

### **Current Mode PWM Power Switch**

#### **Features**

- Current Mode PWM
- Very Low Startup Current
- Under-Voltage Lockout (UVLO)
- Non-Audible-Noise Green-Mode Control
- Fixed Switching Frequency of 65KHz
- Cycle-by-Cycle Peak Current Limiting
- Internal Leading-Edge Blanking
- Internal Slope Compensation
- Less than 0.1W of Power Saving
- Over-Voltage Protection (OVP) on VCC Pin
- Over-Load Protection (OLP)

### **Applications**

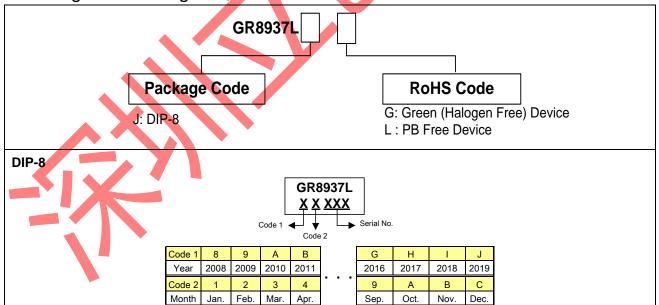

- Switching AC/DC Power Battery Charger
- Digital Camera
- Open-Frame SMPS
- PDA Power Supply

### Description

GR8937L integrates a PWM controller and high voltage power MOSFET of 650V. GR8937L has the features of very low startup current and current mode PWM control with green-mode function at light load. The integrated functions of GR8937L also include the leading-edge blanking of the current sensing, internal slope compensation, cycle-by-cycle peak current limiting and soft start. OCP, OVP and OLP provide protection performance for fault conditions. These functions enable the power supply to easily meet even the strictest power requirements.

GR8937L improves the performance and reduces the cost of power supplies.

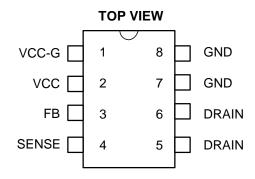

## Ordering and Marking Information

Grenergy OPTO Inc. reserves the right to make changes to improve reliability or manufacture ability without notice, and advise customers to obtain the latest version of relevant information to verify before placing orders.

## Pin Configuration

## Pin Description

| Pin No. | Symbol | Description   |
|---------|--------|---|
| 1       | VCC-G  | Power supply input for internal gate driver                                   |
| 2       | VCC    | Power supply input for IC   |
| 3       | FB     | Voltage feedback pin, by connecting a photo-coupler to control the duty cycle |
| 4       | SENSE  | Current sense pin   |
| 5, 6    | DRAIN  | Drain of internal HV MOS  |
| 7, 8    | GND    | Ground  |

# Recommended Operating Conditions

| Item                      | Min. | Max. | Unit |
|---------------------------|------|------|------|
| Supply voltage VCC        | 11   | 25   | V    |
| VCC-G pin series resistor | 51   | 510  | Ohm  |
| VCC pin series resistor   | 10   | 75   | Ohm  |
| FB pin capacitor          | 1    | 100  | nF   |

Note: 1. FB pin parallel one 6.5V Zener diode for Safety Regulation on abnormal test.

2. Sense pin resistor recommended to use SMD type for avoiding stray inductor interference issue.

# Recommended Output Power Range

| Dorf No. | 90~264Vac  |         |  |
|----------|------------|---------|--|
| Part No. | Open frame | Adaptor |  |
| GR8937L  | 15W        | 12W     |  |

Notes: Maximum practical continuous power in an open frame design with sufficient drain pattern as a heat sink, at 50°C ambient.

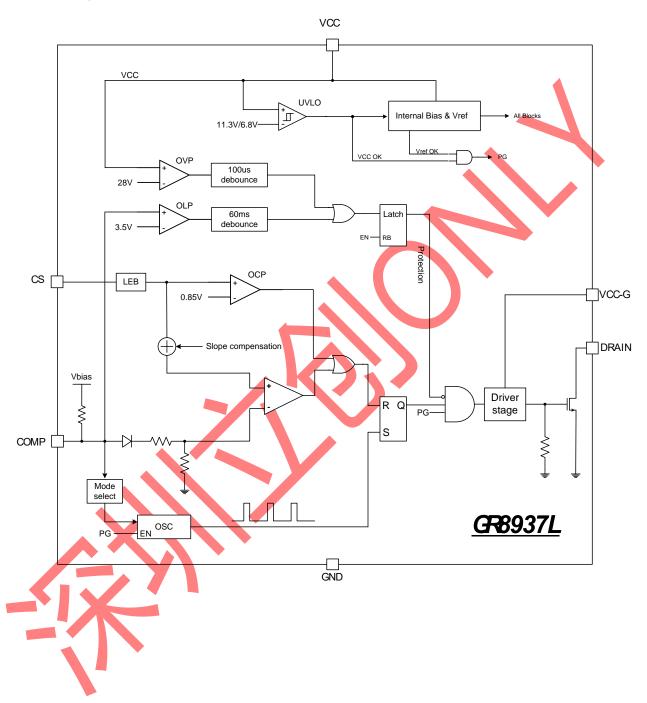

# Absolute Maximum Ratings

| Drain Voltage                                     | -0.3V ~ 6      | 50V        |
|---|----------------|------------|
| Supply Voltage VCC                                | :              | 30V        |
| VCC-G   | :              | 30V        |
| FB,Sense  | -0.3 ~         | 7V         |
| Max Operating Junction Temperature                | 15             | <b>0</b> ℃ |
| Operating Ambient Temperature                     |                | 5℃         |
| Storage Temperature Range                         | -65℃ ~ 15      | 0℃         |
| Lead Temperature (All Pb free packages, soldering | ng, 10 sec) 26 | 0°C        |
| ESD Voltage Protection, Human Body Model          |                | 2KV        |
| ESD Voltage Protection, Machine Model             | 20             | 00V        |

### **Application Information**

#### **Start-up Current**

The typical start-up current is 8uA. Very low start-up current allows the PWM controller to increase the value of start-up resistor and then reduce the power dissipation on it.

