## General Description

The GS3221 is low on－resistance（1．5 $)$ ，fast single－pole double－throw（SPDT）CMOS switch with operation range $+1.8 \mathrm{~V} \sim$ +5.5 V ．The GS3221 is designed for low operating voltage，high current switching of signal gating，chopping，modulation or demodulation（modem），and speaker output for cell phone applications．
The device contains a break－before－make（BBM）feature．The control input，IN，tolerates input drive signals up to 5.5 V ， independent of supply voltage．
All devices are specified for the temperature range of $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ ．The GS3221 single is available in Green SC70－6 and SOT23－6 packages．

## Applications

－Battery－Operated Equipment
－Wearable Devices
－Computer Peripherals
