

1A, Low IQ, High Accuracy, Fast Transient Low Dropout Voltage Regulator

DESCRIPTION

ETA5060 is a low dropout (LDO) voltage regulator capable of sourcing 1A with only 140mV of dropout. ETA5060 output is adjustable with external resistors from 0.8V to 5V. ETA5060 wide input-voltage range supports operation as low as 1.8V and up to 5.5 V.

ETA5060 is designed to have high accuracy, 2% at output voltage over line, load, and temperature. And ETA5060 soft-start capabilities to reduce in-rush current. ETA5060 is ideal for powering sensitive analog low-voltage devices.

ETA5060 is available in SOT89-5, HFBP1.2x1.6-8, DFN1.2x1.6-8, DFN2x2-6 and DFN2x2-8 packages.

FEATURES

- ◆ Programmable Output Voltage Configuration
- ◆ High Accuracy Output Voltage: $\pm 2\%$
- ◆ Wide Input Voltage Range: 1.8V to 5.5V
- ◆ Wide Output Voltage Range: 0.8V to 5V
- ◆ Low Power Consumption: 20 μ A Quiescent Current
- ◆ Low Dropout: 140mV at 1A
- ◆ Fast Transient Response
- ◆ Stable with Small 1 μ F Capacitor
- ◆ Inrush Current Protection
- ◆ Available in SOT89-5, HFBP1.2x1.6-8, DFN1.2x1.6-8, DFN2x2-6, and DFN2x2-8

APPLICATIONS

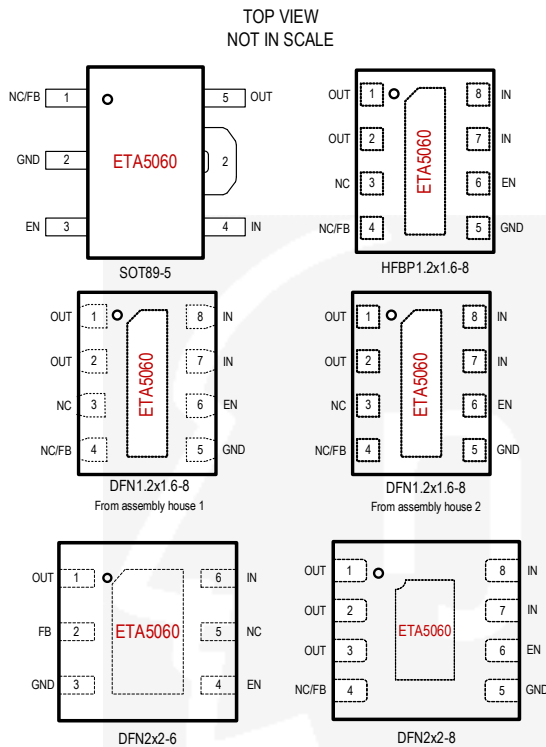

- ◆ USB Ports and Hubs
- ◆ Digital TVs
- ◆ Set-Top Boxes
- ◆ VOIP Phones

FUNCTIONAL DESCRIPTION

The ETA5060 family of LDO regulators has been optimized for use in noise-sensitive equipments. The device features extremely low dropout voltages, high PSRR, low output noise, low quiescent current, and enable-input to reduce supply currents to less than 1µA when the regulator is turned off.

Enable Sequence

ETA5060 is enabled when all below conditions happen. Otherwise, ETA5060 is in standby mode.

- ◆ EN pin voltage above Logic High level
- ◆ Junction Temperature is not at Over-Temperature Protection level.

Once all above conditions happen, ETA5060 enables LDO core.

ETA5060 is completed forced in shutdown mode when EN pin is at below V_{EN_LO} that supply current is less than 1µA. Otherwise, part only shutdowns the V_{OUT} while other circuit still in operation.

Output Current Limit and Foldback Current Limit

ETA5060 family features an internal current limit. In normal operation, the ETA5060 limits output current to approximately 1400mA. When current limiting engages, the output voltage scales back linearly until the over current condition ends.

In case output is in hard short conditions, ETA5060 also features an internal foldback limit that reduces the output current limit to a lower level, then reduce power dissipation ratings of the package.

Stability

ETA5060 can be stable with very wide range of output capacitor, from 1µF to 10µF

Over-Temperature Protection

Thermal protection disables the output when the junction temperature rises to approximately 160°C, allowing the device to cool down. When the junction temperature cools to approximately 130°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits regulator dissipation, protecting the device from damage as a result of overheating.

APPLICATION INFORMATION

External Output Voltage Setting

In external Output Voltage Setting Version selected, the ETA5060 regulator is programmed using an external resistor divider. The output voltage is calculated using below equation.

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R_1}{R_2}\right)$$

Resistors R_1 and R_2 should be chosen for approximately 40-µA divider current. Lower value resistors can be used for improved noise performance, but the solution consumes more power. Higher resistors values can cause accuracy issues. The recommended design procedure is to choose $R_2 = 20k\Omega$ to set the divider current at 40µA, then R_1 is calculated using below equation.

$$R_1 = \left(\frac{V_{OUT}}{V_{REF}} - 1\right) \times R_2$$
