0.4mm Pitch, 1.5mm Board-to-Board Connectors with Dual Shielding

FX12 Series

Features

1. Dual shields

Built-in shield plates and metal fittings in the plugs and receptacles prevent electromagnetic emission and external interference on the entire 360° periphery of mated connectors. (Fig.1, 2)

2. Low-Profile

A board-to-board distance of 1.5mm combined with reduced mounting areas allow for use in space-limited applications. (Fig.3)

3. Self alignment

Built-in self-alignment feature in the plug and receptacle allows mating / un-mating in limited spaces. (Fig.4)

4. Consistent mated retention force

Indents in the shield plates and contact configuration assure consistent, mated retention forces regardless of the number of contacts. A positive, tactile "click" confirms the fully mated state.

5. Solder wicking prevention

Nickel plating barrier on the contacts prevents solder compound intrusion (wicking) into the contact engagement areas.

6. High contact reliability

The narrow female contacts have a curved shape that acts like a spring, producing a long wipe length during mating and results in high contact reliability.

7. Pick-and-Place automatic mounting friendly

The compact, double shielded structure still provides enough area for vacuum pick-up machines when used in automated mounting methods. Receptacle: 0.8mm Header: 0.8mm

8. RoHS Compliant

All materials and substances used to produce this product comply with RoHS standards.

Washing Conditions

Organic solvent Washing

Solvent type	Room temperature washing	Heated washing		
IPA (Isoporopyl alcohol)	Yes	Yes		

Water Type Washing

When using water type cleaning agents (e.g., terpene, and alkali saponifiers), select the cleaning agent based on the documentation issued by the various manufacturers of cleaning agents which describes the effects on metals and resins. Be careful that parts are not left with moisture remaining on them.

Washing Precautions

Residual flux or cleaning agent on the contacts when washing with organic solvents or water type cleaners can give rise to the deterioration of electrical performance. In this regard it is important to check whether a thorough washing has been performed.

Handling Precautions when mating mounted connectors.

Handling Precautions when un-mating

Technical Documentation

Shielding Characteristics (1) (Measurement Results Using a 2-Chamber Shielded Room)

Explanatory Note

Measurement values of the unshielded connectors were set as the zero level of the vertical axis of the graph. The graph uses unshielded connectors as the reference and indicates the noise leakage suppression (shielding) effect of the shielded connectors as a relative comparison value.

In comparison to the unshielded connectors there was a noise suppression effect of 10 dB to 30 dB over the frequency range of 100 MHz to 3 GHz.

Shielding Characteristics (2) (Board-to-Board Shielding Comparison Using a Magnetic Field Probe Method: IEC 61967-6 Compliance)

Explanatory Note

A signal of the 266 MHz operating frequency was transmitted through all contacts, over a frequency range of 10 MHz to 3 GHz. The magnetic field leaking to the surroundings from the gap between the boards was measured with a magnetic probe to provide the (mapping data) results.
