

Green-Mode PWM Controller with Integrated Protections

Features

- Current mode PWM
- Very low startup current
- Under-voltage lockout (UVLO)
- Non-audible-noise green-mode control
- Programmable switching frequency
- Cycle-by-cycle peak current limiting
- Internal leading-edge blanking
- Internal slope compensation
- Internal 4ms soft start (Fs=65KHz)
- VCC over voltage clamp
- Gate output voltage clamp
- Soft driving for reducing EMI
- Over-voltage protection (OVP) on VCC Pin
- Over-load protection (OLP)
- Over-current protection (OCP) on CS Pin
- 300mA driving capability
- Meet the standard of Green Partner, SONY SS-00259

Applications

- Switching AC/DC power adapter and battery charger
- Open-frame SMPS

Description

The GR8835A is a highly-integrated, low startup current, current mode PWM controller with Green-mode function. This function enables the power supply to easily meet even the strictest power conservation requirements. The integrated functions also include the leading-edge blanking of the current sensing, internal slope compensation, cycle-by-cycle peak current limiting and soft start. OLP, OCP and OVP provide protection performance for fault conditions. To protect the external power MOSFET from being damaged by supply over voltage, the GR8835A gate voltage is clamped about 18V.

The GR8835A improves the performance and reduces the cost of power supplies. It is with both 8-pin DIP and 6-pin SOT-26 package.

Ordering and Marking Information

Greenergy OPTO Inc. reserves the right to make changes to improve reliability or manufacture ability without notice, and advise customers to obtain the latest version of relevant information to verify before placing orders.

Pin Configuration

DIP- 8 (TOP VIEW)

SOT- 26 (TOP VIEW)

Pin Description

Pin No.	Name	Function
1	GND	Ground
2	COMP	Voltage feedback pin, by connecting a photo-coupler to control the duty cycle
3	RT	Connecting a resistor to ground, this resistor determine the switching frequency
4	CS	Current sense pin, connect to sense the MOSFET current
5	VCC	Power supply pin
6	OUT	The output driver for driving the external MOSFET

Note: Pin No. is only for SOT-26 package.

Absolute Maximum Ratings

Supply Voltage VCC	32V
COMP, RT, CS	-0.3 ~ 7V
Junction temperature	150°C
Operating ambient temperature	-40°C ~ 85°C
Storage temperature range	-65°C ~ 150 °C
SOT-26 package thermal resistance	250°C/W
Power dissipation (SOT-26, at Ambient Temperature = 85°C)	250mW
Power dissipation (DIP-8, at Ambient Temperature = 85°C)	650mW
Lead temperature (All Pb Free Packages, Soldering, 10 sec)	260°C
ESD voltage protection, human body model	3KV
ESD voltage protection, machine model	250V

Recommended Operating Conditions

Item	Min.	Max.	Unit
Supply voltage VCC	11	25	V
Switching Frequency	50	130	KHz

Block Diagram

Electrical Characteristics ($T_A = +25^{\circ}\text{C}$ unless otherwise stated, $V_{CC} = 15.0\text{V}$)

Parameter	Pin	Min.	Typ.	Max.	Unit
-----------	-----	------	------	------	------

SUPPLY VOLTAGE

Startup current	5		8	20	uA
Operating current (with 1nF load on OUT pin), $V_{comp} = 0\text{V}$	5		2.0	3.0	mA
Operating current (with 1nF load on OUT pin), $V_{comp} = 2.5\text{V}$	5		2.5		mA
Operating current (with 1nF load on OUT pin), protection tripped (OLP, OVP)	5		0.5		mA
UVLO(off)	5	8.0	9.0	10.0	V
UVLO(on)	5	14.0	15.0	16.5	V
OVP level on VCC pin	5	26.5	28	29.5	V
VCC zener clamp	5		32		V

VOLTAGE FEEDBACK

Short circuit current, $V_{comp} = 0\text{V}$	2		1.5	2.2	mA
Open loop voltage, COMP pin open	2		5.4		V
Green-mode threshold voltage	2		1.2		V

CURRENT SENSING

Maximum input voltage, V_{cs} (off)	4	0.76	0.8	0.87	V
Leading edge blanking time	4		350		nS
Input impedance	4	1			$\text{M}\Omega$
Delay to output	4		100		nS

OSCILLATOR

Frequency ($R_T = 100\text{K}\Omega$)	3	60	65	70	KHz
Green mode frequency ($R_T = 100\text{K}\Omega$)	3		20		KHz
Temp. stability ($-40^{\circ}\text{C} \sim 110^{\circ}\text{C}$)	3			3	%
Voltage stability ($V_{CC} = 11\text{V} \sim 25\text{V}$)	3			3	%

GATE DRIVER OUTPUT

Output low level, $V_{CC} = 15\text{V}$, $I_o = 20\text{mA}$	6			1	V
Output high level, $V_{CC} = 15\text{V}$, $I_o = 20\text{mA}$	6	8			V
Rising time, load capacitance = 1000pF	6		350		nS
Falling time, load capacitance = 1000pF	6		30	100	nS
VGATE-clamp ($V_{CC} = 25\text{V}$)	6		18		V

OLP

OLP trip level, V_{comp} (OLP)	-		3.6		V
OLP delay time (note), $F_s = 65\text{KHz}$	-		60		mS

Note: Pin No. is only for SOT-26 package.

