

# BNC SERIES RF CO-AXIAL CONNECTORS

## Overview

The BNC series are most widely used as 50Ω coaxial connectors, and compact size, light weight, and quick mounting and dismounting (bayonet lock coupling). Suitable for coaxial cables (RG-55.58/U) with a finished outside diameter of  $\phi 3-\phi 8$ .

## Applicable standards

Defense Agency (NDS XC 6103, DSP C 6202)

Japanese Industrial Standards (JIS C 5412)

NTT (Model 2095 3C connector)

\*Meets MIL Specifications. (See Products Meeting MIL Specifications Index Table, pages 220-221.)

## Electrical Specifications

Item	Standard
Characteristic impedance	50Ω(*1)
Withstand voltage	1,500Vr.m.s. for 1min.
Insulation resistance	5,000MΩ or more at 500VDC
Contact resistance	3mΩ or less at 1ADC
Applicable frequency range	DC-4GHz
Voltage standing wave	1.2 or less(DC-2GHz)

(\*1) Not different in electrical specifications from the 50Ω cable when connected to the 75Ω coaxial cable (3C-2V) for use at low frequencies (DC-200MHz).

## Main Materials/Finish

Part	Material	Finish(*2)
Armor(shell)	Brass	Silver plated, Nickel-plated
Male terminal	Brass	Silver plated, Gold-plated
Female terminal	Beryllium copper	Silver plated, Gold-plated
Insulation	Tetraflouride resin	—
Gasket	Silicon rubber	—

(\*2) Surface treatment differs according to the product number unit.  
For details, see the BNC Connector List.

## Connecting methods

The ends are processed as shown in the drawing (refer to Table 1). For the end processing dimensions  $L_1$ , refer to Table 1, End processing dimensions arranged by part number.

- (1) Insert clamp from tip of cable and fold outer conductor of cable back onto clamp. Using a knife, cut off excess outer conductor left at this time.
- (2) Cut off center conductor of cable at  $L_2$ , from surface A of cable insulation. For end processing dimensions  $L_2$ ,  $L_B$ , refer to Table 1, End processing dimensions arranged by part ( $L_3$  is a reference dimension.)  
(Note: Be careful not to damage center conductor.)
- (3) Solder contact and center conductor. It is a good idea at this time to solder the terminal preliminarily in advance.  
(Note: There must be no gap between the end and the cable insulation.)

Insert cable and parts into shell and tighten tightening nut sufficiently.

# BNC SERIES RF CO-AXIAL CONNECTORS

## Assembling methods

1. Cut off 13mm of the cable's outer covering and expose the shielded wire.

2. Put the cap through the cable, insert the clamp, and unbraid the shielded wire.

3. Wind the shielded wire onto the clamp. At this time, cut off the shielded wire at position A in the drawing, leaving some gap.

4. Cut off the insulation, leaving about 2mm of it.

5. Fit the contactor of the outer conductor tightly onto the clamp, position a knife on the notched window, and cut off the insulation. Take care not to damage the center conductor at this time.

6. Solder the center conductor with the contactor of the outer conductor fitting tightly onto the clamp.

7. Insert the block described above so that it will fit into the groove on the clamp and the embossed mark on the armor. Tighten the cap thoroughly. The tools used are a JIS spanner (width 12) and a JIS spanner or monkey wrench (width 14).

# Non-reflective Terminations (BNC)

## BNC-TM Series

### ■ Features

#### 1. High Performance

These wide bandwidth/ultra high matching non-reflective termination use Hirose Electric original high frequency matching technology.

#### 2. Full Assortment of 50 ohms and 75 ohms Types

In addition to the 50 ohms impedance type, plugs and jacks are available in a 75 ohms type.

### ■ Product Specifications

Ratings	Frequency range (Note) Characteristic impedance Maximum Input Power (Note)	DC to 4.0 GHz 50 ohms, 75 ohms 0.5 to 1 W	Operating temperature range Operating relative humidity	-10°C to +65°C 95% Max.
---------	--	---	--	----------------------------

Note: The frequency range and the maximum input power will differ depending on the products.

Item	Standard	Conditions
1. Vibration	No electrical discontinuity of 1 $\mu$ s or more No damage, cracks, or parts dislocation	Frequency of 10 to 2000 Hz, overall amplitude of 1.52 mm, acceleration of 98 m/s <sup>2</sup> for 2 hours in each of 3 directions
2. Shock		Acceleration of 490 m/s <sup>2</sup> , sine half-wave waveform, 3 cycles in each of the 3 axis
3. Temperature cycle	No electrical discontinuity of 1 $\mu$ s or more	Temperature: -55°C → +15°C to +35°C → +85°C → +15°C to +35°C Time: 30 → 15 max. → 30 → 15 max. (Minutes) 100 cycles

● The test method conforms to MIL-STD-202.

### ■ Materials

Part	Material	Finish
Connector Body	Brass	Nickel plating
Insulator	PTFE	—
Male contacts	Brass	Gold plating
Female contacts	Beryllium copper	Gold plating
Resistor	Metal film	—
Cover	PVC	—

### ■ Ordering Information

**BNC - TM P - 05 - 1 (41)**
