## SINGLE SURGE PERFORMANCE

### Notes:

1. SINGLE SURGE PERFORMANCE graph is good for NON REPETITIVE applications operating in an ambient temperature of 70°C or less. For temperatures above 70°C, the graph power must be derated further linearly down to zero at 125°C.
2. To determine applicable surge power in continuous-surge applications:
  - Identify allowable duration and peak power P<sub>surge</sub> of single surge;
  - Determine ratio of surge duration/surge OFF time in application;
  - Calculate P<sub>applicable</sub> backwardly according to Y-axis of SURGE POWER DERATING CURVE.
