QorIQ P5020 and P5010 communications processors

Overview

The QorIQ P5 family delivers scalable 64-bit processing with single-, dual- and quad-core devices. With frequencies scaling up to 2.0 GHz, a tightly coupled cache hierarchy for low latency and integrated hardware acceleration, the P5020 (dual-core) and P5010 (single-core) devices are ideally suited for compute intensive, power-conscious control plane applications.

Target Markets and Applications

The P5020 is designed for high-performance, power-constrained control plane applications and provides an ideal combination of core performance, integrated accelerators and advanced I/O required for the following compute-intensive applications:

- Enterprise equipment: Router, switch, services
- Data center: Server appliance, SAN storage controller, iSCSI controller, FCoE bridging
- Aerospace and defense
- Industrial computing: Single-board computers, test/measurement, robotics

e5500 Core

The P5020 is based on the 64-bit e5500 Power Architecture® core. The e5500 core uses a seven-stage pipeline for low latency response to unpredictable code execution paths, boosting its single-threaded performance. Key features:

- Supports up to 2 GHz core frequencies
- Tightly coupled low latency cache hierarchy: 32 KB I/D (L1), 512 KB L2 per core
- Up to 2 MB of shared platform cache (L3)
- 3 DMIPS/MHz per core
- Up to 64 GB of addressable memory space
- Hybrid 32-bit mode to support legacy software and seamless transition to 64-bit architecture

Virtualization

The P5020 includes support for hardware-assisted virtualization. The e5500 core offers an extra core privilege level (hypervisor). Virtualization software for the P5 family includes kernel-based virtual machine (KVM), Linux® containers, Freescale hypervisor and commercial virtualization software from Green Hills® Software and Enea®.

DPAA Hardware Accelerators

Frame manager (FMAN)	12 Gb/s classify, parse and distribute
Buffer manager (BMAN)	64 buffer pools
Queue manager (QMAN)	Up to 2 ²⁴ queues
Security (SEC)	17 Gb/s: 3 DES, AES
Pattern matching engine (PME)	10 Gb/s aggregate
RapidIO® manager	Supports Type 9 and Type 11 messaging
RAID5/6 engine	Calculates parity for network attached storage and direct attached storage applications

Data Path Acceleration Architecture (DPAA)

The P5020 integrates QorIQ DPAA, an innovative multicore infrastructure for scheduling work to cores (physical and virtual), hardware accelerators and network interfaces. The FMAN, a primary element of the DPAA, parses headers from incoming packets and classifies and selects data buffers with optional policing and congestion management. The FMAN passes its work to the QMAN, which assigns it to cores or accelerators with a multi-level scheduling hierarchy. The P5020 also offers accelerators for cryptography, enhanced regular expression pattern matching and RAID5/6 offload.

System Peripherals and Networking

For networking, the FMAN supports one 10 Gb/s and 5x 1 Gb/s MAC controllers that connect to PHYs, switches and backplanes over RGMII, SGMII and XAUI. High-speed system expansion is supported through four PCI Express v2.0 controllers that support a variety of lane widths. Other peripherals include SATA, SD/MMC, I²C, UART, SPI, NOR/NAND controller, GPIO and dual 1333 MT/s DDR3/3L controllers.
