# Interface Connectors for Factory Automation Network

HR31 Series

### Complies with DeviceNet requirements

Comparison of plug heights
Hirose HR31
Other manufacturer's product
Other manufacturer's product

### Features

#### 1. DeviceNet Compliant

Conforms to requirements of Factory Automation Network DeviceNet standards. Hirose products are distinct from products of made others, as described below.

Feature	Made by others	Hirose HR31
Reduced number of termination operations	Crimped to commercially available cap connectors, inserted into housing and fastened by screw. (*)	Crimped and connected to terminal then fastened simply by inserting into housing.
High density mounting	Plug height : 15 mm	Plug height is 10.2 mm, allowing use of less space when mounting several connectors
Prevention of connection errors	Contact positions not identified.	Permanently identified contact positions
Number of required operations to secure receptacle assembly to the board	Connectors are attached by screws from the opposite side.	No need for screws, built-in locking pin secures connector to the board

\*Although it is possible to terminate discrete cables with screws and not use a pin contact, however, there is the potential issue and concern for long-term reliability and problems. Therefore, most users prefer to use crimp contacts.

#### 2. Screw-lock style

The screw lock style connector features secure mating and a higher locking force retention.

#### 3. Snap-lock Style

The snap lock plug features a structure that creates a tactile click during mating.

#### 4. Commercially available tools may be used

Use crimp tools conforming to JIS C 9711 standards. Terminated contacts can be removed using 1 mm dia. steel pin. and re-inserted.

#### 5. Protected contacts

When installed, the crimped contacts are protected completely by the plug housing. This design eliminates the risk of damaging the contacts.

In cases where the application will demand a high level of reliability, such as automotive, please contact a company representative for further information.

### Product Specification

Rating	Current rating	12A (2.5mm² wire)     Operating te       10A (1.5mm² wire)     Operating te		emperature range	-40℃ to +100℃

#### Tools

Туре	Part No.	HRS No.
Manual crimp tool	HR31-TC-01	902-1512-4
Contact removal pin	HR31-SC-TP	150-0215-1

#### Tools application procedures

#### 1. Manual contact crimp tool

The tool will terminate all specified crimp contacts. Placement of correct contact in corresponding crimp position on the tool is critical. The positions are clearly indicated on the tool as (2) and (1.25). The exposed conductor strip length is 5mm.

Crimp position indicator	Applicable crimp contact
2	HR31-SC-111
1.25	HR31-SC-121

#### 2. Contact removal/extraction

Wiring errors can be corrected by removing the crimp contacts using the extraction tool and the following procedure.

- 1) Insert the extraction tool from the underside of connector and apply pressure onto the mold lance. (Fig.1)
- 2) While pressing on the mold lance, angle the extraction tool and release the disconnection prevention mechanism on the crimping contact. (Fig.2)
- 3) Remove the extraction tool.
- 4) Pull the wire rearward to disconnect and remove the contact.

### Usage Precautions

- 1. To prevent damage, align receptacle with the panel and board in such a way that it is not subject to excess loads.
  - 1.1 Recommended mounting panel dimensions (right angle through hole type)

1.2 Recommended mounting panel dimensions (straight through hole type)

#### 2. Insert the crimp contact into the plug in the direction shown below.

- 3. Use a number 0 cross drive bit to tighten the screw lock's screw.
- 4. Assure that the circuit's power is off when mating and un-mating connectors.

The characteristics and the specifications contained herein are for reference purpose. Please refer to the latest customer drawings prior to use. The contents of this catalog are current as of date of 12/2014. Contents are subject to change without notice for the purpose of improvements.
