## Precision Miniature Load Cell

#### **DESCRIPTION**

Model 34 precision miniature load cells measure both tension and compression load forces of 1000 g to 1000 lb. These models are our highest accuracy, rugged miniature load cells. Model 34's welded, stainless steel construction is designed to eliminate or reduce to a minimum, the effects of off-axis loads. (The internal construction assures excellent long-term stability for ranges 1000 grams and above.) A modification permits this model to be completely welded for underwater applications.

The Model 34 tension/compression load cell has female threads attachments. High accuracies of 0.15 % to 0.25 % full scale are achieved. Each bonded strain gage unit is built of welded 17-4 PH stainless steel for additional ruggedness. All load cells with ranges from 1 kg to 10 lb have an electrical balance module in the lead wire (approximately 1 in x .087 in thick). This balance module does not have to be the same temperature as the transducer.

#### **NOTES**

- Allowable maximum loads maximum load to be applied without damage.<sup>2</sup>
- Without damage loading to this level will not cause excessive zero shift or performance degradation. The user must consider fatigue life for long term use and structural integrity. All structurally critical applications (overhead loading, etc.) should always be designed with safety redundant load paths.
- Standard calibration for tension/compression load cells is in tension only.
- 4. Option 53e and 53t are external in-line interfaces.
- 5. Availability varies with range.
- 6. This unit calibrated to Imperial (non-Metric) units.
- 7. Not available with 500 g range.
