USER MANUAL
EZConnect[™] (NN01-105)

EZConnect™ (NN01-105) – Zigbee, RFID, ISM 868/915

Ignion specializes in enabling effective mobile communications. Using Ignion technology, we design and manufacture optimized antennas to make your wireless devices more competitive. Our mission is to help our clients develop innovative products and accelerate their time to market through our expertise in antenna design, testing and manufacturing.

EZConnect™

1. ANTENNA DESCRIPTION

The EZConnect™ antenna has been specifically designed for wireless devices using Zigbee, RFID and other wireless standards operating at the ISM 868/915 MHz bands.

EZConnect™ antenna uses the space-filling properties of Ignion technology to become one of the smallest antennas for ISM868/915 applications. Additionally, the antenna maintains a high radiation efficiency that helps to improve the battery life of your devices and features an omnidirectional radiation pattern optimal for highly scattered environments such as indoor environments and public spaces.

Material: The EZConnect™ antenna is built on glass epoxy substrate.

APPLICATIONS

- Metering (Gas, Electricity, Water...)
- RFID (UHF Tags, Readers...)
- Sensors (Parking, Speed control, Optics...)
- Modules Zigbee
- Gateways

BENEFITS

- High efficiency and gain
- Cost-effective
- Small size
- Easy to use (pick and place)

2. QUICK REFERENCE GUIDE

Technical Features	902 – 928 MHz
Average Efficiency	82.0%
Peak Gain	1.7 dBi
Radiation Pattern	Omnidirectional
VSWR	< 2:1
Polarization	Linear
Weight (approx.)	0.2 g
Temperature	-40 to +125° C
Impedance	50 Ω
Dimensions (L x W x H)	18.0 mm x 7.3 mm x 0.8 mm

Table 1 – Technical Features. Measures from the evaluation board. See Figure 1.

Please contact support@ignion.io if you require additional information on antenna integration or optimization on your PCB.

3. ELECTRICAL PERFORMANCE

3.1. EVALUATION BOARD

The 915MHz configuration for the EZConnect[™] chip antenna used in the PCB Evaluation Board, Figure 1 and picture in page 8 corresponds to the 902 – 928 MHz band.

Figure 1 – EB_NN01-105A. EZConnect[™] Evaluation Board in the 902 – 928 MHz band.

3.2. MATCHING NETWORK

The specs of a Ignion standard antenna are measured in their evaluation board, which is an ideal case. In a real design, components nearby the antenna, LCD's, batteries, covers, connectors, etc. affect the antenna performance. This is the reason why it is highly recommended placing pads compatible with 0402 and 0603 SMD components for a PI matching network as close as possible to the antenna feeding point. Do it in the ground plane area, not in the clearance area. This is a degree of freedom to tune the antenna once the design is finished and considering all elements of the system (batteries, displays, covers, etc.).

Please notice that different devices with different ground planes and different components nearby the EZConnect[™] chip antenna may need a different matching network. To ensure optimal results, the use of high Q and tight tolerance components is highly recommended (Murata components). If you need assistance to design your matching network beyond this application note, please contact support@ignion.io, or try our free-of-charge¹ **NN Wireless Fast-Track** design service, you will get your chip antenna design including a custom matching network for your device in 24h¹. Other related to NN's range of R&D services is available at: <https://www.ignion.io/rdservices/>

¹ See terms and conditions for a free NN Wireless Fast-Track service in 24h at: <https://www.ignion.io/fast-track-project/>

3.3. VSWR AND EFFICIENCY

VSWR (Voltage Standing Wave Ratio) and Total Efficiency versus Frequency (GHz).

Figure 2 – VSWR and Efficiency (%) vs. Frequency (GHz).

NOTE: to work at **ISM 868 MHz** band in the EZConnect™ antenna, please download the following [application](#) in www.ignion.io.

3.4. RADIATION PATTERNS (902 – 928 MHz), GAIN AND EFFICIENCY

Gain	Peak Gain	1.7 dBi
	Average Gain across the band	1.6 dBi
	Gain Range across the band (min, max)	1.6 <--> 1.7 dBi
Efficiency	Peak Efficiency	85.2 %
	Average Efficiency across the band	82.8 %
	Efficiency Range across the band (min, max)	80.0 – 85.2 %

Table 2 – Antenna Gain and Efficiency within the 902 – 928 MHz band. Measures made in the evaluation board and in the Satimo STARGATE 32 anechoic chamber.

3.5. CAPABILITIES AND MEASUREMENT SYSTEMS

Ignion specializes in the design and manufacture of optimized antennas for wireless applications, and with the provision of RF expertise to a wide range of clients. We offer turn-key antenna products and antenna integration support to minimize your time requirements and maximize return on investment throughout the product development process. We also provide our clients with the opportunity to leverage our in-house testing and measurement facilities to obtain accurate results quickly and efficiently.

4. MECHANICAL CHARACTERISTICS

4.1. DIMENSIONS AND TOLERANCES

The black circle located on the bottom side of the antenna indicates the feed pad.

