Description

The IRM-36xxM3F45 series devices are miniature type infrared receivers which have been developed and designed by using the latest IC technology, specially optimized to suppress interferences from TFT backlight.

The photo diode and preamplifier are assembled onto a lead frame and molded into an epoxy package which operates as an IR filter. The demodulated output signal can directly be

decoded by a microprocessor.

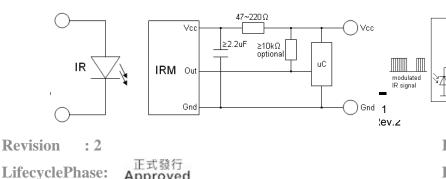

Applications

- AV equipment such as TV, VCR, DVD, CD, MD, etc.
- · Short pause time protocols
- Toy applications
- · CATV set top boxes
- Multi-media Equipment

Test method

The specified electro-optical characteristics are valid under the following conditions.

- 1. Measurement environment
 - A place without extreme light reflections.
- 2. External light

The environment contains an ordinary, white fluorescent lamp without high frequency modulation. The color temperature is 2856K and the illumination at the IR receiver is less than 10 Lux (Ev 10Lux).