#### **Under-voltage Lockout (UVLO)**

A hysteresis UVLO comparator is implemented in GR8937L, then the turn-on and turn-off thresholds level are fixed on 11.3V and 6.8V respectively. This hysteresis shown in Fig. 7 ensures that the start-up capacitor will be adequate to supply the chip during start-up.

#### **Soft Start**

During initial power on, GR8937L provides soft start function. It effectively suppresses the start up peak current to reduce the power MOSFET drain voltage especially at high line.

#### Oscillator

The frequency of the oscillator is fixed internally at

about 65kHz. The maximum duty-cycle of internal oscillator is limited about 75% to avoid the transformer saturation.

#### **Green Mode Operation**

When the load decreases to an extent, the frequency of the controller will decrease so as to reduce the system power consumption. The minimum frequency is about 22KHz, which is outside the audio range.

#### Leading-edge Blanking (LEB)

Each time the power MOSFET is switched on, a turn-on spike will inevitably occur at the sense resistor. To avoid fault trigger, a 350ns leading-edge blanking time is built in. Conventional RC filtering can therefore be omitted. During this blanking period, the current-limit comparator is disabled and can not switch off the gate driver.

#### Internal Slope Compensation

Built-in slope compensation circuit adds voltage ramp in the current sense input voltage for PWM generation. This greatly improves the close loop stability at CCM and prevents the sub-harmonic oscillation and thus reduces the output ripple voltage.

#### **Over-load Protection (OLP)**

The controller has over load protection function. An internal circuit detects the load level, when the load is larger than a threshold and the condition lasts more than 60ms, the gate output will keep low level. Then VCC decreases below UVLO off level, the controller resets again.

#### Over-voltage Protection (OVP) on VCC

To prevent power MOSFET from being damaged, GR8937L is implemented an OVP function on VCC. When the VCC voltage is higher than the OVP threshold voltage, the output gate driver circuit will be shut down immediately to stop the switching of internal HV power MOSFET.

The VCC OVP function is an Auto-recovery type

protection. If OVP happens, the pulses will be stopped and recover at the next UVLO on. GR8937L is working in a hiccup mode.

#### **Gate Driver**

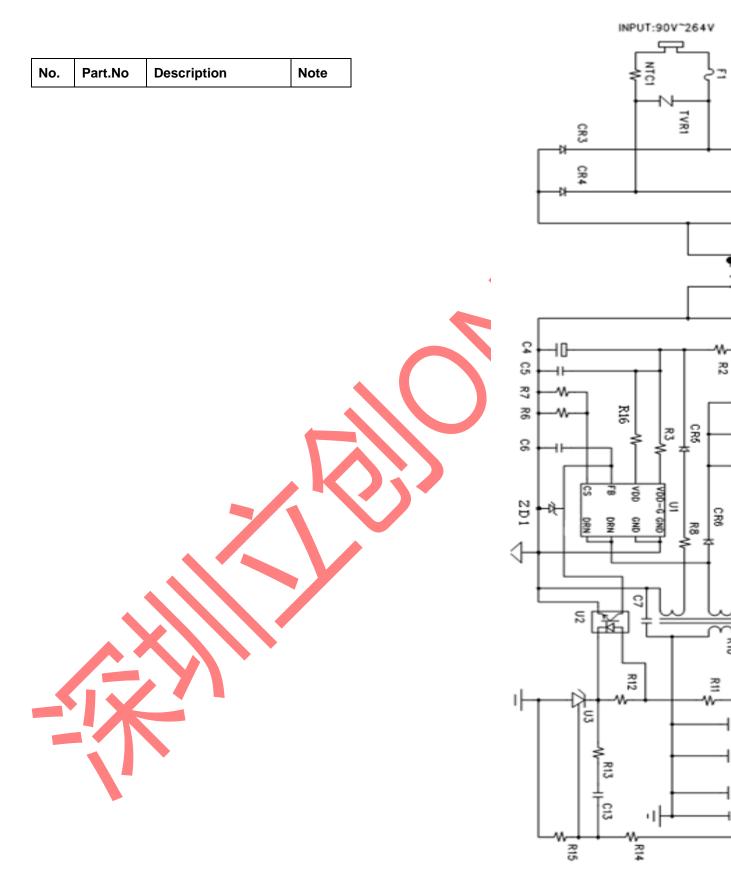

Driving capability can be adjusted by a resistor between VCC and VCC-G for EMI improvement.

**Typical Application Circuit** 

The resistor can decrease rising time of internal gate driver. But be attention that too large resistance could decrease system efficiency (especially at CCM condition).