Measure	mm	Measure	mm
A	18.0 ± 0.2	F	4.5 ± 0.2
B	7.3 ± 0.2	G	1.0 ± 0.05
C	0.8 ± 0.2	H	4.1 ± 0.1
D	15.2 ± 0.2	I	1.4 ± 0.05
E	0.4 ± 0.1		

Figure 3 – Antenna Dimensions and Tolerances.

The EZConnect™ chip antenna is compliant with the restriction of the use of hazardous substances (**RoHS**). The RoHS certificate can be downloaded from www.ignion.io.

4.2. SPECIFICATIONS FOR THE INK

Next figure shows the correct colors of the antenna:

Acceptable color range

4.3. ANTENNA FOOTPRINT (as used in the evaluation board)

This antenna footprint applies for the reference evaluation board described on page 6 of this User Manual.

Figure 4 – Antenna Footprint Details.

Other PCB form factors and configurations may require a different feeding configuration, feeding line dimensions and clearance areas. If you require support for the integration of the antenna in your design, please contact support@ignion.io.

5. ASSEMBLY PROCESS

Figure 5 shows the back and front view of the EZConnect™ antenna, and indicates the location of the feeding point and the mounting pads:

Figure 5 – Pads of the EZConnect™ chip antenna.

As a surface mount device (SMD), this antenna is compatible with industry standard soldering processes. The basic assembly procedure for this antenna is as follows:

1. Apply a solder paste to the pads of the PCB. Place the antenna on the board.
2. Perform a reflow process according to the temperature profile detailed in Table 3, Figure 7 on page 13.
3. After soldering the antenna to the circuit board, perform a cleaning process to remove any residual flux. Ignion recommends conducting a visual inspection after the cleaning process to verify that all reflux has been removed.

The drawing below shows the soldering details obtained after a correct assembly process:

Figure 6 – Soldering Details.

NOTE(*): Solder paste thickness after the assembly process will depend on the thickness of the soldering stencil mask. A stencil thickness equal to or larger than **127 microns (5 mils)** is required.

The EZConnect[™] antenna should be assembled following either Sn-Pb or Pb-free assembly processes. According to the Standard **IPC/JEDEC J-STD-020C**, the temperature profile suggested is as follows:

Phase	Profile features	Pb-Free Assembly SnAgCu)
RAMP-UP	Avg. Ramp-up Rate (T _{smax} to T _p)	3 °C / second (max.)
PREHEAT	- Temperature Min (T _{smin}) - Temperature Max (T _{smax}) - Time (t _{smin} to t _{smax})	150 °C 200 °C 60-180 seconds
REFLOW	- Temperature (T _L) - Total Time above T _L (t _L)	217 °C 60-150 seconds
PEAK	- Temperature (T _p) - Time (t _p)	260 °C 20-40 seconds
RAMP-DOWN	Rate	6 °C/second max
Time from 25 °C to Peak Temperature		8 minutes max

Table 3 – Recommended soldering temperatures.

Next graphic shows temperature profile (grey zone) for the antenna assembly process in reflow ovens.

Figure 7 – Temperature profile.

6. PACKAGING

The EZConnect[™] chip antenna is available in tape and reel packaging.

Measure	mm
W	32.0 ± 0.3
A0	7.7 ± 0.1
B0	18.3 ± 0.1
K0	1.2 ± 0.1
B1	19.1 max
D	1.55 ± 0.05
D1	2.1 min
Wmax	32.3
E	1.75 ± 0.1
F	14.2 ± 0.1
K	1.5 ± 0.1
P	12.0 ± 0.1
P0	4.0 ± 0.1
P2	2.0 ± 0.1

Figure 8 – Tape Dimensions and Tolerances.

Figure 9 – Image of the tape.

Measure	mm
A max	330.0 ± 1
G	33.5 ± 0.2
t max	37.5 ± 0.2

Reel Capacity: 2500 antennas

Figure 10 – Reel Dimensions and Capacity.

7. PRODUCT CHANGE NOTIFICATION

This document is property of Ignion,
Not to disclose or copy without prior written consent

PCN Number: NN19100003

Notification Date: October 17th, 2019

Part Number identification:

Part Number changes will be applied in all the documentation of the product (User Manual, Data Sheet, ...)

Previous Part Number
FR05-S1-R-0-105

New Part Number
NN01-105

Reason for Change:

<input type="checkbox"/>	Specs (electrical/mechanical)	<input type="checkbox"/>	Manufacturing location
<input type="checkbox"/>	User Manual/Data Sheet	<input type="checkbox"/>	Quality/Reliability
<input type="checkbox"/>	Material/Composition	<input type="checkbox"/>	Logistics
<input type="checkbox"/>	Processing/Manufacturing	<input checked="" type="checkbox"/>	Other: Logo, product color and Part Number

Change description

- 1.- Part Number: From FR05-S1-R-0-105 FRACTUS to NN01-105 Ignion in the User Manual
- 2.- Color: From black/white to white/black

Comments:

- 1.- Electrical and Mechanical specs remain the same
- 2.- Footprint in the PCB to solder the chip antenna remains the same

Identification method

- 1.- The changes applied to the color, the logo, and the part number

User Manual	<input checked="" type="checkbox"/>	Available from: December 2019
Samples	<input checked="" type="checkbox"/>	Available from: December 2019