Application Information

Start-up Current

The typical start-up current is 8 μ A. Very low start-up current allows the PWM controller to increase the value of start-up resistor and then reduce the power dissipation on it.

Under-voltage Lockout (UVLO)

A hysteresis UVLO comparator is implemented in GR8835A, then the turn-on and turn-off thresholds level are fixed at 16V/15V and 10V/9V respectively. This hysteresis shown in Fig.13 ensures that the start-up capacitor will be adequate to supply the chip during start-up.

Fig.13

Soft Start

During initial power on, the GR8835A provides soft start function. It effectively suppresses the start up peak current to reduce the power MOSFET drain voltage especially at high line.

Oscillator

The maximum duty-cycle of internal oscillator is limited about 75% to avoid the transformer saturation. The frequency of the oscillator is decided by an external resistor connected from RT pin to ground.

$$F_{osc} = 6500\text{KHz}/R \text{ (Kohm)}$$

Where R is the resistor connected at RT pin. A 100Kohm resistor results in 65KHz switching frequency. The recommended range of oscillation frequency is 50 KHz~130 KHz.

Green-Mode Operation

When the load decreases to an extent, the frequency of the controller will decrease so as to reduce the system power consumption. The minimum frequency is about 20 KHz, which is outside the audio range.

Leading-Edge Blanking (LEB)

Each time the power MOSFET is switched on, a turn-on spike will inevitably occur at the sense resistor. To avoid fault trigger, a 350ns leading-edge blanking time is built in. Conventional RC filtering can therefore be omitted. During this blanking period, the current-limit comparator is disabled and can not switch off the gate driver.

Internal Slope Compensation

A built-in slope compensation circuit is constructed in GR8835A. When the switch is on, a ramp voltage is added to the sensed voltage across the CS pin, which helps to stabilize the system and prevent sub-harmonic oscillations.

Over-load Protection (OLP)

The controller has over load protection function. An internal circuit detects the load level, when the load is larger than a threshold and the condition lasts more than 60ms, the gate output will keep low level. Then VCC decreases below UVLO off level, the controller resets again. Fig.14 shows the waveform of the OLP operation.

Fig.14

OVP (Over Voltage Protection) on VCC

To prevent power MOSFET from being damaged, the GR8835A is implemented an OVP function on VCC. When the VCC voltage is higher than the OVP threshold voltage, the output gate driver circuit will be shut down immediately to stop the switching of power MOSFET.

The VCC OVP function is an auto-recovery type protection. If OVP happens, the pulses will be stopped and recover at the next UVLO on. The GR8835A is working in a hiccup mode.

Gate Clamp/Soft Driving

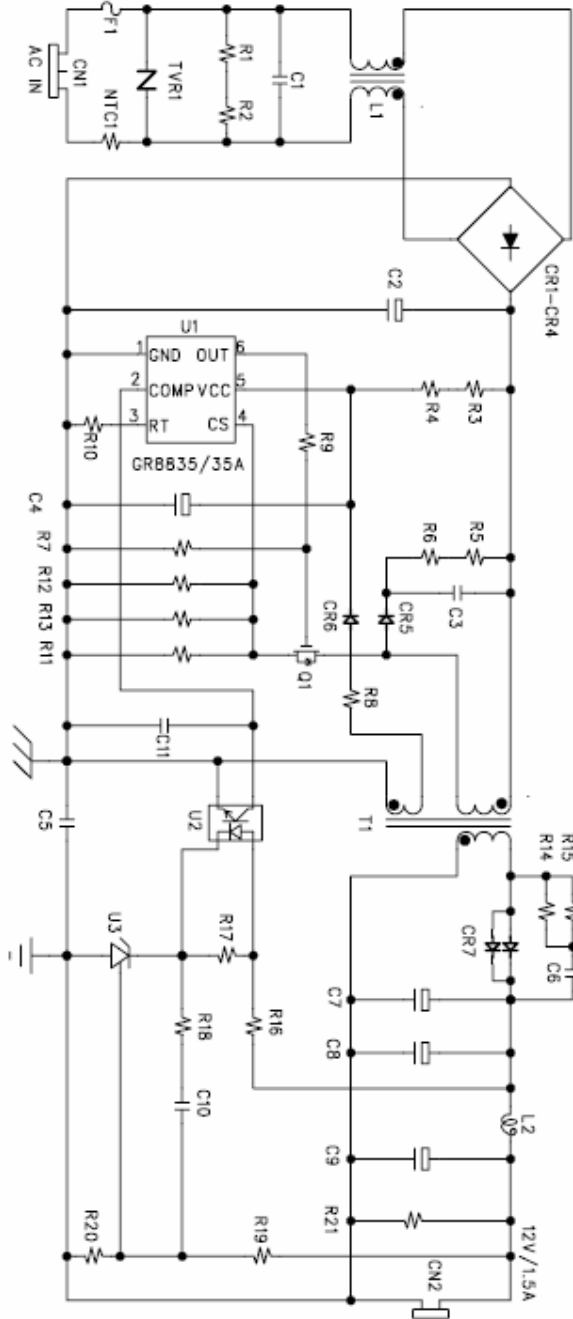

Driver is clamped by an internal 18V Zener diode. Those damages usually come from undesired over-voltage gate signals. Under the conditions listed below, the gate output will turn off immediately to protect the power circuit. The GR8835A also has soft driving function to minimize EMI.

Fault Protection

There are several critical protection integrated in the

- . CS pin floating
- . RT pin floating
- . RT pin short to ground
