LED55x46-W

EA DOGM128W-6 +
EA LED55x46-A

## TECHNICAL DATA

* HIGH-CONTRAST LCD SUPERTWIST DISPLAY (STN AND FSTN) WITH $15 \mu \mathrm{~m}$ DOT GAP
* OPTIONAL LED BACKLIGHTS IN VARIOUS COLORS
* 128x64 PIXELS (CORRESPONDS TO 8x21 CHARACTERS OR 4x10 LARGE CHARACTERS)
* ST 7565R CONTROLLER WITH SPI (4-WIRE) INTERFACE
* POWER SUPPLY: SINGLE SUPPLY 3.0V TO 3.3V (TYPICALLY 270رA)
* NO ADDITIONAL VOLTAGES REQUIRED
* OPERATING TEMPERATURE RANGE $-20^{\circ} \mathrm{C}$ TO $+70^{\circ} \mathrm{C}$ (STORAGE $-30^{\circ} \mathrm{C}$ TO $+80^{\circ} \mathrm{C}$ )
* LED BACKLIGHTING 5mA TO 40mA
* NO MOUNTING REQUIRED: SIMPLY SOLDER ONTO PCB

## ORDERING CODE

GRAPHICS DISPLAY, 128x64, 55x46mm EA DOGM128x-6
$\boldsymbol{x}: \boldsymbol{W}=$ white background (FSTN pos. transflective)
$\boldsymbol{E}=$ yellow/green background (STN pos. transmissive)
$\boldsymbol{B}=$ blue background (STN neg. transmissive)
$\boldsymbol{S}=$ black background (FSTN neg. transmissive)
$\boldsymbol{L}=$ yellow/green background (STN pos. reflective, cannot be backlit)
LED BACKLIGHT, WHITE
EA LED55X46-W
LED BACKLIGHT, YELLOW/GREEN
EA LED55X46-G
LED BACKLIGHT, BLUE
LED BACKLIGHT, RED
LED BACKLIGHT, AMBER
LED BACKLIGHT, GREEN
LED BACKLIGHT, FULL COLOR RGB

## ACCESSORIES

USB TEST BOARD FOR PC (WINDOWS)
TOUCH PANEL, 4-WIRE, ANALOG, STICK-ON
ZIF CONNECTOR FOR TOUCH PANEL, BOTTOM CONTACT SOCKET CONNECTOR 4.8 mm HEIGHT (2 PCS. REQUIRED)

EA 9780-2USB
EA TOUCH128-1
EA WF100-04S
EA FL-20P

## EA DOGM128

The EA DOGM128, a 128x64-pixel graphics display, is a new addition to ELECTRONIC ASSEMBLY's EA DOGM series. It, too, has pins that allow it to be mounted quickly and easily. 7 different optional LED backlights are available. These can be combined with 5 different display technologies, making it possible to have up to around 20 different designs. Designed for compact, handheld devices, this modern LCD series offers a number of benefits with and without backlighting:

* Extremely compact ( $55 \times 46 \mathrm{~mm}$ ) with a large viewing area of $51 \times 31 \mathrm{~mm}$
* Super-flat: 2.0 mm without backlight module, and only 5.8 mm with a b./l. module mounted
* Serial SPI interface (4-wire)
* Single supply +3.0 V or +3.3 V
* Typical power consumption of only $270 \mu \mathrm{~A}$ in full operation (white LED backlight from 5 mA )
* Easily mounted by soldering
* Wide range of design variants orderable as single units
* Backlighting color changes possible

## CONTRAST ADJUSTMENT

The contrast can be set by means of a command for all the displays in the EA DOGM series. The contrast setting of the display must be set once by the software, and is then kept constant throughout the entire operating temperature range $\left(-20 \ldots+70^{\circ} \mathrm{C}\right)$, thanks to the integrated temperature compensation.

## LED BACKLIGHT

7 different variants are available for individual backlighting: white, yellow/green, green, blue, red, amber and a full-color version.
There are 3 separate LED paths available for each monochrome backlight that can be switched in parallel or in series to suit the system voltage. This means that most backlights can be run at either 3.3 V or 5 V .
To operate the backlight, we recommend a current source (e.g. CAT4238TD) or an external series resistor to limit the current. This can be calculated from $\mathrm{R}=\mathrm{U} / \mathrm{l}$; you can find the values in the table on the right. To prolong the life of the backlights, we recommend that you use a current source.
The operating life of the yellow/green, red and amber backlights is 100,000 hours. The life of the white and blue backlights is considerably shorter. We recommend that you dim these or switch them off whenever possible.
Important: Never connect the backlight LEDs directly to a $5 \mathrm{~V} / 3.3 \mathrm{~V}$ supply as this will immediately destroy the LEDs. Always use a current source. Please note that derating

| LED backlight | Forward voltage (V) |  |  | Current max. (mA) | Limiting resistor (ohm, each path) |  |

| EA LED55x46-RGB | typ. 4V | typ. 4V | typ. 4V | 40 each colour | CAT4238 | 25 | applies at temperatures exceeding $+25^{\circ} \mathrm{C}$.

