Compliance with Equipment Standards

Fulfills building regulations set forth in DIN VDE 0413.

Phase Sequence Testing in 3-Phase Systems

Phase sequence is acquired by means of an electronic circuit. The direction of rotation is indicated by one of two directional arrows, each of which is equipped with an LED.

Testing for Phase Failure

An LED is provided for each phase which indicates whether or not the phase conductor is live.

Large Voltage and Frequency Ranges

The device can be used in all low-voltage systems.

Rugged Design

The device is capable of withstanding severe mechanical stressing. The connector cables are permanently attached to the device.
