## Cautions

- All values mentioned in this datasheet are provided under ideal conditions. Please perform the confirmation test before actual use.
- Reflow soldering is prohibited.
- Do not use relays in the atmosphere with sulfide gas, chloride gas or nitric oxide. Contact resistance may increase.
- Do not use silicon or silicon-containing product or materials near relays. It may cause contact failure.

## RoHS Compliance and Lead Free Information

## 1. General Information

- All signal and power relays produced by Fujitsu Components are compliant with RoHS directive 2002/95EC including amendments.
- Cadmium as used in electrical contacts is exempted from the RoHS directives on October 21st, 2005. (Amendment to Directive 2002/95/EC)
- All of our signal and power relays are lead-free. Please refer to Lead-Free Status Info for older date codes at: http://www.fujitsu.com/us/downloads/MICRO/fcai/relays/lead-free-letter.pdf
- Lead free solder plating on relay terminals is $\mathrm{Sn}-3.0 \mathrm{Ag}-0.5 \mathrm{Cu}$, unless otherwise specified. This material has been verified to be compatible with PbSn assembly process.

## 2. Recommended Lead Free Solder Profile

- Recommended solder Sn-3.0Ag-0.5Cu.

## Flow Solder condition:

Pre-heating: maximum $120^{\circ} \mathrm{C}$ within 90 sec.
Soldering: $\quad$ dip within 5 sec . at $255^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ solder bath
Relay must be cooled by air immediately after soldering

## Solder by Soldering Iron:

Soldering Iron $\quad 30-60 \mathrm{~W}$
Temperature: maximum $350-360^{\circ} \mathrm{C}$
Duration: maximum 3 sec .

## We highly recommend that you confirm your actual solder conditions

## 3. Moisture Sensitivity

- Moisture Sensitivity Level standard is not applicable to electromechanical relays, unless otherwise indicated.

## 4. Tin Whiskers

- Dipped SnAgCu solder is known as presenting a low risk to tin whisker development. No considerable length whisker was found by our in house test.