## ASSEMBLING

First, clip the display and backlight modules together by gently pushing the display pins through the corresponding holes on the backlight module. Then insert the entire module into the socket, or into the soldering holes on the pcb. The backlight pins (the 2 rows with 3 pins at the bottom) must be soldered on the top side as well to ensure good contact between the modules.
Important: The display has a protective film on the top and/or the bottom, and there is also one on the backlight. These must be removed.
Make sure that neither display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.

DOGM GRAPHIC SERIES

## 5 DIFFERENT TECHNOLOGIES

See below for an overview of available technologies, combinations with available backlights and their usability:

| display type | technology | optional backlight | readability | display color non backlighted | display color with backlighted | recommended backlight color |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ELECTRONIC ASSEMBLY <br> EA DOGM128W-6 | FSTN pos. transflective | it's fine with and without backlight | readable even without backlight | black on white | black on backlight color | white, blue, green, RGB |
| ELECTRONIC ASSEMBLY <br> Ef DOcM128E-6 | STN pos. yellow/green transmissive | backlight unit required | readable even without backlight | dark green on yellow/green | black on yellow/green or amber | yellow/green, amber |
| ELFOTRONIO ASSEM:LY <br> Ef DOGM128B-6 | STN neg. blue transmissive | usage only with backlight | --- | --- | backlight color on blue background | white, yellow/green |
| ELETRONIO ASSEMBL <br> Ef DOGM128S-6 | FSTN neg. transmissive | usage only with backlight | --- | --- | backlight color on black background | white, green, RGB |
| ELECTRONIC ASSEMBLY <br> Ef DOGM128L-6 | STN pos. yellow/green reflective | no backlight possible | finest readable without backlight | dark green on yellow/green | --- | --- |

## 6 AND MORE DIFFERENT BACKLIGHTS

6 and more different backlight colors are available to match equipments design as much as possible. The most effective and brightest one is the white one EA LED55x31-W.

## APPLICATION EXAMPLES

+3.0 V or +3.3 V (single supply) operation requires 9 external capacitors

If an external source of $+10.5 \sim+13.5 \mathrm{~V}$ (does not have to be stabilized) is available, the charge pump is not needed and less external components are required.

## USB-TEST BOARD EA 9780-2USB

For easy startup, a USB test board is available that can be connected to a PC. A USB cable and Windows software is supplied with the product. This allows text and images (BMP) to displayed directly on the connected display. You will find more information on the test board in the EA 9780-2USB data sheet.

## SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software free from our website:
http://www.Icd-module.de/deu/disk/startdog.zip

DOGM GRAPHIC SERIES

## TABLE OF PROGRAMMING COMMANDS

| Command | Command Code |  |  |  |  |  |  |  |  | Function |

## DATA TRANSFER

Data transfer is unidirectional. That means that data can only be written; it cannot be read again. In contrast to other displays, a busy query is not necessary with this display. The clock-pulse rate of the SCL line can be up to 20 MHz , depending on the supply voltage. You will find more detailed information on timing on pages 64 and 65 of the data sheet of the ST7565R controller, which you will find on our website at http://www.Icd-module.de/eng/pdf/zubehoer/st7565r.pdf

## INITIALISATION EXAMPLE

## TOUCH PANEL EA TOUCH128-1 (OPTIONAL)

An analog touch panel is available as an accessory. It has a self-adhesive material on its rear surface and is simply stuck onto the display. The connection is made by means of a 4-pin flexible cable for a ZIF connector (e.g. EA WF100-04S) with a grid of 1.0 mm . Bending radius is defined with min. 5 mm . For optimum readability we recommend that you use a backlight with the display.
Interfacing to a processor can be either done by an external touch panel controller or with a controller that is featured with analogue input. The touch panel is similar to a potentiometer:
 connecting a voltage of e.g. 3.3V to the pins Top-Bottom makes it possible to read out a voltage on pin Left or Right which is linear to the Y -coordinate of the pressed point. The X-coordinate will result when the voltage will be supplied to Left-Right and measurement is done at Top or Bottom. The pinout of the connecting cable is shown in the drawing.

| Specification |  |  |  |
| :--- | :---: | :---: | :---: |
| Specification | min | max | Unit |
| Top-Bottom | 120 | 300 | $\Omega$ |

| Stor. Temperatur | -20 | +70 | ${ }^{\circ} \mathrm{C}$ |
| Transmission | 75 | 85 | $\%$ |
| Life Time | 10000 |  | Cycles |

## ZIF CONNECTOR EA WF100-04S

As an accessory for the touch panel we do provide a ZIF connector (4 pins) with pitch 1.0 mm (SMD type). This connector „bottom side contact" type.

## Note:

- LC displays are generally not suited for wave or reflow soldering. Temperatures of over $80^{\circ} \mathrm{C}$ can cause lasting damage.
- The surfaces of the displays and backlights are protected from scratching by self-adhesive protective foils. Please remove these before mounting ( 2 pcs. on display and 1 pc. on backlight).
- Make sure that either display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.

## DIMENSIONS EA LED55X46

Note:
The 6(4) LED pins A1 to A3 and C1 to C3 also have to be soldered from above to ensure good contact.
