PATENTED TECHNIQUE

SCREW EATER

Vertical Serrations (PAT.)

You can remove damaged screws in seconds. Just grip and turn!

Inter-meshed Teeth (PAT.)

Need to hold a thin material? Get a firm grip!

Ordinary plier jaws are lined with horizontal serrations. When you grasp and turn a screw head with ordinary pliers, the jaws slip and the screw remains stuck.

How does it work?

Specially-designed jaws generate gripping power

friction with no slippage.

How to select the proper dies for crimping an open-barrel contact

1. Measure the width of conductor barrel with a caliper while both barrel wings are in parallel.

Measure the width

2. Select the die width which is close to the width of barrel wings measured.

For example: 1.5mm measured → Select 1.6mm dies.

ZC-28 **RUST REMOVER**

Amazing - How quickly it cleans rust off!

- Since it is a neutral liquid, you can work safely (it does not contain acid or alkali).
- Rust on small components, such as rusted screws, can be removed in seconds.
- No need to scrub.

How it works on rusty screws

1. Penetration

The liquid penetrates through small gaps and reaches the screw's thread in seconds!

2. Rapid Action

It instantly reacts on the rust and turns purple!

3. Screw Removal

Utilize Screw Removal Pliers to loosen the treated screw with sure-gripping jaws.
