## General Description

The GS226X series amplifiers are newest high supply voltage amplifiers with low offset, low power and stable high frequency response. Good AC performance with 11MHz bandwidth, 23V/ $\mu$ s slew rate and low distortion while drawing only 2.7mA of quiescent current per amplifier. The input common-mode voltage range extends to  $-V_S$ , and the outputs swing rail-to-rail. The GS226X family can be used as plug-in replacements for many commercially available Op-Amps to reduce power and improve input/output range and performance. The GS2261 single is available in SOT23-5 package. The GS2262 Dual is available in Green SOP-8 and MSOP-8 packages. The GS2264 Quad is available in Green SOP-14 and TSSOP-14 packages.
